<i>Preface</i>	<i>v</i>
1. Introduction	1
1.1 Microwave frequencies and uses	1
1.2 Microwave circuit elements and analysis	4
2. Electromagnetic theory	11
2.1 Maxwell's equations	11
2.2 Constitutive relations	17
2.3 Static fields	22
2.4 Wave equation	25
2.5 Energy and power	28
2.6 Boundary conditions	34
2.7 Plane waves	38
2.8 Reflection from a dielectric interface	43
2.9 Reflection from a conducting plane	47
2.10 Potential theory	51
*2.11 Derivation of solution for vector potential	54
2.12 Lorentz reciprocity theorem	56
Problems	59
References	63
3. Transmission lines and waveguides	64
3.1 Classification of wave solutions	65
3.2 Transmission lines (field analysis)	73
3.3 Transmission lines (distributed-circuit analysis)	80
*3.4 Transmission-line parameters	84
3.5 Terminated transmission line	89
3.6 Rectangular waveguide	95
3.7 Circular waveguides	107
*3.8 Surface waveguides	113
3.9 Power orthogonality	121
*3.10 Attenuation for degenerate modes	124
3.11 Wave velocities	132
Problems	138
References	143
4. Circuit theory for waveguiding systems	144
4.1 Equivalent voltages and currents	145
4.2 Impedance description of waveguide elements and circuits	148
*4.3 Foster's reactance theorem	153
*4.4 Even and odd properties of Z_{in}	155

4.5	N-port circuits	157
4.6	Two-port junctions	160
4.7	Scattering-matrix formulation	170
4.8	Scattering matrix for a two-port junction	176
4.9	Transmission-matrix representation	179
* 4.10	Excitation of waveguides	183
* 4.11	Waveguide coupling by apertures	190
	Problems	197
	References	202
5.	Impedance transformation and matching	203
5.1	Smith chart	203
5.2	Impedance matching with reactive elements	207
5.3	Double-stub matching network	212
5.4	Triple-stub tuner	215
5.5	Waveguide reactive elements	217
5.6	Quarter-wave transformers	221
5.7	Theory of small reflections	224
5.8	Approximate theory for multisection quarter-wave transformers	226
5.9	Binomial transformer	227
5.10	Chebyshev transformer	229
* 5.11	Chebyshev transformer (exact results)	233
5.12	Tapered transmission lines	237
* 5.13	Synthesis of transmission-line tapers	240
* 5.14	Chebyshev taper	248
* 5.15	Exact equation for the reflection coefficient	251
	Problems	254
	References	258
6.	Passive microwave devices	259
6.1	Terminations	259
6.2	Attenuators	262
6.3	Phase changers	265
6.4	Directional couplers	270
6.5	Hybrid junctions	282
6.6	Microwave propagation in ferrites	286
6.7	Faraday rotation	296
6.8	Microwave devices employing Faraday rotation	300
6.9	Circulators	304
6.10	Other ferrite devices	309
	Problems	309
	References	312
7.	Electromagnetic resonators	313
7.1	Resonant circuits	313

7.2	Transmission-line resonant circuits	317
7.3	Microwave cavities	321
7.4	Equivalent circuits for cavities	329
7.5	Fabry-Perot resonators	337
* 7.6	Field expansion in a general cavity	344
* 7.7	Oscillations in a source-free cavity	351
* 7.8	Excitation of cavities	356
	Problems	359
	References	362
8.	Periodic structures and filters	363
8.1	Capacitively loaded transmission-line circuit analysis	364
8.2	Wave analysis of periodic structures	369
8.3	Periodic structures composed of unsymmetrical two-port networks	372
8.4	Terminated periodic structures	373
8.5	Matching of periodic structures	375
8.6	k_0 - β diagram	377
8.7	Group velocity and energy flow	379
8.8	Floquet's theorem and spatial harmonics	381
8.9	Periodic structures for traveling-wave tubes	383
8.10	Sheath helix	392
8.11	Some general properties of a helix	396
8.12	Introduction to microwave filters	398
8.13	Image-parameter method of filter design	399
8.14	Filter design by insertion-loss method	403
8.15	Specification of power loss ratio	405
8.16	Some low-pass-filter designs	407
8.17	Frequency transformations	410
8.18	Impedance inverters	415
8.19	A transmission-line filter	422
8.20	Quarter-wave-coupled cavity filters	424
8.21	Direct-coupled cavity filters	428
	Problems	430
	References	433
9.	Microwave tubes	434
9.1	Introduction	434
9.2	Electron beams with d-c conditions	435
9.3	Space-charge waves on beams with confined flow	439
9.4	Space-charge waves on unfocused beams	446
9.5	A-c power relations	452
9.6	Velocity modulation	455
9.7	Two-cavity klystron	462
9.8	Reflex klystron	470

9.9	Magnetron	473
9.10	O-type traveling-wave tube	476
9.11	M-type traveling-wave tube	482
9.12	Other types of microwave tubes	484
9.13	Noise in microwave tubes	485
	Problems	489
	References	491
10.	Microwave masers	493
10.1	Some quantum-mechanical fundamentals	494
10.2	Absorption and emission of radiation	501
10.3	Description of a maser amplifier	507
10.4	Energy levels in ruby	510
10.5	Analysis of maser action	514
10.6	Macroscopic magnetic susceptibility	520
10.7	Equivalent circuit of a maser amplifier	524
10.8	Gain of a maser amplifier	529
10.9	Maser noise	532
10.10	Traveling-wave maser	534
10.11	Lasers	537
	Problems	539
	References	540
11.	Parametric amplifiers	541
11.1	p-n junction diodes	542
11.2	Manley-Rowe relations	546
11.3	Linearized equations for parametric amplifiers	549
11.4	Parametric up-convert	551
11.5	Negative-resistance parametric amplifier	555
11.6	Noise properties of parametric amplifiers	562
	Problems	569
	References	570
	Appendix	
I	Useful relations from vector analysis	571
II	Bessel functions	575
III	Physical constants and other data	579
	Index	581
