

CONTENTS

<i>Preface</i>	vii
<i>List of symbols and abbreviations</i>	xv

CHAPTER 1: Systems and Representation	1.1–1.120
--	------------------

1.1 Control System	1.1
1.2 Basic Elements in Control Systems	1.1
1.3 Open and Closed Loop Systems	1.2
1.3.1 Examples of Control Systems	1.3
1.4 Mathematical Models of Control Systems	1.6
1.5 Mechanical Translational Systems	1.7
1.6 Mechanical Rotational Systems	1.15
1.7 Electrical Systems	1.20
1.8 Electrical Analogous of Mechanical Translational Systems	1.22
1.9 Electrical Analogous of Mechanical Rotational Systems	1.37
1.10 Thermal Systems	1.46
1.10.1 Electrical Analogues of Thermal Systems	1.49
1.11 Transfer Function	1.54
1.11.1 Transfer Function of Armature Controlled Dc Motor	1.54
1.11.2 Transfer Function of Field Controlled Dc Motor	1.57
1.12 Servomotors	1.58
1.12.1 DC Servomotors	1.59
1.12.2 AC Servomotor	1.61
1.13 Block Diagrams	1.66
1.14 Signal Flow Graph	1.87
1.15 Short Questions and Answers	1.106
1.16 Exercises	1.112

CHAPTER 2: Time Response	2.1–2.114
---------------------------------	------------------

2.1 Time Response	2.1
2.2 Time domain specifications	2.1
2.3 Types of Test Input	2.13

- 2.4 Order of a system 2.14
- 2.5 Review of partial fraction expansion 2.15
- 2.6 First Order System 2.18
 - 2.6.1 Response of first order system for unit step input 2.18
- 2.7 Second Order System 2.20
 - 2.7.1 Response of Undamped Second Order System for Unit Step Input 2.21
 - 2.7.2 Response of Underdamped Second Order System for Unit Step Input 2.22
 - 2.7.3 Response of Critically Damped Second Order System for Unit Step Input 2.24
 - 2.7.4 Response of Over Damped Second Order System for Unit Step Input 2.25
- 2.8 Type Number of Control Systems 2.27
- 2.9 Error Signal 2.27
 - 2.9.1 Steady State Error 2.28
 - 2.9.2 Error Coefficients 2.28
 - 2.9.3 Steady State Error when the Input is Unit Step Signal 2.29
 - 2.9.4 Steady State Error when the Input is Unit Ramp Signal 2.29
 - 2.9.5 Steady State Error when the Input is Unit Parabolic Signal 2.30
- 2.10 Generalized Error Series and Coefficients 2.31
 - 2.10.1 Evaluation of Generalized Error Coefficients 2.33
 - 2.10.2 Correlation between Static and Dynamic Error Coefficients 2.35
 - 2.10.3 Alternate Method for Generalized Error Coefficients 2.35
- 2.11 Root Locus 2.43
 - 2.11.1 Magnitude and Angle Criterion 2.44
 - 2.11.2 Construction of Root Locus 2.46
 - 2.11.3 Explanation for the Various Steps in the Procedure for Constructing Root Locus 2.48
 - 2.11.4 Determination of Open Loop Gain for a Specified Damping of the Dominant Roots 2.51
- 2.12 Controllers 2.78
 - 2.12.1 ON-OFF or Two Position Controller 2.78
 - 2.12.2 Proportional Controller (P-Controller) 2.79
 - 2.12.3 Integral Controller (I-Controller) 2.82
 - 2.12.4 Proportional Plus Integral Controller (PI-Controller) 2.83
 - 2.12.5 Proportional Plus Derivative Controller (PD-Controller) 2.85
 - 2.12.6 Proportional Plus Integral Plus Derivative Controller (PID-Controller) 2.87
- 2.13 Effects of P, PI, PD and PID modes of feedback control 2.90
 - 2.13.1 Effect of Proportional Controller (P-Controller) 2.90
 - 2.13.2 Effect of PI-Controller 2.90
 - 2.13.3 Effect of PD-Controller 2.91
 - 2.13.4 Effect of PID-Controller 2.92

- 2.14 Time Response Analysis 2.93
- 2.15 Short questions and Answers 2.100
- 2.16 Exercises 2.110

CHAPTER 3: Frequency Response**3.1–3.88**

- 3.1 Sinusoidal Transfer function 3.1
- 3.2 Frequency Response 3.2
- 3.3 Frequency Domain Specifications 3.2
- 3.4 Frequency Domain Specifications of Second Order System 3.4
 - 3.4.1 Resonant peak (M_r) 3.4
 - 3.4.2 Resonant Frequency (ω_r) 3.5
 - 3.4.3 Bandwidth (ω_b) 3.5
 - 3.4.4 Phase margin (γ) 3.6
- 3.5 Frequency Response Plots 3.7
- 3.6 Bode Plot 3.7
 - 3.6.1 Basic factors of $G(j\omega)$ 3.8
 - 3.6.2 Procedure for Magnitude Plot of Bode Plot 3.15
 - 3.6.3 Procedure for Phase Plot of Bode Plot 3.17
 - 3.6.4 Determination of Gain Margin and Phase Margin from Bode Plot 3.17
 - 3.6.5 Gain Adjustment in Bode plot 3.18
- 3.7 Polar Plot 3.35
 - 3.7.1 Determination of Gain Margin and Phase Margin from Polar Plot 3.38
 - 3.7.2 Gain Adjustment using Polar Plot 3.39
- 3.8 Nichols plot 3.59
- 3.9 Determination of Closed Loop Response from Open Loop Response 3.63
 - 3.9.1 M and N circles 3.63
 - 3.9.2 Nichols Chart 3.68
- 3.10 Correlation between Frequency Domain and Time Domain Specifications 3.80
- 3.11 Short Questions and answers 3.83
- 3.12 Exercises 3.88

CHAPTER 4: Stability and Compensator Design**4.1–4.114**

- 4.1 Impulse Response and Stability 4.1
- 4.2 Characteristic Equation 4.3
- 4.3 Routh Hurwitz Criterion 4.8
- 4.4 Mathematical Preliminaries for Nyquist Stability Criterion 4.26

- 4.5 Nyquist Stability Criterion 4.29
- 4.6 Relative Stability 4.54
- 4.7 Gain margin and Phase Margin 4.55
- 4.8 Performance Criteria (Performance Indices) 4.61
- 4.9 Compensators 4.62
 - 4.9.1 Effect of Lag, Lead and Lag-Lead Compensation on Frequency Response 4.64
- 4.10 Lag Compensator 4.65
 - 4.10.1 S-Plane Representation of Lag Compensator 4.65
 - 4.10.2 Realization of Lag Compensator using Electrical Network 4.65
 - 4.10.3 Frequency Response of Lag Compensator 4.66
- 4.11 Lead Compensator 4.69
 - 4.11.1 S-Plane Representation of Lead Compensator 4.69
 - 4.11.2 Realization of Lead Compensator using Electrical Network 4.70
 - 4.11.3 Frequency Response of Lead Compensator 4.71
- 4.12 Lag-Lead Compensator 4.72
 - 4.12.1 S-Plane Representation of Lag-Lead Compensator 4.73
 - 4.12.2 Realization of lag-lead compensator using electrical network 4.73
 - 4.12.3 Frequency Response of Lag-Lead Compensator 4.74
- 4.13 Design of Lag Compensator using Bode Plot 4.75
- 4.14 Design of Lead Compensator using Bode Plot 4.85
- 4.15 Design of Lag-Lead Compensator using Bode Plot 4.97
- 4.16 Short Questions and Answers 4.105
- 4.17 Exercises 4.111

CHAPTER 5: State Variable Analysis

5.1–5.82

- 5.1 Concept of State Variables 5.1
 - 5.1.1 State Space Formulation 5.1
- 5.2 State Model of Linear and Time Invariant Systems 5.2
- 5.3 State Diagram 5.4
 - 5.3.1 State Space Representation using Physical Variables 5.6
 - 5.3.2 State Space Representation using Phase Variables 5.20
 - 5.3.3 State Space Representation using Canonical Variables 5.31
- 5.4 Transformation of State Model 5.37
 - 5.4.1 Canonical form of State Model 5.37
 - 5.4.2 Jordan Canonical form of State Model 5.38
- 5.5 Solution of State and Output Equations 5.39
 - 5.5.1 Solution of State and Output Equations without Input 5.39
 - 5.5.2 Solution of State and Output Equations with Input 5.41

5.5.3	Computation of State Transition Matrix using Matrix Exponential	5.43
5.5.4	Computation of State Transition Matrix by Laplace Transform Method	5.43
5.5.5	Solution of State Equations without Input by Laplace Transform Method	5.44
5.5.6	Solution of State Equation by Laplace Transform Method	5.44
5.5.7	Solution of State and Output Equations in Controllable Canonical Form	5.45
5.6	Concepts of Controllability and Observability	5.58
5.7	Short Questions and Answers	5.67
5.8	Exercises	5.77

Appendices**A.1–A.6****Index****1–4**
