<i>Foreword by AV Saha</i>	<i>vii</i>
<i>Preface to the Third Edition</i>	<i>ix</i>
<i>Preface to the First Edition</i>	<i>xi</i>
15. Nonaqueous Solvents	1
15.1 Introduction	1
15.2 Classification of Solvents	1
15.3 Characteristics of the Ionising Solvents	3
15.4 Liquid Ammonia as a Solvent	5
15.5 Liquid Hydrogen Fluoride as a Solvent	19
15.6 Liquid Hydrogen Cyanide as a Solvent	21
15.7 Acetic Acid (CH_3CO_2H) as a Solvent	22
15.8 Sulfuric Acid as a Solvent	22
15.9 Fluorosulfonic Acid (HSO_3F) as a Solvent and Superacids	25
15.10 Liquid Sulfur Dioxide as a Solvent	25
15.11 Bromine Trifluoride as a Solvent	26
15.12 Oxyhalides as the Solvents	27
15.13 Molten Salts (<i>i.e.</i> Ionic Liquids) as the Solvents	28
Exercise XV	30
16. Redox System and Electrode Potential—Application of Electrode Potential: Electroanalytical Techniques	34
16.1 Some Preliminary Aspects of Redox Reactions	34
Ion Electron Method of Balancing Redox Reactions; Oxidation Number and Rules for Calculating Oxidation Number; Oxidative Addition and Reductive Elimination Reaction; Equivalent Weights of Oxidants and Reductants; Complementary and Noncomplementary Redox Reactions; Redox and Acid-Base Reactions; Disproportionation and Comproportionation Reactions	
16.2 Electrode Potentials: Standard Potentials	54
Electrical Double Layer and Genesis of Electrode Potential; Determination of Electrode Potential; Electrochemical Cells: Galvanic and Electrolytic Cells: Reversible and Irreversible Cells; Thermodynamics and EMF (Electromotive Force) of Electrochemical Cells and Standard Electrode Potential; Standard Electrode Potential: Nernst Equation: Stoichiometric Standard Potential and Formal Potential: Concept of pE ; Sign Conventions of the Electrode Potentials; Types of Reversible Electrode; Membrane Electrode and Ion Selective Electrode; Standard Electrode Potentials of Metals and Electrochemical Series; Standard Reduction Potentials; Cell Representations and Cell Reactions and Function of Salt Bridges; Electrochemical Cells — Chemical Cells and Concentration Cells; Reversible Chemical Cells: Cells with and without Transference: Galvanic <i>vs.</i> Electrolytic Cell: Ohmic Potential and Observed Cell	

16.3 Formal (Conditional) Potentials	79
16.4 Effects of Different Factors on Electrode Potential: Application of such Effects in Analytical Chemistry	82
Effects of pH on Electrode Potentials due to the Participation of H^+ or OH^- in the Electrode Process; Effects of pH on Electrode Potentials due to the Formation of Sparingly Soluble Hydroxo-species; Effects of Precipitation (other than Hydroxides) on Electrode Potentials; Effects of Complexation on Electrode Potentials; Chemistry of Aqua Regia and Dissolution of Noble Metals: Enhancement of Oxidisability of Metals through Complexation; Attack of Noble Metals by HF and by a Mixture of HF and HNO_3 ; Enhancement of Oxidisability of Metals through Complexation; Dissolution of Antimony by a Mixture of Nitric Acid and Tartaric Acid: Enhancement of Oxidisability of Metals through Complexation	
16.5 Periodic Trends of Electrode Potential	110
Variation of Standard Oxidation Potential of the Metals; Variation of Oxidising Power of the Oxyanions in a Group	
16.6 Function of Zimmermann-Reinhardt (Z-R) Solution (in Titrating $Fe(II)$ by $KMnO_4$ in the Presence of Chloride)	114
16.7 Instability of Some Species in Aqueous Solution	115
16.8 EMF Diagrams	119
Latimer Diagram; Frost Diagrams (Ebsworth Diagram); Pourbaix Diagram or Potential- pH ($E-pH$) Diagram	
16.9 Equilibrium Constant from the Standard Electrode Potentials	133
16.10 Disproportionation and Comproportionation Reactions	135
16.11 Potential Profile in a Redox Titration	149
16.12 Selection of a Redox Indicator	159
16.13 Potentiometric Titrations	164
16.14 Practical Applications: Electrochemical Cells and Batteries — Primary Cells, Secondary Cells, Fuel Cells: Corrosion	170
Basic Requirements of an Electrochemical Cell to Act as a Power Source; Representative Examples of Primary and Secondary Cells; Some Representative Fuel Cells; Electrochemistry of Corrosion; Electrolytic Cell vs. Galvanic Cell: Electrolysis of Solutions and Electrodeposition; Decomposition Voltage of Electrolysis and Electrolytic Separation of Metals; Some Other Practical Applications of the Knowledge of Electrode Potential	
16.15 Kinetic Factors in Electrode Process and Electron Transfer Reactions	190
Importance of Kinetic Factors; Importance of Overpotential (in Electrode Process and Cell Potential): Tafel Equation; Redox Reactions through Electron Transfer; Redox Reactions through Atom Transfer	
16.16 Photochemical Reactions: Photoredox Reaction and Photochemical Splitting of Water	194
Some Representative Photochemical Reactions Illustrating the Characteristic Features; Photochemical Splitting of Water (<i>i.e.</i> Artificial Photosynthesis) and Photochemistry of $[Ru(bpy)_3]^{2+}$; TiO_2 , an Important Photocatalyst: Oxidation of Organic Matter and Photoelectrolysis of Water; Direct Photochemical Reduction of Dinitrogen; Charge Transfer Band and Redox Stability	
16.17 Ellingham Diagram: Reduction of Metal Oxides: Carbon – A Potential Reducing Agent	210
16.18 Hydrometallurgy	217

16.19 Electrode Potentials in Nonaqueous Systems	217
16.20 Examples of Some Common Catalysed Redox Reactions	219
16.21 Redox Activity in Relation to Explosive Action	221
16.22 Chemistry of Some Important Electroanalytical Techniques	222
Polarographic Method of Analysis; Cyclic Voltammetry (CV); Amperometric Titration; Coulometric Analysis	
Solved Numerical Problems	255
Exercise XVI	274
Numerical Problems	283
Appendix 16A	287
Chemistry of Explosives	
Appendix 16B	291
Chemical Clock Reactions: Oscillating Reactions	
17. Metallurgy: Principles, Pyrometallurgy vs. Hydrometallurgy—Extraction and Purification of Metals, Physio-Chemical Methods of Separation of Metals	297
17.1 Classification of Metals and their Occurrence in Nature	297
Chief Modes of Occurrence of Metals and Classification of Metals based on their Standard Electrode Potentials; Goldschmidt's Geochemical Classification of Elements based on Chemical Affinity	
17.2 The Major Sources of Metals — Earth's Crust and Sea Water: Minerals, Ores and Gangue	300
Earth's Crust — Minerals and Ores; Sea-Water and Sea-Bed as the Sources of Metals; Classification of Ores Depending on the Nature of Chemical Composition of the Principal Constituents; Gangue	
17.3 Metallurgy and its Main Steps	303
17.4 Concentration of Ore	303
17.5 Conversion of Concentrated Ore and Metallic Oxide: Calcination and Roasting	305
17.6 Smelting: Flux and Slag	307
17.7 Isolation of Metals through Reduction of Metal Ores	308
Carbon Reduction of Oxides of Metals in Furnace and Ellingham Diagram; Reduction by H_2 at High Temperature; Displacement by Metal in Solution: Cementation in Hydrometallurgy; Reduction by a More Electropositive Metal at High Temperature; Self-reduction Method; Electrolytic Reduction Method; Different Reduction Processes for Metal Extraction; Special Techniques of Metal Extraction: Extraction and Refining of Nickel by Mond's Process; Special Techniques of Metal Extraction: Hydrometallurgical Extraction of Silver; Special Technique of Metal Extraction: Hydrometallurgical Extraction of Gold; Special Technique of Metal Extraction: Extraction of Titanium and Zirconium; Extraction Procedure (Summary) of Different Metals	
17.8 Hydrometallurgy and Biomining Technology	325
Hydrometallurgy vs. Pyrometallurgy and Basic Steps of Hydrometallurgy; Leaching of Ores and its Chemistry; Leach Solution: Concentration and Purification; Recovery of the Metal from the Concentrated and Purified Leach Liquor; Chemistry of Leaching of Sulfide Ores of Copper, Nickel, Zinc and Cobalt; Electrolysis of Aqueous Solution of Metal Salts for the Recovery of the Metal — Hydrometallurgical Approach; Biomining and Biomineral Technology: Metal Extraction by Bioleaching	

17.9 Purification and Refining of Metals After their Extraction from Ores	339
Physical Methods of Purification of Metals; Chemical Methods of Purification of Metals; Electrolytic Refining of Metals — A Special Chemical Method of Purification	
17.10 Physico-Chemical Methods of Separation and Purification of Metals	347
Solvent Extraction (<i>i.e.</i> Liquid-Liquid Extraction) of Metals; Quantitative Treatment of Solvent Extraction (<i>i.e.</i> Liquid-Liquid Extraction); Characteristic Features of Ion Exchange Resins and Ion Exchange Process (<i>i.e.</i> Ion Exchange Chromatography); Application of Ion Exchange Chromatography for Purification and Separation of Metal Ions; Chelating Resins to Bind the Metal Ions; Chromatographic Method: Separation and Purification of Metal Ions	
Exercise XVII	377
Bibliography	B1–B2
Appendices	A1–A10
Appendix I: Units and Conversion Factors	A1
Appendix II: Some Physical and Chemical Constants	A4
Appendix III: Wavelength and Colours	A5
Appendix IV: Names, Symbols, Atomic Numbers and Atomic Weights of the Elements	A6
Appendix V: Some Useful Mathematical Relationships	A8
Index	I1–I7
