Foreword by AV Saha *vii*
Preface to the Third Edition *ix*
Preface to the First Edition *xi*

12. Structure, Bonding and Properties of Ionic Solids and Solid State Chemistry **1**

12.1 Characteristic Properties of Ionic Compounds **1**

12.2 Different Types of Ions and Electronic Configurations of the Ions Involved in Ionic Bonding **4**

12.3 Electron Density (ED) Maps and Ionic Radii **5**
Ionic Radii from X-Ray Electron Density Maps; Ionic Radii from Other Methods; Shannon's Crystal Radii; Comparison among Shannon's Crystal Radii, Goldschmidt's Radii and Pauling's Radii

12.4 Factors Affecting the Ionic Radii **12**

12.5 Energetics of Ionic Bond Formation: Born-Haber Cycle **16**
Born-Haber Cycle for Ionic Bond Formation; Drawbacks in the Concept of Born-Haber Cycle for the Ionic Lattice; Factors Favouring the Formation of Ionic Bonds

12.6 Application of Born-Haber Cycle **23**

12.7 Theoretical Aspects of Crystal Forces: Lattice Energy of Ionic Crystals **33**
Born-Lande Equation of Lattice Energy; Verification of the Born-Lande Equation; Modification of the Born-Lande Equation; Kapustinskii Equation; Factors Affecting the Lattice Energy; Hardness of Ionic Compounds

12.8 Radius Ratio Rule and Pauling's Rules: Preferred Structures of Ionic Compounds **45**
Limiting Radius Ratios for Some Common Geometries; Application of the Radius Ratio Rule; Limitations of the Radius Ratio Rule; Pauling's Rules and Stability of Ionic Crystals and Minerals

12.9 Some Basic Crystal Geometries (*i.e.* Unit Cells) Involved in the Structure of Crystalline Solids **71**
Lattices, Crystals and Unit Cells in Crystallography: Crystal Systems and Bravais Lattices; Simple Cubic (sc) Unit Cell; Body Centred Cubic (bcc) Unit Cell; Face Centred Cubic (fcc) Unit Cell; Plan View of the Three Bravais Lattices of Cubic System; Lattice Planes and Interplanar Distances and the Crystal Directions for the Cubic Systems; Bragg's Law of Diffraction and Determination of Crystal Structure by X-Ray Diffraction and Studies of Crystal Surface; Diamond Cubic (dc) Unit Cell; Graphite Layer Lattice; Close Packing Models of Spheres; Hexagonal Close Packing (hcp) — Characteristic Features; Cubic Close Packing (*ccp*) — Characteristic Features; Mixed Type Structure Arising from Combination of the *hcp* and *ccp* Structures; The Body Centred (*bcc*) Lattice in Terms of Close Packing of Spheres; Comparison of the Characteristic Features of *hcp*, *fcc* and *bcc* Structures; Structural Types of Crystalline Inorganic Solids in Terms of Hexagonal Close-Packing (*hcp*) and Cubic Close-Packing (*ccp*) of Ions; The Major Structural Types of Crystalline Inorganic Solids; Effect of the Nature of the Bridging Site (*i.e. B*) and the Central Site (*i.e. A*) on the Polymeric Crystal Structure of Solid

12.10 Structure of Ionic Crystals **112**
Structure of Ionic Crystals of AB Type; Structure of Ionic Crystals of AB_2 Type; Structure of Ionic Crystals of AB_3 Type; Structure of Ionic Crystals of A_2B_3 Type: Corrundum (α-Al_2O_3)

(6:4 Coordination Crystals); Structure of Ionic Crystals Consisting of Polyatomic Ions; Comparison of the Basic Ionic Crystals

12.11 Structure of Mixed Metal Oxides **128**
The Spinel and Inverse Spinel Structure; The Ilminite Structure ($FeTiO_3$); The Perovskite Structure ($CaTiO_3$) Represented by ABO_3; The Potassium Tetrafluoridonickelate(II) (K_2NiF_4) Structure (known also as K_2MgF_4 Structure) and Ruddlesden–Popper (RP) Phases; Mixed Oxides – Coloured Minerals and Gem Quality Crystals

12.12 Crystal Structure in Relation to Superconductivity and Ferroelectric Property **142**
$BaTiO_3$ (*BTO*); $YBa_2Cu_3O_{7-x}$ (*YBCO*, 123 Compound)

12.13 Deviations from Simple Ionic Structures **146**
Layer Lattices (*i.e.* Two Dimensional Lattices); Chain Lattices (*i.e.* One Dimensional Lattices)

12.14 Structure of Silicates and Isopoly and Heteropoly Acids: Representative Examples of Complex Ionic Crystals **151**
Chemistry of Silicates; Cement; Isopoly and Heteropoly Acids

12.15 Crystal Defects in Ionic Solids **163**
Stoichiometric (*i.e.* Intrinsic) Defects; Nonstoichiometric (or Berthollide) (*i.e.* Extrinsic) Defects; Defect Cluster (Koch–Cohen Cluster) in Wustite ($Fe_{1-x}O$)

12.16 Magnetic Materials: Magnetic Properties **179**
Terminology in Describing the Magnetic Properties and Different Units; Classification of Magnetic Substances; Cooperative Magnetism – Antiferromagnetism, Ferrimagnetism, Canted Magnetism and Ferromagnetism; Magnetic Properties of Metals; Molecular Magnets and Single-Molecule Magnets (SMM); Temperature Dependence of Magnetic Susceptibility of Different Types of Magnetic Materials

12.17 Properties of Ferroelectric, Pyroelectric and Piezoelectric Materials **193**
Ferroelectric Materials (Ferroelectric and Paraelectric States) and Pyroelectric Materials; Piezoelectricity and Piezoelectric Materials

12.18 Carbides **198**

12.19 Glasses and Glass Transition **199**

12.20 Structure of Liquids and Liquid Crystals: General Aspects: Hole Theory of Liquids **200**

12.21 Different Types of Solids and Studies of Solids by Different Instrumental Techniques **146**
Classification of Solids in Terms of Structural Viewpoint: Amorphous and Crystalline Solids; Studies of Solids by Different Instrumental Techniques

Solved Numerical Problems **210**

Exercise XII **219**

13. Bonding in Metals and Metal Clusters: Electrical Conductivities of Solids: Semiconductors and Superconductors **228**

13.1 General Properties of Metals **228**

13.2 Crystal Structure of the Metals and the Effects of Lattice Structure on Their Properties **229**
Crystal Structure of the Metals; Effects of the Crystal Structure on the Properties of Metals

13.3 The Free Electron Theory of Metallic Bonding **236**
Drude–Lorentz Classical Free Electron Theory in Terms of Maxwell–Boltzmann Distribution Law: Electron Sea Model Obeying the Maxwell–Boltzmann Distribution Energy; Sommerfeld's Quantum Mechanical Free Electron Theory and Fermi Dirac Distribution Function; Quantitative Aspects of Some Properties of Metals; Electrical Conductivity and Hall-Effect

13.4 The Bloch Theory (*i.e.* Zone Theory) of Metallic Bonding **253**
Basic Concepts of Bloch Theory; Brillouin Zone, Forbidden Zone and Conductivity

13.5 Molecular Orbital Theory or Band Theory (Tight Binding Model) of Metallic Bonding **258**
Formation of Energy Bands and Brillouin Zones; Band Structure of Nontransition Metals; Band Structure of Transition Metals; Valence and Conduction Bands; Explanation of Electrical Conductivities of Solids in the Light of Band Theory; Optical Properties of Solids in the Light of Band Theory; Magnetic Properties Including the Temperature Independent Paramagnetism (TIP) (*i.e.* Pauli Paramagnetism) of the Metals in Terms of Band Theory; Ferromagnetism in Transition and Inner-Transition Metals; Band Structure of Some Inorganic Solids and their Properties

13.6 Valence Bond Approach of Metallic Bonding **282**
Valence Bond Approach for the Short Period Metals; Valence Bond Approach for the Long Period Metals; Merits of the Valence Bond Approach of Metallic Bonding; Demerits of the Valence Bond Theory

13.7 Solid Solutions: Alloys: Intermetallic Compounds: Zintl Phase and Zintl Anions **284**
Interstitial Alloys; Substitutional Alloys, Intermetallic Compounds and Hume-Rothery Rule; Zintl Phases and Zintl Anions

13.8 Metal-Metal Bonds in Metal Clusters **290**
Binuclear Clusters; Trinuclear Clusters; Octahedral Clusters; Chevrel Phase–Octahedral Metal Cluster; Carbonyl Clusters; Metalloid and Metal-only Clusters (Zintl Cluster Ions); Metal-Metal Bonds in Stacked Polymeric Structure; Conditions for Metal-Metal Bonding

13.9 Semiconductors and their Properties in the Light of Band Theory **314**
Characteristic Features of Intrinsic Semiconductors; Characteristic Features of Extrinsic or Doped Semiconductors; Temperature Dependence of Semiconductor Conductivity; Optical Properties of Solids: Uses of Semiconductors: Direct and Indirect Gap Semiconductors; Some Useful Semiconductor Materials and their Properties; Characteristics of *p-n-p* and *n-p-n* Junction Transistors; Some Applications of Semiconductor Devices

13.10 Semiconductivity and Metallic Conductivity of Metal Oxides: Hopping Mechanism of Conductivity **343**

13.11 Electrical Conductivity in One Dimensional Solids: Peierls Distortion **348**
Electrical Conductivity in KCP (Potassium Tetracyanoplatinate(II)] and Peierls Distortion; Electrical Conductivity in Polythiazyl $(SN)_x$, (*i.e.* $^{1}_{\infty}[SN]$, a One Dimensional Metal); Electrical Conductivity in *trans*-Polyacetylene $(C_2H_2)_x$ or $(CH)_x$ – an Organic Semiconductor

13.12 Conducting Organic Substances: Organic Metals, Organic Semiconductors, Molecular Inorganic Superconductors **354**
Introduction; Some Representative Examples of Organic Salts as Conducting Substances: Organic Superconductors

13.13 Superconductivity **357**
Concept of Superconductivity; Characteristic Features of Superconducting Materials; BCS Theory of Superconductivity; Superconducting Materials; Structural Features of Some *Cu*-Containing Superconducting Ceramic Materials (Warm Superconductors); Application of Superconductivity

13.14 Electrical Conductivity of Solid Electrolytes **370**

Solved Numerical Problems **375**

Exercise XIII **380**

14. Acids and Bases and Ionic Equilibria in Aqueous Solutions **388**

14.1 Definitions of Acids and Bases **388**

14.2 Arrhenius Theory of Acids and Bases **388**

14.3 Brönsted-Lowry Concept: The Proton Donor-Acceptor Concept: Protonic Concept: The Conjugate Acid-Base Theory **389**

Basic Concepts of Brönsted-Lowry Theory; Relative Strength of Acids and Bases: Differentiating and Levelling Solvents in the Light of Brönsted-Lowry Concept; Merits of the Brönsted-Lowry Concept; Limitations of the Brönsted-Lowry Concept; Cosolvating Agents and Acid-Base Strength; Application of Brönsted-Lowry Concept in Calculating pH of Aqueous Solutions: A Generalised Approach to Calculate the pH Values of Different Types of Aqueous Solutions; Acid-Base Behaviour of Amino Acids in Aqueous Solution: Isoelectric Point and Isoionic Point; The Chemistry of Proton in Water: Proton Transport Process by Grotthus Hop-Turn Mechanism

14.4 Mechanism of Buffer Action: Buffer Capacity **419**

14.5 Selection of Acid-Base Indicators in Acid-Base Titrations **421**

14.6 Hammett Acidity Function: Superacids **432**

Concept of Hammett Acidity Function (H); Concept of Superacids and Examples of Superacids; Application of Superacids

14.7 The Lewis Concept: The Electron Pair Donor-Acceptor System: The Electrophile-Nucleophile Approach (Ingold–Robinson) **436**

Basic Concepts and Characteristic Features of the Lewis Theory; Different Types of Lewis Acids; Classification of the Lewis Bases; Lewis Acid-Base Reactions and Redox Reactions; Some Typical Examples of Lewis Acids and Bases, Lewis Acid-Base Adducts; Covalent and Ionic Contributions in the Stabilities of the the Adducts: Drago–Wayland Equation; Merits and Demerits of Lewis Acid-Base Theory; Solvent Properties in the Light of Lewis Acid-Base Concept: Donor Number (DN) and Acceptor Number (AN) (Gutmann Concept); Change of Bond Length in Lewis Acid–Base Interaction: Gutmann Rule

14.8 Strength of Brönsted (*i.e.* Protonic) Acids and the Governing Factors Involved and the Properties of Brönsted Acids and Bases **472**

Strength of Different Protonic Acids and Conjugate Acids of Some Bases; Born-Haber Cycle and Thermodynamic Parameters to Determine the Acid Strength: Acid Strength of Hydracids and Carboxylic Acids: Gas Phase Acidity; Factors Governing the Strength of Oxyacids; Hydrolysis and Aqua Acid Strength of Metal Ions in the Light of Brönsted-Lowry Concept; Basicity of Anions; Periodic Variation of Acidic and Basic Characters; Nucleophilicity and Basicity; Acid-Base Catalysis

14.9 Some Important Factors Governing the Acid-Base Strength (Both Brönsted and Lewis Acid-Base Systems) **499**

Inductive Effect: Entropic Effect: *d*-Orbital Participation; State of Hybridisation of the Central Atom; Steric Factors: *F*-Strain and *B*-Strain; Solvation Effects; Resonance and π-Bonding and the Possibility of *d*-Orbital Participation in the Reacting Species; Effect of Resonance Stabilisation in the Product; Effect of *H*-Bonding on Acid Strength

14.10 Lux-Flood Concept **532**

14.11 Solvent System Definition **534**

14.12 Usanovich Concept **538**

14.13 A Generalized Concept of Acids and Bases **538**

14.14 Concept of Ultimate Acids and Bases **539**

14.15 Hard and Soft Acids and Bases (HSAB) **539**

Basic Concept and Principle of Hard and Soft Acids and Bases (HSAB) Theory; Basis of Classification of the Acids and Bases as Hard or Soft; Characteristics of Hard and Soft Species; Symbiosis in Hardening or Softening a Centre; Acid-Base Strength versus HSAB Principle; Application of HSAB Principle; Theoretical Background of HSAB Principle

14.16 Surface Acids and Solid Acids: Heterogenous Acid-Base Reactions **564**

14.17 Aqueous Solutions of Salts: Hydrolysis of Salts: Solubility Product of Sparingly Soluble Salts **566**

Hydrolysis of Salts; Solubility Product and Activity Product of Sparingly Soluble Salts; Application of the Principle of Solubility Product; Formation of Precipitates (*i.e.* Precipitation): Coagulation of Hydrosols by Electrolytes and Peptisation of Precipitates; Factors Determining the Particle Size of the Precipitates: Supersaturation Level, Digestion (Ostwald Ripening), Homogeneous Precipitation

Solved Numerical Problems **593**

Exercise XIV **622**

Appendix 14A **641**

Activity, Activity Coefficient and Concentration of Solutions

Bibliography **B1–B2**

Appendices **A1–A10**

Appendix I: Units and Conversion Factors **A1**

Appendix II: Some Physical and Chemical Constants **A4**

Appendix III: Wavelength and Colours **A5**

Appendix IV: Names, Symbols, Atomic Numbers and Atomic Weights of the Elements **A6**

Appendix V: Some Useful Mathematical Relationships **A8**

Index **I1–I10**
