Contents

Foreword iii

Preface to the Fourth Edition v

1. Introduction 1

The Origin of Life 1
The Origin of Land Plants 2
The Beginnings of Agriculture 3
The Biosphere 3
The Turnover of Carbon 5
The Turnover of Nitrogen 5
The Beginnings of Soil Science 7
Selected References 9

2. Soil, the Natural Medium for Plant Growth 11

Soil in General 11
Physical Properties of Soil 12
Chemical Properties of Soil 15
Fixation of Ions in Soil 17
Soil Water 18
Soil Atmosphere 19
Methane Emissions from Lowland Rice Cultivation 19
Soil pH 20
Soil Structure 21
The Role of Organic Matter 21
Synthetic Soil Conditioners 22
In Relation to Root Growth 22
Evaluation of Soil Structure 23
Selected References 24

3. Soil Microorganisms 26

Development of Soil Microbiology 26
Significant Developments in Soil Microbiology 27
Biological Nitrogen Fixation 29
Bacteria 32
Cell Wall 36
Gram Stain 38

Actinomycetes 38
Fungi 39
Fungal Cell Structure 44
Myxomycetes 44
Algae 46
Protozoa 46
Bacteriophages 48
Fungal Viruses 49
Microscopy 49
Compound Light Microscope 52
Bright Field Microscope 54
Dark Field Microscope 54
Fluorescence Microscope 54
Ultraviolet (UV) Microscope 56
Phase Contrast Microscope 56
Electron Microscope (EM) 58
Scanning Electron Microscope 61
Confocal Microscopy 61
Methods Used in Soil Microbiological Studies 61
Sterilization Methods 61
Obtaining Soil Samples 63
Soil Dilution and Plate Counts 63
The Streak Plate 65
The Soil Plate 65
Enrichment Cultures 65
The Buried Slide 66
Immersion Plate and Tube 67
Direct Microscopic Examination of Soil 67
Fluorescent Staining 67
Chemical Methods to Determine Microbial Biomass 68
Soil Percolation Techniques 69
Soil Enzymes Estimation 69
Methods for Assaying Antibiosis 69
Isolation of Bacteriophages 72
Isolation of Algae 72
Isolation of Cyanophages 72
Glass Ring Method for Isolation of Protozoa 72
Determination of Most Probable Number (MPN) of *Nitrosomonas* 73
MPN for *Nitrobacter* 74
Soil Respiration 74
Molecular Methods in Soil Microbiology 74
Extraction and Purification of Nucleic Acid from Soil 75
DNA Hybridization 75

Amplification by Polymerase Chain Reaction 76
Detection and Identification of rRNA Genes 76
Amplified Length Polymorphism (AFLP) 78
Pulse-field Gel Electrophoresis (PFGE) 78
Selected References 79

4. The Rhizosphere and the Phyllosphere 82

The Rhizosphere 82
Rhizosphere Effect 85
Nitrogen Fixation in the Rhizosphere 86
Alteration of Rhizosphere Microflora 89
Associative and Antagonistic Activities in the Rhizosphere 89
Root Exudates 90
Fungistasis 91
Techniques 93
The Soil Dilution and Plate Count Method 93
The Soil Plate 93
The Soil Box 94
The Contact Slide Technique 94
Artificial Rhizosphere 95
Model Systems 95
The Use of Labelled Nutrients 95
Fluorescence Microscopy 95
Fluorescent Antibody 96
Techniques in the Collection of Root Exudates 97
Plant Growth Promoting Rhizobacteria 103
Siderophores 105
Genetic Manipulation 106
Integrated Approach 107
Commercialization of PGPRs 107
Novel Approaches (Biotechnology of the Rhizosphere) 108
The Phyllosphere 109
Biochemical Reactions in the Phyllosphere 109
Selected References 112

5. Nitrogen Fixation in Free-living and Associative Symbiotic Bacteria 116

Nitrogen-fixing Bacteria 116
Nitrogenase 118
Genetics 119
Mechanism of Nitrogen Fixation 124
Response of Plants to *Azotobacter* Inoculation 127
Nitrogen Fixation in the Root Zone of Rice 128

Nitrogen Fixation in the Rhizosphere of Grasses and Weeds (Associative Symbiosis) 132
Some New Nitrogen-fixing Bacterial Associations 133
Response of Plants to *Azospirillum* Inoculation 135
The Concept of C_4-dicarboxylic Acid Pathway 135
Nitrogen Fixation by *Rhizobium* in a Free-living State 137
Selected References 138

6. Nitrogen Fixation by Free-living Blue-Green Algae 141

General Aspects 141
Heterocysts 141
Algal Nitrogenase 146
Ammonia Assimilation 147
Genetics 148
Importance in Rice Cultivation 148
The Trough Method of Algal Production 149
The Pit Method of Algal Production 150
The Field Method of Algal Production 150
Limitations 150
Selected References 150

7. Nitrogen Fixation by Symbiotic Blue-Green Algae 152

Lichens 152
Stages in Lichen Re-establishment 154
Nitrogen Fixation and Assimilation 154
Blue-green Algal Association with Bryophytes 155
Blue-green Algal Association with Higher Plants 155
Azolla-Anabaena Associaton 160
Survival of *Azolla* 160
Limitations 163
Selected References 165

8. *Rhizobium* and Legume Root Nodulation 166

Leguminous Plants 166
The Discovery of Symbiotic Nitrogen Fixation 166
Rhizobium Classification 169
Cultural Characteristics 172
Genetics 173
Flavonoids Induce Nodulation 176
Novel Approaches to Extend Root Nodulation 178
Ecology 179
Infection 181
Lectins 185
Structure of the Nodule 189

Function of the Nodule 189
Nitrogenase-Hydrogenase Interrelationship 196
Stem Nodulating Legumes 197
Factors Affecting Nodulation 199
Temperature and Light 199
Combined Nitrogen 201
Hydrogen Ion Concentration 201
Mineral Nutrition 202
Growth Substances 203
Genetical Factors of the Host 204
Influence of Pesticides 205
Competition Problem 205
Rhizobiotoxin 207
Salinity and Alkalinity 207
Legume Inoculation 208
Yield Response to *Rhizobium* Inoculation in India 211
Some Common Methods Used in the Study of Legume Root Nodulation 211
Isolation of *Rhizobium* 211
Tests for Distinguishing from *Agrobacterium* 213
Tests for the Ability of *Rhizobium* Isolates to Nodulate 215
Determination of Total Nitrogen by Kjeldahl Method 219
Acetylene Reduction Technique 220
The Use of ^{15}N 220
Serology 221
Immunofluorescence (IF) 223
Antibiotic Resistant Markers 223
Enzyme-Linked Immunoabsorbant Assay (ELISA) 223
The Use of Marker Genes 225
PCR Fingerprinting of DNA 226
Nodulated Leguminous Trees 227
Selected References 228

9. Actinorhizal Plants (*Frankia*-Induced Nodulation) 233

Root Nodules Caused by *Frankia* (Actinorhizal Symbiosis) 233
Cross-inoculation Experiments 235
Isolation and Characteristics of *Frankia* 236
Cultural Characteristics of *Frankia* 238
Taxonomy of *Frankia* 238
Entry of *Frankia* to the Host Plant 240
Structure of Actinorhizal Nodule 241
Nitrogen Fixation and Assimilation 241
Field Experiments on the Benefit of *Frankia* Inoculation 245
Mycorrhizae and Actinorhizal Plants 245

Proteoid Roots 246
Genetics of *Frankia* 246
Rhizobium-induced Root nodulation of *Parasponia* 246
Leaf Nodules 248
Gymnosperm Nodules 249
Selected References 249

10. Organic Matter Decomposition 252

Degradation of Plant Residues 252
Humus 255
Humic Acids 257
Beneficial Role of Humic Acids 258
Mineralization and Immobilization Processes 259
Effects of Residues of Crops on Plant Growth 261
Soil Sickness 262
Composting 262
Vermicomposting 265
Green Manure 266
Anaerobic Decomposition of Organic Matter 266
Biogas 267
Degradation of Hydrocarbons 269
Selected References 270

11. Nitrification and Denitrification 271

Nitrification 271
Denitrification 273
Losses of Nitrogen by Non-biological Ways 274
Controlled Release Fertilizers and Nitrification Inhibitors 274
Selected References 276

12. Microbial Products Influencing Plant Growth 277

Indoleacetic Acid 277
Gibberellins 277
Cytokinins 279
Ethylene 279
Antibiotics 279
Mechanism of Antibiotic Action 282
Resistance to Antibiotics 283
Aflatoxin 283
Toxins in Plant Diseases 286
Bacterial and Fungal Insecticides 286
Virus Insecticides 287
Microbial Herbicides 288
Biological Control of Plant Diseases 289

Selected References 290

13. Sulphur, Phosphorus and Trace Element Nutrition 292

Sulphur 292
Phosphorus 293
Agronomical Aspects 298
Trace Elements 298
Manganese 299
Copper 300
Iron 300
Bioaccumulation and Mineral Leaching 301
Selected References 301

14. Biodegradation of Pesticides and Pollutants 303

Pesticides in General 303
Insecticides 304
DDT 305
BHC 305
Lindane 306
Aldrin, Dieldrin, Heptachlor, Endosulfan, Chlordane etc. 306
Malathion 307
Parathion 307
Diazinon 307
Herbicides 308
2,4-D 308
Simazine and Atrazine 309
Linuron 309
TCA and Dalapon 310
Chloropham 310
Dicamba 311
Dichlobenil (Casoron), Bromoxynil (Brominal) 311
Bentazon 311
Diquat and Paraquat 312
Fungicides 313
Thiram, Maneb, Ferbam, Nabam and Zineb 313
PCP, PCNB, Chloroneb etc. 313
Captan 314
Carboxin and Oxycarboxin 314
Benomyl (Benlate) 314
Streptomycin, Cycloheximide, Blasticidin-S, Terramycin 315
Fate of Pesticides in Soil (Biodegradation) 315
Bioavailability of Pesticides/Pollutants 321
Acceleration of Biodegradation 323
Bioremediation 324

Herbicides and Plant Disease 324
Selected References 326

15. Mycorrhizae 327

Fungal Symbioses with Roots 327
Ectomycorrhizae 327
Cultural Characteristics of Ectomycorrhizal Fungi 330
Absorption of Nutrients 330
Techniques of Ectomycorrhizal Inoculation 331
Resistance to Plant Diseases by Ectomycorrhiza 332
Endomycorrhizae of Orchids 333
Arbuscular Mycorrhiza (AM) 334
Isolation of AM Fungal Spores 334
Methods of AM Fungal Inoculation 338
Plant Response to AM Fungal Inoculation 339
Legume Arbuscular Mycorrhiza Interaction 339
Selected References 341

16. Biotechnology in Agriculture 342

The New Green Revolution 342
Nucleic Acids 346
Protein Synthesis 346
Southern and Northern Blot Techniques 348
Nucleic Acid Hybridization 350
Recombinant DNA Technology and Gene Cloning 350
Gene Exchange in Bacteria 353
The *Agrobacterium* Mediated Transfer of Genes 353
Procedures for *Agrobacterium* Mediated Transformations 357
Direct DNA-transfer Technologies 358
Antisense RNA Strategy 358
Frost Control Biotechnology 358
Virus Resistance in Transgenic Plants 360
Transformation of Sequences Related to Viral Capsid Protein 360
Transformation of Sequences Related to Viral Movement Protein 362
Resistance Conferred by Antisense RNA 362
Antibody-mediated Resistance 362
Resistance Due to Interferon Related Genes 363
Manipulation of Host Genes for Plant Protection 363
Risks and Benefits 363
Tolerance to Herbicides 364
Gene Protection Technology 365
Ecological Considerations in the Release of Transgenic Plants 367

Patents 369
Tissue Culture 370
Vaccines 372
Single Cell Protein 375
Biopesticides 376
Bacillus thuringiensis 377
Insect Viruses 380
Entemopathogenic Fungi 381
Biofertilizers 381
Bioconversion 382
Futurology 383
Selected References 386
Appendix 388
Index 405
