Preface

vii

1. INTRODUCTION TO PROBABILITY THEORY	1-34
1.0 Introduction	1
1.1 Introduction to Set Theory	1
Set	1
Representation of a Set	2
Finite and Infinite Sets	2
Countable and Uncountable Sets	2
Null Set or Empty Set or Void Set	2
Singleton Set (Singlet) and Cardinality	3
Equivalent Sets	3
Equal Sets	3
Universal Set	3
Subsets	3
Power Set	4
1.2 Some Theorems on Sets	4
1.3 Set Operations	4
1.4 Venn Diagrams	6
Representation of Venn Diagrams	6
1.5 Basics of Probability	8
Outcome	8
Random Experiment	8
Sample Space (S)	8
Event	9
1.6 Probability of an Event	11
The Relative Frequency Definition	11
The Classical Definition	11
Theorems of Probability	11
1.7 Mathematical Model of Experiments	14
1.8. Joint and Conditional Probability	14
Joint Probability	14
Conditional Probability	15
1.9 Statistical Independence	17
1.10 Total Probability and Baye's Theorem	17
Total Probability	17
Baye's Theorem	18
Examples	22
Exercise	33
2. RANDOM VARIABLE, DISTRIBUTION AND DENSITY FUNCTIONS	35-65
2.0 Introduction	35
2.1 Random Variables	35

2.2	Cumulative Distribution Function (CDF)	36
2.3	Probability Density Function (PDF)	40
2.4	Some Important Distribution and Density Functions	45
	Discrete Distributions	45
	Continuous Distributions	50
2.5	Conditional Distribution and Density Functions	56
2.6	Methods of Defining Conditioning Event	57
	Examples	58
	Exercise	64

3. OPERATIONS ON ONE RANDOM VARIABLE	66–94
---	--------------

3.0	Introduction	66
3.1	Expectation and Variance	67
	Properties of Expectation	67
	Expected Value of a Function of a Random Variable	68
	Conditional Expectation	69
3.2	Moments	70
	Moments About the Origin	70
	Moments About the Mean	70
3.3	The Markov and Chebyshev Inequalities	74
	Markov Inequality	74
	Chebyshev Inequality	75
3.4	Functions that Generate Moments	77
	Moment Generating Function	77
	Characteristic Function	78
3.5	Transformations of a Continuous Random Variable	80
	Monotonic Transformation of a Continuous Random Variable	81
	Nonmonotonic Transformation of a Continuous Random Variable	83
3.6	Transformations of a Discrete Random Variable	84
	Examples	85
	Exercise	94

4. MULTIPLE RANDOM VARIABLES	95–125
-------------------------------------	---------------

4.0	Introduction	95
4.1	Vector Random Variables	95
4.2	Joint Distribution Function	96
	Properties	96
4.3	Joint Density Function	98
	Properties	99
4.4	Conditional Distribution and Density	102
	Point Conditioning	102
	Interval Conditioning	103
4.5	Independence of Two Random Variables	103
4.6	Distribution and Density of Sum of Two or More Random Variables	105
	Sum of Two Random Variables	105
	Sum of N Random Variables	106
	Multiplication of Two Random Variables	106
	Division of Two Random Variables	107

4.7	Central Limit Theorem	109
	Examples	112
	Exercise	124
5.	OPERATIONS ON MULTIPLE RANDOM VARIABLES	126–148
5.0	Introduction	126
5.1	Expectation and Variance	126
5.2	Joint Moments	127
	Joint Moments About the Origin	127
	Joint Moments About the Mean	128
5.3	Functions that Generate Joint Moments	130
	Joint Moment Generating Function	130
	Joint Characteristic Function	131
	Joint Gaussian Random Variables	131
5.4	Transformations of Multiple Random Variables	136
	Single Function	136
	Multiple Functions	136
	Linear Transformations of Gaussian Random Variables	138
	Examples	140
	Exercise	147
6.	RANDOM PROCESSES: TEMPORAL CHARACTERISTICS	149–190
6.0	Introduction	149
6.1	Random Process	149
	Classification of Random Processes	150
	Deterministic and Nondeterministic Random Processes	152
6.2	Stationarity and Independence	153
	Distribution Functions	153
	Density Functions	153
	Statistical Independence	153
	Stationary Random Process	153
6.3	Correlation and Covariance Function	157
	Correlation	158
	Cross-correlation and Its Properties	160
	Covariance Functions	163
	Cross-covariance Function	163
	Discrete Time Processes and Sequences	164
6.4	Time Averages and Ergodicity	167
	Sample Function	167
	Time Averages	167
	Mean and Variance of the Time Averages Random Process	168
6.5	Ergodicity Principle	171
	Mean Ergodic Process	171
	Autocorrelation Ergodicity	173
6.6	Gaussian and Poisson Random Processes	176
	Gaussian Random Process	176
	Poisson Random Process	177
	Examples	181
	Exercise	189

7. RANDOM PROCESSES: SPECTRAL CHARACTERISTICS	191–222
7.0 Introduction	191
7.1 Power Density Spectrum and Its Properties	191
The Power Density Spectrum	192
7.2 Relation Between the Autocorrelation Function and PSD:	
Wiener–Khinchine Relation	196
7.3 Bandwidth of Power Density Spectrum	199
7.4 Cross Power Spectrum Density and Its Properties	200
Cross Power Spectrum Density	200
Properties of the Cross Power Density Spectrum	201
7.5 Relation Between the Cross-correlation and Cross Power Spectrum Density	204
7.6 Power Spectrum for Discrete Time Processes and Sequences	206
Discrete Time Processes	206
Discrete Time Sequence	207
Examples	209
Exercise	221
8. LINEAR SYSTEMS WITH RANDOM INPUTS	223–248
8.0 Introduction	223
8.1 Linear Systems with Deterministic Inputs	223
Linear System	223
Linear Time Invariant System	224
Linear Time Invariant System: Transfer Function	225
8.2 Linear Systems with Random Inputs	225
Mean Value of System Response	226
Mean Square Value of System Response	226
Autocorrelation Function of System Response	227
Cross-correlation Functions of Input and Output	228
8.3 Spectral Characteristics of System Response	229
Power Density Spectrum of Response	229
Cross Power Density Spectrums of Input and Output	229
8.4 Types of Random Process	230
Low Pass	231
Band Pass	231
Band Limited	232
Narrow Band	232
8.5 Modeling of Noise Sources	233
Noise in Communication Systems	233
Noise in Electrical Circuits	236
Noise Measurements	238
Noise Figure of Cascaded Stages	239
Examples	240
Exercise	246
<i>Appendices</i>	249–263
<i>References</i>	265
<i>Index</i>	267–268
