<i>Preface to the Fourth Edition</i>	v
<i>Preface to the First Edition</i>	vi
Chapter 1 Introduction	1
• Apparatus and basic techniques	1
• Glassware	1
• Calibration of pipettes, burettes and graduated flasks	3
• Drying of organic solutions	4
Chapter 2 Limit Tests	6
• Limit test for chloride	6
• Limit test for sulphate	7
• Limit test for iron	7
• Limit test for heavy metals	8
• Limit test for lead	11
• Limit test for arsenic	12
▪ Preparation of the test solution	15
▪ Modification of the general testing method for arsenic	16
▪ Carbonates, hydroxides and oxides	16
▪ Organic compounds	16
▪ Nitric acid and nitrates	16
▪ Boric acid and borax	17
▪ Ammonia solution	17
▪ Liquid glucose and potassium acid tartarate	17
▪ Hypophosphorus acid	17
▪ Oxidizing agents	17
▪ Compounds of copper, bismuth, antimony and iron	17
▪ Sulphur	18
Chapter 3 Titrimetric Analysis	19
• Calculation of equivalent weight	20
• Equivalence of standard solutions	21
• Preparation of standard solutions	21
• Acidimetry and alkalimetry or neutralization reaction	22
• Complex formation reactions	25
• Preparation and standardization of 0.1M disodium edetate solution	29
• Precipitation reactions	30
• Oxidation–reduction reactions	31

- Potassium permanganate titration 33
- Ceric sulphate titration 35
- Titration of iodine 36
- Titration of bromine 37
- Titration in non-aqueous solvents 38
- Sodium nitrite titrations 41

Chapter 4 Electroanalytical Methods to Determine Normality of Solution 43

- Conductometric titrations 43
 - Experiment 4.1: Conductometric titration of a strong acid with a strong base 45
 - Experiment 4.2: Conductometric determination of acetic acid with NaOH 47
 - Experiment 4.3: Conductometric titration of a mixture of a strong acid (HCl) and weak acid (CH_3COOH) with a strong base 48
- Potentiometric titrations 50
 - Experiment 4.4: Potentiometric titration of strong acid with strong base 51

Chapter 5 Qualitative Inorganic Analysis 54

Part I: Identification tests for inorganic drugs 54

- Ammonium chloride (NH_4Cl) 54
- Barium sulphate (BaSO_4) 55
- Boric acid (H_3BO_3) 56
- Borax ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$) 56
- Bentonite 57
- Calcium gluconate ($\text{C}_{12}\text{H}_{22}\text{CaO}_{14} \cdot \text{H}_2\text{O}$) 57
- Chlorinated lime ($\text{Ca}(\text{OCl})_2$) 58
- Copper sulphate ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$) 59
- Ferrous gluconate 59
- Ferric ammonium citrate 61
- Ferrous sulphate ($\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$) 63
- Hydrogen peroxide (H_2O_2) 63
- Iodine (I_2) 63
- Magnesium sulphate ($\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$) 64
- Mercuric oxide yellow (HgO) 64
- Potassium permanganate (KMnO_4) 65
- Potassium iodide (KI) 65
- Sodium benzoate ($\text{C}_6\text{H}_5\text{COONa}$) 66
- Sodium bicarbonate (NaHCO_3) 67
- Sodium chloride (NaCl) 68
- Sodium thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$) 68
- Zinc sulphate ($\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$) 68
- Zinc oxide (ZnO) 69

Part II: Test for purity 69

- Bentonite 69
- Aluminum hydroxide gel 70
- Potassium iodide (KI) 70

Part III: Qualitative inorganic group analysis 70

- I. Preliminary examination 70
- II. Systematic examination of cations or basic radicals 74
 - Removal of interfering acid radicals 86
- III. Systematic examination of anions or acid radicals 92

Chapter 6 Preparation of Some Inorganic Pharmaceuticals	104
• Preparation of boric acid from borax	104
• Preparation of ferrous sulphate	105
• Preparation of potash alum from aluminum foil	106
Chapter 7 Volumetric Analysis	108
• Neutralization titrations	108
▪ Acidimetry titrations	108
▪ Alkalimetry titrations	111
• Precipitation titrations	114
• Oxidation–reduction titrations	116
• Iodimetric and iodometric methods	117
• Ceric sulphate titration method	122
• Oxidation–reduction method with 0.1N bromine solution	123
• Oxidation–reduction method with potassium iodate solution	125
• Complexometric titrations	125
• Non-aqueous titrations	127
• Diazotization titrations	131
Chapter 8 Gravimetric Analysis	134
• Assay of sodium sulphate	137
• Assay of zinc sulphate	137
• Assay of magnesium sulphate	138
• Assay of alum, $KAl(SO_4)_2 \cdot 12H_2O$	138
Chapter 9 Detection of Nitrogen, Sulphur and Halogen Elements in Organic Compounds	140
• Lassaigne’s test	140
• Test for nitrogen	140
• Test for sulphur	141
• Test for nitrogen and sulphur	141
• Test for chloride, bromide and iodide	141
Chapter 10 Determination of Melting and Boiling Points	143
• Method of determination of melting point	143
• Method of determination of boiling point	144
Chapter 11 Qualitative Organic Analysis	145
1. Physical examination of the compound	145
2. Tests for unsaturation	146
3. Solubility tests	146
4. Detection of elements	146
5. Detection of functional groups	146
• Compounds containing C and H with or without oxygen	146
• Compounds containing C, H, N with or without oxygen atom	154
• Compounds containing halogen atom (halohydrocarbons)	157
• Compounds containing C, H and sulphur with oxygen or without oxygen	157
• Compounds containing C and H only	159
6. Determination of melting point/boiling point of the compound	159

7. Confirmatory tests of the inferred organic compound 159

- Carboxylic acids 159
- Alcohols 163
- Phenols 164
- Aldehydes 167
- Ketones 168
- Esters 169
- Carbohydrates 169
- Amines 170
- Nitro compounds 171
- Amides 172
- Imides 173
- Anilide 173
- Halogen compound 173
- Sulphonic acids 174
- Thioureas 175
- Hydrocarbons 175

8. Derivatization of unknown organic compound 177

Chapter 12 Preparation of Derivatives**188**

1. Carboxylic acids 188
2. Alcohol 189
3. Esters 189
4. Aldehydes and ketones 190
5. Carbohydrates 191
6. Phenols 191
7. Primary and secondary amines 192
8. Tertiary amines 193
9. Amides, imides and anilides 194
10. Sulphonic acids 195
11. Hydrocarbons 195
12. Nitro compounds 196
13. Miscellaneous compounds 197

Chapter 13 Identification Test of Organic Drugs**198**

- Ascorbic acid or vitamin C 198
- Aspirin (*syn*: acetylsalicylic acid) 199
- Analgin 200
- Acetazolamide 200
- Barbiturates 201
- Caffeine 202
- Phenothiazine 202
- Sulphonamides 203
- Sulphacetamide 204
- Tannic acid 204
- Alkaloids 205
- Proteins 205
- Amino acids 206
- Glycine $\text{H}_2\text{N}-\text{CH}_2-\text{COOH}$ 206

- Chloramphenicol 206
- Chloroquine phosphate 207
- Procaine penicillin 208

Chapter 14 Basic Laboratory Techniques**209**

- Crystallization technique 209
 - Experiment 14.1: To prepare crystals of pure benzoic acid from an impure sample by crystallization 212
 - Experiment 14.2: To prepare crystals of pure copper sulphate from an impure sample by crystallization 212
- Heating under refluxing condition 213
- Distillation 214
 - Experiment 14.3: Isolation of orange oil by steam distillation 215

Chapter 15 List of Organic Preparations**217****Single step preparations 218**

1. Preparation of aspirin from salicylic acid 218
2. Preparation of phenylbenzoate from phenol 220
3. Preparation of *m*-dinitrobenzene from nitrobenzene 221
4. Preparation of benzoic acid from alkyl benzoate (ethyl benzoate) 222
5. Preparation of benzoic acid from benzyl chloride 223
6. Preparation of salicylic acid from alkyl salicylate (methyl salicylate) 224
7. Preparation of 2,4,6-tribromoaniline from aniline 225
8. Preparation of picric acid (2,4,6-trinitrophenol) from phenol 226
9. Preparation of 2,4,6-tribromophenol from phenol 227
10. Preparation of iodoform from ethanol 227
11. Preparation of benzoic acid from benzamide 229
12. Preparation of Schiff's base from benzaldehyde and aniline 230
13. Preparation of benzimidazole from *o*-phenylenediamine 230
14. Preparation of *para*-iodobenzoic acid from *para*-aminobenzoic acid 231
15. Preparation of 1,2,3,4-tetrahydrocarbazole 233
16. Preparation of benzalacetophenone from acetophenone 234
17. Preparation of 3-methyl-1-phenyl pyrazole-5-one 235
18. Preparation of *p*-acetylaminophenol or acetaminophen (paracetamol) 235
19. Preparation of phenacetin from acetaminophen 236
20. Preparation of α -phenylthiourea 237
21. Preparation of glucosazone from glucose 238
22. Preparation of phenolphthalein from phenol 239
23. Preparation of urotropine (hexamethylenetetramine) from formaldehyde 240
24. Preparation of barbituric acid from urea 240
25. Preparation of phenyl azo- β -naphthol (an azo dye) 241
26. Preparation of dibenzalacetone (dibenzylidene acetone) 242
27. Preparations of cinnamic acid from benzaldehyde 243
28. Preparation of *m*-nitrobenzoic acid 245
29. Preparation of 5-nitro salicylic acid from salicylic acid 245
30. Preparation of methyl salicylate (Wintergreen oil) 247
31. Preparation of benzocaine 248
32. Preparation of 3,5-dimethylpyrazole from acetylacetone 249
33. Preparation of phenothiazine from diphenyl amine 250

34. Preparation of chlorobutanol from acetone and chloroform	251
35. Preparation of 2,5-diphenyl oxazole	252
36. Preparation of benzotriazole from <i>o</i> -phenylenediamine	254
37. Preparation of 2,4,5-triphenyl-1 <i>H</i> -imidazole from benzil	255
Two steps preparations	256
38. Preparation of <i>p</i> -nitroacetanilide from aniline	256
39. Preparation of <i>p</i> -bromoacetanilide from aniline	258
40. Preparation of <i>p</i> -bromobenzanilide from aniline	259
41. Preparation of methyl orange from aniline	260
42. Preparation of tetrabromofluorescein (eosin) from resorcinol	262
43. Preparation of benzoic acid from benzoin	264
44. Preparation of 2,3-diphenyl quinoxaline from benzoin	266
45. Preparation of 5,5-diphenylhydantoin from benzoin	267
46. Preparation of 4-benzylidene-2-phenyl oxazole-5-one from glycine	268
47. Preparation of 7-acetoxy-4-methyl coumarin from resorcinol	270
48. Preparation of isatin from chloral hydrate	271
49. Preparation of <i>p</i> -bromoaniline from acetanilide	273
50. Preparation of 2-phenyl indole from acetophenone	275
51. Preparation of antipyrine	276
Three steps preparations	277
52. Preparation of acridone from anthranilic acid	277
53. Preparation of succinyl from succinic anhydride	279
54. Preparation of anthrone from phthalic anhydride	281
55. Preparation of acetanilide from benzene	283
56. Preparation of diphenic acid from phthalic anhydride	286
57. Preparation of sulphanilamide from acetanilide	288
58. Preparation of tolbutamide from toluene	291
59. Synthesis of 3-hydroxycoumarin	293
Chapter 16 Extraction Procedures for Isolation of Particular Constituents	296
Extraction procedures	296
1. Isolation of caffeine (1,3,7-trimethylxanthine)	296
2. Isolation of eugenol from cinnamon leaf oil	298
3. Isolation of eugenol from clove buds	298
4. Isolation of pectin from orange peels	300
5. Isolation of piperine from black pepper	301
6. Isolation of hesperidin from orange peel	302
7. Isolation of hippuric acid from urine	303
8. Isolation of cystine from human hair	303
Chapter 17 Physical Methods for Analysis	305
Determination of viscosity	306
• Experiment 17.1. Determine the viscosity of glycerin by Ostwald viscometer	306
• Experiment 17.2. Determine the % composition (water and ethanol) of a given mixture by viscosity measurement	307
Surface tension	308
• Experiment 17.3: Determine the surface tension of acetone by stalagmometer by drops number method	310
• Experiment 17.4. Determine the % composition of a mixture (benzene and acetone) by measurement of surface tension	311

Partition coefficient law 311

- Experiment 17.5: Determine the partition coefficient of succinic acid between ether and water 312
- Experiment 17.6: Determine the partition coefficient of benzoic acid in benzene and water 313
- Experiment 17.7: Determine the partition coefficient of iodine in carbon tetrachloride and water 315

Applications of partition coefficient 316

- Experiment 17.8: Determine the partition coefficient of aspirin in chloroform and water 317
- Experiment 17.9: Determine the partition coefficient of caffeine in chloroform and water 318

Critical solution temperature 319

- Experiment 17.10: Determine the critical solution temperature and composition of the solution in the CST for phenol water system 320
- Experiment 17.11: Determine the concentration of aqueous sodium chloride with the help of critical solution temperature 321

Polarimetry 322

- Experiment 17.12: Perform the quantitative estimation of dextrose by measuring specific rotation 324

Calculation of solubility product 325

- Experiment 17.13: Determine the solubility product of Ca(OH)_2 at room temperature 326

Chemical kinetics 327

- Experiment 17.14: Determine of rate constant for hydrolysis of ethyl acetate in presence of HCl at room temperature 329
- Experiment 17.15: Determine of rate constant for hydrolysis of ethyl acetate in presence of alkali 331

Refractometry 333

- Experiment 17.16: Determine the refractive index of a given liquid and find its specific and molar refraction 336

Chapter 18 Instrumental Spectroscopical Analysis

337

Colorimetric analysis 337

- Experiment 18.1: Estimation of reducing sugar by dinitrosalicylic method (colorimetric analysis) 337
- Experiment 18.2: Colorimetric method for estimation of sulphacetamide 338
- Experiment 18.3: Analysis of the effect of solvent on absorption maxima of drug 340
- Experiment 18.4: Determination of paracetamol content in tablet 341
- Experiment 18.5: UV spectrophotometric methods for simultaneous estimation of ibuprofen and paracetamol in tablet by simultaneous equation method 343
- Experiment 18.6: Analysis of the quenching effect of iodide salt on fluorescence intensity of quinine sulphate 346
- Experiment 18.7: Fluorimetric determination of quinine 348
- Experiment 18.8: Determination of sodium and potassium ion concentrations in solution 350
- Experiment 18.9: Determination of sulphate by nephelometric titration 352
- Experiment 18.10: Determination of small amount of chloride by nephelometric titration 353

Chapter 19 Quantitative Organic Analysis**356**

- Acid value 356
- Saponification value 357
- Iodine value 358
- Hydroxyl value 361
- Peroxide value 362
- Acetyl value 362
- Ester value 363
- Reichert Meissel value 363
- Determination of the number of hydroxyl groups in phenol 364
- Determination of the number of hydroxyl groups in polyhydric alcohol 364
- Determination of the % of acetyl groups in an acetyl ester 365
- Determination of number of amino group 366
- Determination of % of ester group 366
- Determination of number of carboxylic groups 366
- Estimation of % of glucose in the given sample 367
- Estimation of glycine 368
- Determination of number of keto groups 368

Chapter 20 Chromatography**370****Thin layer chromatography (TLC) 370**

- Experiment 20.1: Identify the amino acid with the help of thin layer chromatography. Calculate its R_f value of individual amino acid 373
- Experiment 20.2: Identify the drug among the aspirin, acetaminophen, ibuprofen and caffeine with the help of thin layer chromatography. Calculate its R_f value 374
- Experiment 20.3: Identify the sulpha drug among the sulphadiazine, sulphacetamide, sulphathiazole with the help of thin layer chromatography. Calculate its R_f value 375

Paper chromatography 375

- Experiment 20.4: Identify the sugar molecule with the help of ascending paper chromatography. Calculate its R_f value 380
- Experiment 20.5: Identify the amino acid with the help of ascending paper chromatography. Calculate its R_f value 381
- Experiment 20.6: Column chromatographic separation of pigments from green leaves 381

*Index***385**
