Foreword by BH Sripathi Rao
Foreword by M Vijayakumar
Preface to the Third Edition

vii Preface to the First Edition xiii
ix Colour Plates 1–16 between xxii and 1
xi Colour Plates 17–39 between 202 and 203

1. Orientation to Dental Science 1

History of Dentistry 1
Pre-historic Period 1
Medieval Period 1
Progress of Dentistry Since 1840–1900 2
Developments Since 20th Century 2
Orientation to Dentistry 3
Materials used in Dentistry 3
Special Approaches 3
Orientations to Dentistry (Scope for Study) 4
Hostile Oral Environments 4
Structure of Tooth 5
Physical Properties of Tooth 6
Conservative Dentistry 7
Need of Conservative Procedures 7
Stages of Tooth Decay and Principles of Restorations 7
Classification of Tooth Cavities 8
Specialities in Dental Sciences 9
Importance of Numerical Values of Compositions, Properties, etc. 10
ADA Specifications 11
ADA Acceptance Programme 11
International Standards 12
Importance of Learning Laboratory 12

2. General Properties of Matter 14

States of Matter 14
Materials used in Dentistry 15
General Properties 15
Interatomic Bonding 15
Crystal Structure 16
Amorphous (Non-crystalline) Structures 17
Mechanical Properties (Deformations) 17
Stress and Strain 18

Stress–Strain Relations 20
Elastic Deformation 20
Non-elastic Deformation 22
Determination of Mechanical Properties 25
Strengths of Materials 25
Dynamic Forces 29
Impact Strengths 30
Fatigue 30
Surface Hardness 31
Methods of Measurements of Surface Hardness 31
Surface Phenomena of Liquids 34
Cohesion (Surface Tension) and Adhesion (Wetting) 34
Surface Energy 35
Angle of Contact and Wetting 35
Adhesion 35
Rheological Properties—Viscosity 37
Viscosity 37
Viscoelasticity (Creep) 39
Theoretical Explanation for Viscoelastic Deformation (Option) 39
Thermal Properties 41
Heat of Fusion (Latent Heat) 41
Thermal Conduction 41
Thermal Diffusivity 42
Thermal Expansion 42
Colour Parameters and Colour Matching 43
Dispersion of Light 44
Colour Triangle: Primary, Secondary and Complementary Colours 44
Colour Pigments 44
Colour Parameters 44
Measurement of Colour Parameters 44
Factors Affecting Colour Matching 45
Colour Matching of Restorations with Tooth 46
Problems of Colour Matching 46

3. Impression Materials (Auxiliary Materials) 48

- Impression Materials 48
- Ideal Requirements of Impression Materials 48
- Classification of Impression Materials 50
- Impression Trays 51
- Non-elastic Impression Materials: Impression Compound 52
- Green Stick Compound 54
- Copper Tube Impression Technique/
Copper Ring Technique 55
- Type II Tray Compound/Impression Compound 55
- Zinc Oxide Eugenol Impression Pastes 55
- Types I, II, Setting Action 52
- Compositions, Properties 57
- Manipulation Techniques 58
- Modifications of ZnOE Impression Pastes 58
- Surgical and Bite Registrations 58, 59
- Hydrocolloids, Gelation, Properties 59–61
- Agar-agar Impression Material
(Reversible Hydrocolloids) 62
- Composition, Properties 62, 63
- Manipulation Procedure 63
- Wet-field Technique 64
- Alginate Impression Materials (Irreversible HC) 64
- Structure, Composition, Gelation 65
- Alginate Properties 66
- Manipulation 67
- Modified Alginates 68
- Common Causes for Failure 69
- Duplicating Materials 70
- Elastomers (Elastomeric Impression Materials) 71
- Classifications 71
- Polysulphide—Elastomer, Compositions 72
- Setting Action—Vulcanization 72
- Properties of Polysulphides 74
- Condensation Polysilicones 75
- Composition and Setting Action 75
- Properties 76
- Addition Polysilicones, Composition and
Setting Reaction 76, 77
- Properties 78
- Polyether Impression Materials 79
- Composition, Setting Reactions, Properties 79
- Properties of Elastomeric Impression Materials 80
- Manipulation of VLC Polyethers 80
- Impression Techniques 82
- Common Causes for Failures 84
- Measurements of Properties of Elastomers 84

4. Gypsum Products: Cast and Die Materials (Auxiliary Materials) 87

- Manufacturing Methods 88
- Setting Action, Setting Times 89
- Gilmore Needles, Vicat Penetrometers 90
- Controlling, Factors affecting Setting Times 91
- Normal and Hygroscopic Setting Expansions 92
- Strength of Gypsum Products 94
- Model, Short Notes on Types 1, 2, 3, 4, 5 95, 96
- Manipulation of Gypsum Products 97
- Die Materials 98
- Electroformed Dies 99
- Variations in Setting Times 100
- Resume of Gypsum Products 101

5. Dental Polymer—Resins 103

- Polymerization: Structure, Properties 103
- Classification of Polymers used in Dentistry 103
- Degree of Polymerization 105
- Copolymers, Spatial Organization 105
- Condensation and Addition Polymerization 106
- Stages of Addition Polymerization 108
- General Properties of Polymers 109
- Plasticizers 110
- Acrylic Resins in Dentistry 111

6. Prosthetic Applications of Polymer Resins 113

- Complete and Partial Dentures 113
- Properties and Suitability of PMMA Resins 114
- Ideal Requirements of Denture Base Materials 113
- Classifications of Denture-base Materials 115
- Complete Denture Fabrication Procedures 115
- Preliminary Steps 115
- Compression Moulding—Flasking 116
- Separating Medium 116
- Heat-cure Resins—Properties of Monomer 117
- Manipulation of Denture-base Resins 117
- Mixing Stages, Dough Time 117, 118
- Packing, Trial Closures 118
- Curing Cycles 119, 120
- Deflasking 120
- Cold-cured Acrylic Resins 121
- Compositions, Techniques 121, 122
- Comparison of Heat- and Cold-cure Acrylics 122
- Fluid Resin Technique 122

Light Cure Resin Technique 123
 Defects of Dentures 124
 Denture Fabrication Defects and Remedies 125
 Processing Stresses (Crazing) 126
 Miscellaneous Resin Techniques 127
 Denture Reliners 127
 Denture Repair, Rebasing 128
 Maxillofacial Reconstruction Materials 129
 Acrylic and Porcelain Teeth 131
 Temporary Crown and Bridge Resins 131

7. Biocompatible Aspects of Dental Materials 133

Dynamic Interactions 133
 Adverse Effects from Dental Materials 133
 Biocompatibility Requirements 134
 Evaluation Methods, Groups I, II, III, Tests 135, 136
 Biocompatibility of Various Dental Materials 136
 Restorative Materials, Response of Few Metals 136, 137

8. Restorative Materials: Dental Cements 139

Conservative Methods of Treatments 139
 Restorations, Luting, Pulp Protection 140
 Ideal Requirements of Restorative Materials 140
 Classification of Restorative Materials 141
 Zinc Oxide Eugenol Cements 142
 Modified ZnOE 144
 Setting Action and Properties 144
 Manipulation of Zinc Oxide Eugenol Cements 146
 Zinc Phosphate Cement 147
 Composition, Setting, Properties 148, 149
 Manipulation, Frozen Slab Technique 150
 Zinc Hydrophosphate Cement 151
 Silicate Cements 152
 Zinc Silicophosphate Cements 154
 Zinc Polycarboxylate Cement 155
 Composition, Bonding, Properties 156
 Glass Ionomer Cements 159
 Types, Compositions 159
 Bonding Reactions, Properties 161
 Manipulation and Restoration 163
 Metal Modified GIC 164
 Resin Modified GIC 165
 Light Cure System (Tricure) 166
 Acrylic Resin Cements 168
 Cavity Liners, Varnishes, and Cement Bases 169
 Calcium Hydroxide Cement 171
 Gutta-percha 173

9. Composite Restorative Resins 176

Unfilled Acrylics 176
 Composites—Classifications, Compositions 177, 178
 Structural Formulae of Resin Matrices 179, 180
 Varieties, Conventional, Microfilled, Hybrid 180, 181
 Direct and Indirect Posteriors 184, 185
 Flowable, Light Activated, Prosthodontic Resins 185–189
 Preventive Resin Restorations 189

10. Bonding of Restorations 191

Bonding to Enamel 191
 Acid Etching 191
 Classifications 192
 Principles of Bonding and Generations 193–195
 Measurement of Bond Strengths 195

11. Direct Filling Gold 197

Properties, Classifications 197
 Manufacturing—Different Types 197–199
 Cohesive Gold, Desorption Heating 199
 Manipulation, Compaction 199
 Compaction of DFG, Properties of DFG 199–201

12. Silver Amalgam 202

Manufacturing Methods 203
 Classifications, Compositions, and Amalgamation Reactions 204
 Characteristic Properties 206
 Dimensional Changes 208
 Delayed, Mercuroscopic, Creep Expansions 209
 Manipulation Steps, Trituration, and Condensation Details 210–213
 Mercury Health Hazards 214
 Spherical Silver Amalgam Alloys 215
 Gallium, Copper, Indium Alloys 216, 217

13. Dental Ceramics 218

Classification of Dental Ceramics 219
 Feldspathic Porcelains 219
 Varieties of Feldspars 220
 Glass Modifiers 220
 Toughening of Porcelain 221
 Outline of Fabrication of Porcelain Article 223
 Metal Ceramics 225
 Alloys used for Metal Ceramics 225

Metal-ceramic Bonding	225
All-ceramic Restorations	227
Castable Glasses	227
Outline of Injection Moulding Glass Ceramic Technique	228
Hot Pressable Glass Ceramics	228
CAD-CAM Machinable–Chairside Restoration Techniques	229
Copy Milling Technique	230
Cementation of Ceramic Fabrications	230
Artificial Porcelain Teeth	230
Criteria for Selection and use of Dental Ceramics	230
Dental Applications of Ceramics	231

14. Dental Waxes (Auxiliary Materials) 232

Natural Waxes	232
Synthetic Waxes	232
Additives (Resins, Gums, and Fats)	233
Classification of Dental Waxes	233
Characteristic Properties of Waxes	233
Pattern Waxes	234
Casting Waxes	236
Baseplate or Modelling Waxes	236
Processing Waxes	236
Boxing and Beading Waxes	237
Utility Wax	237
Sticky Wax (Modelling Cement)	237
Carding Wax	237
White Wax	237
Blockout Wax	238
Carving Wax	238
Impression Waxes	238
Corrective Impression Waxes	238
Bite Registration Waxes	238

15. Casting Investment Materials (Auxiliary Materials) 239

Casting Shrinkages and Methods of Compensations	239
Compensation of Casting Shrinkage	240
High Heat and Low Heat Casting Techniques	240
Investment Materials	240
Requirements of Investment Materials	241
Gypsum-bonded Investment (GBI) Material	242
Composition	242
Phosphate-bonded Investment (PBI)	243
Ethyl Silicate-bonded Investments (ESBIs)	245
Other Investment Materials	245

16. Metals: Solidification and Microstructure 248

Characteristic Properties of Metals	249
-------------------------------------	-----

17. Alloys: Solidification and Phase Diagrams 252

Constitution—Equilibrium Phase Diagrams	252
Classification of Dental Casting Alloys	253
Solid Solutions	253
Silver–Copper System	256
Features of Equilibrium Phase Diagrams	256
Gold–Copper System	259

18. Dental Casting Alloys 263

Brief History	263
Requirements of Dental Casting Alloys	264
Classification of Dental Casting Alloys	265
Identification of Dental Casting Alloys	266
Classification by Applications and Descriptions	266
Alloying Properties of Metals used in Gold Alloys	266
Gold	267
Platinum	267
Palladium	267
Silver	268
Copper	268
Iridium	268
Zinc	268
Indium	269
Gallium	269
High Noble and Noble Metal Casting Alloys	269
General Properties of HN and N Metal Casting Alloys	269
HN and N Metal Alloys for Metal-ceramic	270
Metal-ceramic Bonding	271
General Properties of HN and N Metal-ceramic Alloys	271
Recent Noble Metal Alloys	271
HN and N Metal Casting Alloys for Removable Partial Denture Frameworks	271
Predominantly Base Metal (PBM) Casting Alloys	272
Classification According to PBM Casting Alloys	272
Alloying Properties	272
General Properties of PBM Casting Alloys	273
Clinical Aspects	273
Microstructure Metallography of PBM Alloys	273
Heat Treatments	274

PBM Alloys for Metal-ceramics 274
 Outline of Casting Procedure of High Fusing
 PBM Alloys 275
 Recovery and Finishing 275
 Bronze: Copper Alloys for Casting 275

19. Outline of Dental Alloy Casting Procedures 277

Introduction 277
 Wax Pattern 277
 Sprue Formers 278
 Casting Ring Liners 279
 Investing Procedure 279
 Wax Burn-out 280
 Casting Machines 280
 Melting of Alloys 280
 Casting of Alloy 282
 Devesting or Recovering 282
 Pickling 282
 Heat Treatments for HN Alloys 282
 Defective Castings: Classification, Causes and Remedies 282
 Distortion: Change of Shape or Size: Both Cause Misfit 282
 Discolouration 283
 Surface Roughness, Unevenness and Nodules 283
 Solidification Shrinkage Porosities 283
 Air Inclusion Porosities 284
 Incomplete Castings 284
 Fins 285
 Titanium 285
 Allotropic Forms: Microstructure 285
 Alloys of Titanium 285
 Problems in Casting of Titanium and its Alloys 286
 Alternatives to Metal Casting Technology 286

20. Wrought Alloys 288

Lattice Imperfections 288
 Slip Resistance 289
 Work Hardening and Annealing 291
 Annealing Heat Treatments 291
 Comparison of Cast (also Recrystallized Annealed) and Wrought Structures 292

21. Carbon Steels and Stainless Steels 293

Carbon Steels 293
 Pure Soft Iron 293
 Eutectoid Steel 293

Tempering of Carbon Steels 294
 Stainless Steels 294
 Passivation 294
 Varieties of Stainless Steels and Compositions 295
 Austenitic (18-8) Stainless Steels 295

22. Materials used in Orthodontia 298

Introduction 298
 Requirements for Selection of Orthodontic Wires 299
 Classification of Orthodontic Wires 299
 Manufacturing and Microstructures 299
 Microstructures 300
 ANSI/ADA Specification No. 32 300
 Austenitic 18-8 Stainless Steel Wires 300
 Elgiloy (Co-Cr-Ni-Fe) 301
 Wrought HN and N Metal Alloys 301
 β -Titanium and Titanium Alloy Wires 301
 Nickel Titanium (Ni-Ti)—Nitinol: Orthodontic Wires 302
 Ni-Ti Endodontic Instruments 304
 Recent Experimental Wires 304

23. Brazing and Welding 306

Soldering and Brazing 306
 Ideal Requirements of Solders (Brazing Fillers) 306
 Types of Solders 307
 Methods of Soldering 310
 Pre-brazing and Post-brazing 311
 Welding 311
 Electrical Resistance or Spot Welding 311
 Laser Welding 312
 Cast Joining Technique 312
 Casting to Embedded Alloys 312
 Lasers in Dentistry 313

24. Tarnish and Corrosion 315

Tarnish 315
 Causes for Tarnish 315
 Corrosion 315
 Classification of Corrosions 316
 Galvanic Corrosion 316
 Heterogeneous Composition Corrosion 317
 Concentration Cell (Crevice) Corrosion 318
 Corrosion due to Rough Surface 318
 Stress Corrosion 318
 Corrosion Fatigue 318
 Biocorrosion 318
 Methods to Minimize Corrosions 319

25. Dental Implant Materials 320

Indications for Dental Implantations 320
 Contraindications 320
 Ideal Requirements of Implant Materials 320
 Shapes, Designs and Components 321
 Implant Designs (Types) 321
 Biomechanism 322
 Brief Outline of Implant Placement 322
 Materials used for Dental Implants 323

**26. Cutting and Finishing Mechanics:
Tools and Materials used 326**

Necessity for Finishing 326
 Mechanics of Cutting, Grinding and Polishing 326

Other Finishing Methods 327
 Bulk Reduction by Cutting 327
 Factors Affecting the Rate of Cutting (Efficiency) 328
 Wearing, Erosions and Abrasions 329
 Factors to Increase Efficiency 330
 Abrasive Materials: Particle Size—Grit Numbers 330
 Polishing 333
 Glazing 334
 Finishing and Polishing of Restorations 334
 Dentifrices 335
 Powder System 335
 Paste or Gel Systems 335
 Abrasivity of Dentifrices 335

Appendix 337

Index 359
