<i>Preface</i>	<i>v</i>
<i>Acknowledgements</i>	<i>vii</i>
Chapter 1 Introduction to Pharmaceutical Chemistry of Natural Products	1
■ Introduction	1
■ Drug Discovery from Natural Products	2
● Nomenclature	3
● Classification of Natural Products	3
● Identification of Natural Products	6
● Techniques Involved in Natural Product Lead Discovery	6
● Natural Products as Pharmacological Tools	8
Chapter 2 Carbohydrates	11
■ Introduction	11
■ Classification of Carbohydrates	12
■ Qualitative Chemical Tests for Carbohydrates	14
■ Monosaccharides	16
● Configuration of Monosaccharides	16
● Ascending and Descending in Monosaccharides	18
● Chemical Reactions of Monosaccharides	20
● Ring Size of Monosaccharides	27
➢ Ring structure of aldoses (glucose)	28
➢ Ring structure of ketoses (fructose)	39
● Conformations of Monosaccharides	42
● Monosaccharides of Pharmaceutical Importance	42
➢ Glucose	42
➢ Fructose	44
■ Disaccharides	47
● Biological Importance of Disaccharides	47
● Classification and Nomenclature of Disaccharides	47
● Determination of the Structure of Disaccharides	49

● Disaccharides of Pharmaceutical Importance	49
➢ Sucrose	49
➢ Lactose	53
➢ Maltose	55
➢ Trehalose	59
■ Trisaccharides	60
● Gentianose	60
■ Tetrasaccharides	61
● Stachyose	61
■ Polysaccharides	62
● Classification and Nomenclature of Polysaccharides	62
● Polysaccharides of Pharmaceutical Importance	63
➢ Starch	63

Chapter 3	Glycosides	73
■ Introduction		73
■ Classification of Glycosides		74
■ Qualitative Chemical Tests for Glycosides		80
■ Isolation of Glycosides		81
■ Structural Determination of Glycosides		82
■ Glycosides of Pharmaceutical Importance		83
● Salicin		83
● Ruberythric acid		84
● Arbutin		86
● Sinigrin		88
● Amygdalin		89

Chapter 4	Amino Acids, Peptides and Proteins	93
■ Amino Acids		93
● Nomenclature of Amino Acids		94
● Qualitative Chemical Tests for Amino Acids		94
● Classification of Amino Acids		95
● Isolation and Separation of Amino Acids from Proteins		96
● Synthesis of Amino Acids		97
● General Physical and Chemical Properties of Amino Acids		102
■ Peptides		110
● Classification of Peptides		111
● Synthesis of Peptides		111
● General Principles of Peptide Synthesis		112
● General Methods of Peptide Synthesis		115
● Structure of Peptides		117
➢ N-Terminal (Amino-end) degradation		118
➢ C-Terminal (Carboxyl-end) degradation		120
■ Proteins		122
● Biological Functions		122
● Classification of Proteins		122

● Qualitative Chemical Tests for Proteins	124
● Structure of Proteins	125
● Proteins of Pharmaceutical Importance	132
➤ Glutathione	132
➤ Oxytocin	135
➤ Thyroxine	138
➤ Insulin	142

Chapter 5 Alkaloids 149

■ Introduction	149
■ Nomenclature of Alkaloids	150
■ Classification of Alkaloids	150
■ Qualitative Chemical Tests for Alkaloids	158
■ Isolation or Production of Alkaloids	159
■ Determination of Molecular Structure of Alkaloids: General Methods	160
● Molecular Formula Determination	160
● Hydrolysis	160
● Determination of Unsaturation	160
● Functional Group Determination	160
● Degradation of Alkaloids	164
● Physical Methods in Conjunction with Chemical Methods	169
● Synthesis	170
■ Alkaloids of Pharmaceutical Importance	170
● Atropine	172
● Morphine	177
● Quinine	186
● Papaverine	194
● Emetine	199
● Ephedrine	205
● Ergotamine	207
● Reserpine	214
● Strychnine	222
● Colchicine	232
● Piperine	238
● Nicotine	240

Chapter 6 Steroids and Hormones 249

■ Steroids	249
● Nomenclature of Steroids	251
● Stereochemistry	253
● Qualitative Chemical Tests for Steroids	254
■ Sterols	254
● Cholesterol	255
● Lanosterol	256
● Stigmasterol	257
● Ergosterol	257

● Miscellaneous Sterols	258
● Structural Elucidation of Cholesterol	258
■ Bile acids	268
● 5 β -Cholanic Acid	270
● 5 α -Cholanic Acid	271
● Functions of Bile Acids	271
■ Saponins and Sapogenins	272
● Steroidal Saponins	272
● Synthesis of Diosgenin	274
● Pentacyclic Triterpenoid Saponins	276
■ Steroidal Alkaloids	277
■ Cardiac Steroids or Cardiotonic Glycosides	278
■ Hormones	282
● Classification	283
■ Sex Hormones	283
● Biosynthesis of Sex Steroid Hormones	284
■ Androgens (Male Sex Hormones)	285
● Biological Activities of Androgens	285
● Therapeutic Uses of Anabolic Androgenic Steroids	286
● Androgens of Pharmaceutical Importance	286
➢ Androsterone	286
➢ Dehydroepiandrosterone	288
➢ Testosterone	289
➢ Methyl Testosterone	292
➢ Fluoxymesterone	292
● SAR of Androgens	293
■ Oestrogens	295
● Isolation of Oestrogens	296
● Biological Activities of Oestrogens	296
● Metabolism of Oestrogens	297
● Therapeutic Uses of Oestrogens	297
● Classification of Oestrogens	298
● Oestrogens of Pharmaceutical Importance	300
➢ Oestrone	300
➢ Oestriol	301
➢ Oestradiol	303
➢ 17 α -Ethinyloestradiol	305
● Chemical Relationship Between Oestrone, Oestriol and Oestradiol	306
● Nonsteroidal Oestrogens or Artificial Hormones	308
➢ Stilboesterol	308
➢ Hexoestrol	310
➢ Dienoestrol	310
➢ Benzoestrol	312
● Structure–Activity Relationship (SAR) of Oestrogens	313
■ Corpus Luteum Hormones or Gestogens or Progestins	315
● Metabolism of Progesterone	316

● Biological Activities of Progestins	316
● Therapeutic Uses of Progestins	316
● Classification of Progesterones	317
● Progestins of Pharmaceutical Importance	318
➢ Progesterone	318
➢ Progesterone derivatives	322
● Structure–Activity Relationship (SAR) of Progesterones	324
■ Hormonal Contraceptives	326
● Oral Contraceptives	326
■ Corticosteroids (Adrenal Cortical Hormones)	327
● Biological Effects of Glucocorticoids	327
● Biosynthesis of the Adrenocorticoids from Cholesterol	328
● Therapeutic Uses of Glucocorticoids	329
● Classification of Corticosteroids	330
● Corticosteroids of Pharmaceutical Importance	333
➢ Cortisone	333
➢ Cortisol (or) Hydrocortisone	334
➢ Aldosterone	337
➢ Prednisolone	338
➢ Dexamethasone	340
● SAR of Corticosteroids	341

Chapter 7	Terpenoids	349
■	Introduction	349
■	Isolation of Terpenoids	352
■	Classification of Terpenoids	353
■	Isoprene Rule and Special Isoprene Rule	361
■	General Methods for the Elucidation of Structure of Terpenoids	363
■	Hemiterpenoids	366
■	Monoterpenoids or Terpenes	367
●	Acyclic Monoterpenoids	367
➢	Citral	367
➢	Citronellal	371
➢	Citronellol	373
➢	Geraniol	374
➢	Nerol	376
➢	Linalool	377
➢	Myrcene	378
➢	Ocimene	378
➢	Lavundulol	378
●	Cyclization Reactions of Acyclic Monoterpenoids	379
●	Monocyclic Monoterpenoids	381
➢	Limonene	381
➢	α -Terpineol	384
➢	1,8-cineol	389
➢	Menthol and Menthone	390

> Pulegone	392
> Carvone	393
> Ionones	397
● Bicyclic Monoterpenoids	399
> α -Pinene	399
> Camphor	404
> Borneol and Isoborneol	409
> Camphene	410
> Fenchone	410
■ Sesquiterpenoids	410
● Acyclic Sesquiterpenoids	410
> Farnesol	411
● Monocyclic Sesquiterpenoids	413
> Zingiberene	414
● Bicyclic Sesquiterpenoids	417
> Cadinene	417
● Miscellaneous Sesquiterpenoids	418
> Artemisinin	418
> Gossypol and related compounds	418
■ Diterpenoids	419
● Phytol	419
● Vitamin A	419
● Abietic Acid	420
● Ginkgolides	420
● Taxol	420
■ Triterpenoids	421
● Squalene	421
● Lanosterol and Euphol	422
● Amyrins	422
■ Tetraterpenoids	422
■ Polyterpenoids	423
Chapter 8	Flavonoids
■ Introduction	427
■ Isolation of Flavones	428
■ Structural Elucidation of Flavones	429
■ Flavonol	431
■ Structural Elucidation of Flavonol	432
■ Quercetin	434
■ Structural Elucidation of Quercetin	434
■ Isoflavones	437
■ Structural Elucidation of Isoflavones	438
Chapter 9	Vitamins
■ Introduction	441

■ Nomenclature of Vitamins	442
■ Classification of Vitamins	443
■ Sources of Vitamins and Their Deficiency Diseases	445
■ Vitamin A	446
■ Vitamin D	463
■ Vitamin E (Tocopherols)	474
■ Vitamin K	490
■ Vitamin B Complex	503
● Vitamin B ₁	503
● Vitamin B ₂	514
● Vitamin B ₃	526
● Vitamin B ₅	533
● Vitamin B ₉ or Vitamin B _c or Folic Acid	540
● Vitamin B ₆ or Pyridoxine	548
● Vitamin B ₁₂ (Cyanocobalamin)	560
■ Vitamin C (Ascorbic Acid)	571
■ Vitamin-Like Compounds	588
● PABA	588
● Choline	588
● Carnitine	589
● Lipoic Acid or Vitamin B _t	590

Chapter 10 Antibiotics **593**

■ Introduction	593
● Historical Background	594
● Spectrum of Activity of Chemotherapeutic Agents	594
● Classification Based on Mechanism of Action	596
● Classification Based on Chemical Structure	597
■ Penicillins	597
● Introduction	597
● Nomenclature	598
● Production of Penicillins	598
● Isolation of Penicillins	599
● Chemical Degradation of Penicillins	600
● Structural Elucidation of Penicillins	601
● Classification	606
● Structure–Activity Relationship (SAR) of Penicillins	610
■ Cephalosporins	611
● Introduction	611
● Nomenclature	612
● Degradation of Cephalosporins	613
● Structural Elucidation of Cephalosporins	614
● Classification of Cephalosporins	619
● Adverse Effects of Cephalosporins	623
● Uses of Cephalosporins	623
● SAR of Cephalosporins	623

■ Aminoglycoside antibiotics	625
● Introduction	625
● Production of Streptomycin	625
● Isolation of Streptomycin	626
● Streptomycin and Dihydrostreptomycin	626
● Structural Elucidation of Streptomycin	627
● Gentamycins	633
● Neomycin	633
● Kanamycin	634
● Amikacin	635
● Tobramycin	635
● Netilmicin	636
● SAR of Aminoglycoside Antibiotics	636
■ Tetracyclines	637
● Introduction	637
● Classification of Tetracyclines	638
● Structural Elucidation of Oxytetracycline	640
● SAR of Tetracyclines	647
■ Chloramphenicol or Chloromycetin	649
● Introduction	649
● Structural Elucidation of Chloramphenicol	650
● SAR of Chloramphenicol	653
■ Polypeptide antibiotics	654
● Introduction	654
● Bacitracin	654
● Polymyxin	655
■ Lincomycins	655
Chapter 11 Purines, Pyrimidines and Nucleic Acids	659
■ Introduction	659
■ Purines	659
● Classification of Purines	660
● Purine	661
● Adenine	664
● Guanine	666
● Uric Acid	667
● Xanthine	673
● Methylxanthines	674
➢ Caffeine	675
➢ Theobromine	678
➢ Theophylline	680
● Hypoxanthine	682
● Relationship Between Uric Acid and Xanthine Bases	683
■ Pyrimidines	684
● Uracil	684
● Thymine	686
● Cytosine	687

● 5-Methyl Cytosine	688
● 5-Hydroxy Methyl Cytosine	689
■ NUCLEIC ACIDS	690
● Classification of Nucleic Acids	690
● Functions of Nucleic Acids	691
● Components of Nucleic Acids	691
● Nucleosides	692
● Nucleotides	694
● Structural Elucidation of Nucleic Acids	696
● Internucleotide Bond in RNA	713
● Internucleotide Bond in DNA	714
● Structure of DNA	715
● Structure of RNA	719
● Types of RNA	720
● Differences Between DNA and RNA	722

Chapter 12 Enzymes	725
■ Introduction	725
■ Nomenclature and Classification of Enzymes	726
● Oxidoreductase	727
● Transferase	727
● Hydrolase	728
● Lyase	728
● Isomerase	728
● Ligase	729
■ Qualitative Chemical Tests for Enzymes	729
■ Chemical Nature of Enzymes	730
■ Efficiency of Enzymes	730
■ Specificity of Enzymes	731
● Stereospecificity or Optical Specificity	731
● Reaction Specificity	732
● Substrate Specificity	732
■ Theories of Enzyme Action	732
● Lock and Key Model	733
● Induced Fit Theory	733
● Substrate Strain Theory	734
■ Mechanism of Enzyme Action	734
■ Coenzymes	735
■ Enzymatic Catalysis	738
● Catalysis by Proximity and Orientation	738
● Acid–Base Catalysis	738
● Catalysis by Strain	739
● Covalent Catalysis	739
■ Enzyme Inhibition	740
● Reversible Inhibition	741
● Irreversible Inhibition	743

Chapter 13	Lipids	745
■	Introduction	745
■	Classification of Lipids	746
■	Simple Lipids (Fats and Oils)	747
●	Differences Between Fats and Oils	747
●	Nomenclature of Fats	748
●	Extraction of Fats	749
●	Physical and Chemical Properties of Fats and Oils	749
●	Analysis of Oils and Fats	751
●	Fatty Acids	754
●	Nomenclature of Fatty Acids	754
●	Classification of Fatty Acids	755
●	Waxes	757
●	Common Waxes	757
■	Compound Lipids/Complex Lipids	758
●	Lecithins	758
●	Cephalins	759
●	Plasmalogens	759
●	Sphingomyelins	760
●	Glycolipids, Galactolipids and Cerebrosides	760
■	Derived Lipids	761
●	Sterols	762
●	Cholesterol	762
●	Lanosterol	762
●	Stigmasterol	763
●	Ergosterol	763
	Index	765
