<i>Preface</i>	v	
1. Introduction	1	
1.1 Historical Perspectives	1	
1.2 General Optical Fiber Communication System	3	
1.3 Digital Modulation for Advanced Optical Transmission System	7	
1.4 Demodulation Techniques	9	
1.5 Advantages of Optical Fiber Communication	10	
2. Electromagnetic Optics	23	
2.1 Introduction	23	
2.2 Nature of Light	23	
2.3 Fundamental Laws of Optics	24	
2.4 Polarization of Light	27	
2.5 Polarization of Sensitive Materials	28	
2.6 Electromagnetic Waves	30	
2.6.1 Maxwell's Equations and Boundary Conditions	31	
2.6.2 Maxwell's Equations in a Source-Free Region	33	
2.6.3 Boundary Conditions	34	
2.7 Wave Equation	35	
2.8 Time Harmonic Fields	37	
2.9 Polarized Waves	38	
2.9.1 Linearly Polarized Waves	38	
2.9.2 Circularly and Elliptically Polarized Waves	39	
2.9.3 Fresnel Coefficients and Phases	40	
2.9.4 TE Polarization	40	
2.9.5 TM Polarization	41	
2.9.6 Polarization by Reflection from Dielectric Surfaces	42	
2.9.7 Expression for Brewster's Angle	43	
2.10 Antireflection Coating	43	
2.11 Bragg Mirrors	44	
2.12 Poynting Theorem	44	
3. Optical Fibers	62	
3.1 Introduction	62	
3.2 Optical Fiber	64	
3.3 Optical Fiber as Waveguide: Principle of Propagation	65	
3.4 Principle of Optical Fiber: Total Internal Reflection	66	
3.4.1 Meridional and Skew Rays	70	
3.4.2 Acceptance Angle for Skew Rays	72	
3.5 Modes of Propagation: V-Parameter	73	
3.6 Index Profile or Refractive Index Profile	76	
3.7 Types of Optical Fibers	77	
3.8 Ray propagation in Graded-Index Fibers	86	
3.9 Effect of Material Dispersion	88	
3.10 The Combined Effect of Multipath and Material Dispersion	90	
3.11 Calculation of RMS Pulse Width	91	
3.12 Advantages of Optical Fiber	91	
3.13 Signal Degradation	92	
3.14 Fiber Losses	92	
3.14.1 Attenuation	93	
3.14.2 Dispersion Shifted Fiber	94	
3.15 Optical Fiber Cables	95	
3.15.1 Fiber Strength and Durability	95	
3.15.2 Fiber-Optic Connectors	96	
3.16 Fiber Fabrication	96	
3.16.1 Liquid Phase Melting Techniques	97	
3.16.2 Vapour Phase Deposition Technique	98	
3.16.3 Modern Fiber Optic Processes	99	
3.16.4 Advanced Fiber Optic Cables	99	
3.16.5 Fiber Optic Cables vs Copper Cables	100	
3.17 Polarization	101	
3.18 Optical Fiber Amplification	103	
3.19 Optical Nonlinearities in Fibers	104	
3.20 Solitons in Optical Fiber	106	
3.21 Applications of Fiber Optic Cables	107	
3.21.1 Applications of Advanced Fiber Cables	108	
4. Fiber Optic Materials, Cables and Connectors—Power Launching and Fiber Coupling	130	
4.1 Introduction	130	
4.2 Fiber Materials	130	
4.2.1 Glass Fibers	131	
4.2.2 Fluoride Fibers	133	
4.2.3 Active Glass Fibers	134	
4.2.4 Chalcogenide Glass Fibers	135	
4.2.5 Plastic Optical Fiber (POF)	135	
4.2.6 Plastic Clad Silica (PCS) Fibers	136	
4.3 Fiber Fabrication Methods	137	

4.4 Mechanical Properties of Optical Fibers	142	5.3 Solution in an Inhomogeneous Medium	185
4.5 Optical Fiber Cables	143	5.4 Planar Optical Waveguide	188
4.6 Fiber-Optic Connections and Related Losses	146	5.5 Modes in Cylindrical Optical Fibers	191
4.7 Connectors and Splices	149	5.5.1 Bound or Guided Modes	191
4.8 Applications of Connectors and Splices	150	5.5.2 Cladding Modes	192
4.9 Requirements of Connectors and Splices	150	5.5.3 Leaky Modes	192
4.10 Fiber Connectors	151	5.5.4 Formulation of Waveguide Equations	192
4.11 Mechanical Considerations	152	5.6 The Modes of a Symmetric Step Index Fiber	195
4.11.1 Durability	152	5.7 Power Distribution and Confinement Factor	199
4.11.2 Environmental Consideration	153	5.8 Cylindrical Waveguides	202
4.11.3 Compatibility	153	5.8.1 Modal Analysis of an Ideal Step-Index Optical Fiber	202
4.12 Fiber-Optic Connector Types	153	5.8.2 Fraction Modal Power Distribution	209
4.13 Adapters for Different Fiber-Optic Connector Types	154	5.8.3 Graded Index (GI) Fibers	211
4.14 Fiber-Optic Connector Structures	154	5.8.4 Limitations of Multimode Fibers	213
4.15 Fiber-Optic Connector Assembly Techniques	154	5.9 Photonic Crystal Fibers	213
4.15.1 Common Fiber Connector Assembly	155	5.9.1 Index-Guided Microstructures	214
4.15.2 Hot-Melt Connector	155	5.9.2 Photonic Band Gap Fibers	215
4.15.3 Epoxyless Connector	155		
4.15.4 Butt-Jointed Connectors	155		
4.15.5 Expanded-Beam Connectors	156		
4.15.6 Multifiber Connectors	156		
4.15.7 Automated Polishing	156		
4.15.8 Fluid Jet Polishing	157		
4.15.9 Fiber-Optic Connector Cleaning	157		
4.15.10 Connector Testing	157		
4.16 Fiber splicing	158		
4.16.1 Fusion Splices	159		
4.16.2 Mechanical Splices/V-Groove	159		
4.16.3 Multiple Splices	161		
4.17 Connectors versus Splices	162		
4.18 Characterization of Optical Fibers	162		
4.18.1 Measurement of Optical Attenuation	162		
4.18.2 Measurement of Dispersion	165		
4.18.3 Measurement of Numerical Aperture (NA)	165		
4.18.4 Measurement of Refractive Index (RI) Profile	166		
4.18.5 Field Measurements: Optical Time Domain Reflectometry (OTDR)	167		
4.19 Applications of the Fiber Optic Cables	168		
5. Optical Fiber Waveguides and Mode Analysis	183	6. Transmission Characteristics of Optical Fibers	237
5.1 Introduction	183	6.1 Introduction	237
5.2 Concept of Electromagnetic Waves	183	6.2 Attenuation	238
		6.3 Absorption Loss	239
		6.3.1 Intrinsic Absorption	239
		6.3.2 Extrinsic Absorption	242
		6.3.3 Defect Loss	243
		6.3.4 Scattering Loss	243
		6.4 Mid-Infrared and Far-Infrared Transmission	250
		6.5 Dispersion	253
		6.5.1 Intermodal Dispersion or Chromatic Dispersion or Group Velocity Dispersion (GVD)	256
		6.6 Signal Distortion in Optical Fibers	256
		6.6.1 Group Velocity Dispersion	258
		6.7 Waveguide Dispersion in a Single Mode Fiber	264
		6.7.1 Profile Dispersion	264
		6.7.2 Polarization Mode Dispersion (PMD)	266
		6.8 Intermodal Dispersion	268
		6.8.1 Pulse Broadening in a Multimode Step-Index Fiber	269
		6.8.2 RMS Pulse Broadening	271
		6.8.3 Intermodal Dispersion in a Multimode Graded Index Fiber	272
		6.8.4 Mode Coupling	277

6.9 Dispersion Optimization of Single Mode Fibers 278	
6.9.1 Dispersion-Shifted Fibers (DSFs) 278	
6.9.2 Dispersion-Flattened Fibers (DFFs) 279	
6.9.3 Polarization Maintaining Fibers 282	
6.10 Nonlinear Effects 283	
6.11 Soliton Propagation 284	
7. Optical Sources 1—The LASER	311
7.1 Introduction 311	
7.2 Semiconductors 313	
7.2.1 Energy Band Diagram 313	
7.2.2 The <i>pn</i> Junction 320	
7.2.3 Spontaneous and Stimulated Emission at the <i>pn</i> Junction 321	
7.2.4 Direct and Indirect Band Gap Semiconductors 321	
7.2.5 Compound Semiconductors 325	
7.3 Spontaneous and Stimulated Emission 327	
7.4 Relation between Einstein's Coefficients 328	
7.5 Laser Components 329	
7.6 Population Inversion 331	
7.7 Optical Feedback 332	
7.8 Conditions for Laser Oscillations 333	
7.9 Laser Rate Equations 337	
7.10 Characteristics of Laser Radiation 340	
7.11 Types of Lasers 341	
7.12 Laser Oscillations and Resonant Modes 342	
7.13 Semiconductor Lasers 343	
7.13.1 Semiconductor Laser Diode or Semiconductor Injection Laser 343	
7.13.2 Population Inversion and Optical Feedback in a Laser Diode 344	
7.13.3 Distributed-Feedback Lasers 345	
7.13.4 Heterojunction Lasers 347	
7.13.5 Radiative and Nonradiative Recombination 350	
7.13.6 Laser Rate Equations 351	
7.13.7 Steady-State Solutions of Rate Equations 352	
7.13.8 Lasing Conditions and Resonant Frequencies 355	
7.14 Laser Diode Structures and Radiation Patterns 357	
7.15 Quantum-Well Lasers 361	
7.16 Quantum-Dot Lasers 362	
7.17 Vertical Cavity Surface Emitting Lasers (VCSELs) 364	
7.18 Distributed-Feedback Lasers: FP Laser, DBR Laser, and DFB Laser 366	
7.19 Electron Transitions in Semiconductors 367	
7.20 Homogeneous <i>pn</i> Junction 368	
7.20.1 Heterostructures 368	
7.20.2 Optical Gains 369	
7.20.3 Determination of Optical Gain 371	
7.21 Rate Equations 372	
7.21.1 Carriers 373	
7.21.2 Photons 374	
7.21.3 Rate Equation Parameters 374	
7.21.4 Derivation of Rate Equation for Electric Field 375	
7.22 Analysis Based on Rate Equations 377	
7.22.1 Steady-State Analysis 377	
7.22.2 Small-Signal Analysis with the Linear Gain Model 378	
7.22.3 Small-Signal Analysis with Gain Saturation 379	
7.22.4 Large-Signal Analysis for QW Lasers 382	
7.22.5 Frequency Chirping 382	
7.22.6 Equivalent Circuit Model for a Bulk Laser 383	
Appendix 7.1: Semiconductor Heterojunctions 423	
Appendix 7.2: Parameters of Selected Semiconductors and Semiconductor Compounds 426	
8. Optical Sources 2— The Light Emitting Diode (LED)	427
8.1 Introduction 427	
8.2 Photoelectric Effect 428	
8.2.1 Photoemissive Effect 428	
8.2.2 Photoconductive Effect 429	
8.2.3 Photovoltaic Effect 430	
8.3 Photodetectors 431	
8.3.1 Photoconductor 432	
8.3.2 Quantum Efficiency (η) 433	
8.3.3 Bandwidth 434	
8.3.4 Noise Equivalent Power (NEP) 435	
8.4 Light Emitting Diodes (LEDs) 437	
8.4.1 LED Construction and Working 438	
8.4.2 Internal and External Quantum Efficiency of an LED 440	
8.4.3 LED Structures: Homojunction and Heterojunction 441	
8.4.4 Characteristics of LED 447	
8.5 Advanced LED Structures 454	
8.5.1 LED Indicator Circuits 457	
8.5.2 Multicolour LEDs 457	
8.5.3 LED Testing 458	
8.5.4 Quantum Efficiency and LED Power 458	
8.5.5 Modulation of an LED 461	
9. Optical Receivers	488
9.1 Introduction 488	
9.2 Principle of Optoelectronic Detection 490	

- 9.3 Optical Receiver 491
 - 9.3.1 Sensitivity 491
 - 9.3.2 Dynamic Range 491
 - 9.3.3 Bit-Rate Transparency 491
 - 9.3.4 Bit-Pattern Independency 491
 - 9.3.5 Optical Receiver Configuration 491
- 9.4 Photodetectors 505
- 9.5 Principles of Photodetection 505
- 9.6 Properties of Semiconductor Photodetectors 507
 - 9.6.1 Quantum Efficiency (η) 507
 - 9.6.2 Responsivity (R) 507
 - 9.6.3 Long-Wavelength Cut-off 509
 - 9.6.4 Response Time 509
 - 9.6.5 Sensitivity 510
- 9.7 Performance Parameters of Photodetectors 510
 - 9.7.1 Dark Current or Leakage Current 510
 - 9.7.2 Quantum Efficiency 511
 - 9.7.3 Responsivity (R) 511
 - 9.7.4 Speed of Response 511
- 9.8 Types of Optical Detectors 511
 - 9.8.1 Phototransistors 511
 - 9.8.2 Photovoltaics 512
 - 9.8.3 Metal-Semiconductor-Metal (MSM) Detectors 513
 - 9.8.4 pn Photodiode 515
 - 9.8.5 $p-i-n$ (PIN) Photodiodes 516
 - 9.8.6 Avalanche Photodiodes 520
- 9.9 Photodetector Noise 521
 - 9.9.1 Shot Noise 523
 - 9.9.2 Thermal Noise 523
 - 9.9.3 Quantum Noise 525
 - 9.9.4 Quantum Limit 525
- 9.10 Receiver Analysis 526
- 9.11 BER of an Ideal Optical Receiver 527
- 10. Optical and Photonic Components—Optical Amplifiers 546**
 - 10.1 Introduction 546
 - 10.2 Semiconductor Optical Amplifiers 547
 - 10.2.1 General Properties of Optical Amplifiers 549
 - 10.2.2 Gain Spectrum and Bandwidth 549
 - 10.2.3 Gain Saturation 551
 - 10.2.4 Amplifier Noise 552
 - 10.2.5 Gain Formula for SOA with Facet Reflectivities 554
 - 10.2.6 The Effect of Facet Reflectivities 555
 - 10.2.7 SOA Rate Equations for Pulse Propagation 556
 - 10.2.8 Pulse Amplification 558
 - 10.2.9 Design of SOA 559
 - 10.2.10 Some Amplifications of SOA 560
 - 10.3 Rare Earth Doped Fiber Amplifiers 566
 - 10.3.1 Erbium-Doped Fiber Optical Amplifiers 566
 - 10.3.2 Steady-State Analysis 569
 - 10.3.3 Effective Two-Level Approach 569
 - 10.3.4 Gain Characteristics of Erbium-Doped Fiber Amplifiers 571
 - 10.3.5 Typical EDFA Characteristics 571
 - 10.3.6 Alternative Model of EDFA 572
 - 10.3.7 Other Rare Earth Doped Fiber Optical Amplifiers 574
 - 10.4 Raman Fiber Optical Amplifiers or Fiber Raman Amplifiers (FRA) 574
 - 10.5 Planer Waveguide Optical Amplifiers 578
 - 10.6 Linear Optical Amplifiers 578
 - 10.7 Basic Applications of Optical Amplifiers 578
 - Appendix: Optical Switches 595**
 - A10.1 Introduction 595
 - A10.2 Opto-Mechanical Switches 595
 - A10.3 Electro-Optic Switches 603
 - A10.4 Thermo-Optic Switches 606
 - A10.5 Acousto-Optic Switches 610
 - A10.6 Micro-Electromechanical System (MEMS) 611
 - A10.7 3D MEMS Based Optical Switches 613
 - A10.8 Micro-Optic Mechanical System (MOMS) 614
- 11. Advanced Optical Communication Systems and Optical Networks—Wavelength Division Multiplexing (WDM) Technology 615**
 - 11.1 Introduction 615
 - 11.2 Time Division Multiplexing 619
 - 11.3 Frequency Division Multiplexing (FDM) 619
 - 11.4 Dense Wavelength Division Multiplexing (DWDM) 619
 - 11.5 Coarse Wavelength Division Multiplexing (CWDM) 620
 - 11.6 Passive Components 620
 - 11.6.1 Couplers 620
 - 11.7 Multiplexers and Demultiplexers 628
 - 11.7.1 Multiplexing and Demultiplexing Using a Prism 630
 - 11.7.2 Multiplexing and Demultiplexing Using a Diffraction Grating 631
 - 11.7.3 Optical Add/Drop Multiplexers/Demultiplexers 631
 - 11.7.4 Arrayed Waveguide Gratings (AWGs) 632
 - 11.7.5 Fiber Bragg Grating (FBG) 633
 - 11.7.6 Thin Film Filters or Multilayer Interference Filters 634

11.7.7 Periodic Filters, Frequency Slicers, Interleavers Multiplexing	634	12.18.2 SONET/SDH Ring Configurations	700
11.7.8 Mach-Zehnder Interferometer	635	12.19 Nonlinear Effects	704
11.8 Active Components	636	12.19.1 Stimulated Raman Scattering	705
11.9 Topologies and Architectures	640	12.19.2 Stimulated Brillouin Scattering (SBS)	706
11.9.1 Point-to-Point WDM Links	640	12.19.3 Four-Wave Mixing	707
11.9.2 Wavelength-Routed Networks	640	12.19.4 Self- and Cross-Phase Modulation	707
11.9.3 WDM Star, Ring, and Meshes	641	12.20 Dispersion	708
11.9.4 Network Reconfigurability	644	12.20.1 Information Capacity Determination	708
12. Fiber Optic Communications	664	12.20.2 Group Delay	708
12.1 Introduction	664	12.20.3 Modal Dispersion	712
12.2 Essential Components of Fiber Communication System	665	12.20.4 Signal Distortion in Single Mode Fibers	712
12.3 Basic Communication System	677	12.20.5 Higher Order Dispersion	713
12.4 Types of Topologies	677	12.20.6 Dispersion Induced Limitations	713
12.5 Types of Networks	678	12.20.7 Basic Propagation Equation	713
12.6 Submarine Cables	682	12.20.8 Chirped Gaussian Pulses	713
12.7 Open system Interconnection (OSI)	683	12.20.9 Limitations of Bit Rate	713
12.8 System Architectures	685	12.20.10 Dispersion Management	713
12.8.1 Point-to-Point Links	685	12.21 Solitons	715
12.8.2 Distributed Networks	685	12.21.1 Nonlinear Effects, i.e. Nonlinear Optical Susceptibility	715
12.9 Line Coding in Optical Links	688	12.21.2 Main Nonlinear Effects	716
12.10 Error Control or Correction	689	12.21.3 Stimulated Raman Scattering	716
12.11 Performance of Passive Linear Optical Networks	690	12.21.4 Derivation of the Nonlinear Schrödinger Equation	716
12.11.1 Power Budget Calculation	691	13. Fiber Optic Measurement and Testing	745
12.11.2 Nearest-Distance Power Budget	691	13.1 Introduction	745
12.11.3 Largest-Distance Power Budget	691	13.2 Measurement Standards	745
12.12 Performance of Star Optical Networks	692	13.3 Testing Photonic Components	746
12.13 SONET and SDH	693	13.4 Optical Power Measurements (Intensity)	748
12.13.1 Purposes and Features of SONET/SDH	694	13.4.1 Optical Power Measurement Units	748
12.14 Multiplexing Terminology and Signaling Hierarchy	695	13.4.2 Optical Power Loss Measurements	748
12.14.1 Existing Multiplexing Terminology and Digital Signalling Hierarchy	695	13.4.3 Crosstalk	749
12.14.2 SONET Multiplexing Terminology and Optical Signaling Hierarchy	695	13.4.4 Polarization Dependent Loss (PDL)	750
12.14.3 SDH Multiplexing Terminology and Optical Signalling Hierarchy	696	13.4.5 Return Loss (RL) or Backreflection	751
12.15 SONET and SDH Transmission Rates	696	13.4.6 Temperature Dependent Loss	751
12.16 SONET Systems	698	13.4.7 Wavelength Dependent Loss	752
12.17 Metro and Long-Haul Optical Networks	699	13.4.8 Chromatic Dispersion	752
12.18 Network Configuration	700	13.4.9 Optical Frequency Measurements	754
12.18.1 Automatic Protection Switching (APS)	700	13.5 Testing Optical Fiber Switches	754
		13.5.1 Mechanical Tests	754
		13.5.2 Environmental Tests	755
		13.5.3 Repeatability Test	755
		13.5.4 Speed Test	756

13.6 Light Wavelength Measurements	757	13.11 Characterization Techniques of Optical Fiber	765
13.7 Device Power Handling Tests	757	13.11.1 Attenuation and Its Measurement	766
13.8 Troubleshooting	757	13.11.2 Dispersion Measurement	767
13.9 Sources of Error During Fiber Optic Measurements	758	13.11.3 Measurements with Optical Time Domain Reflectometer (OTDR)	771
13.9.1 Resolution	758	13.12 Eye Diagram Tests	772
13.9.2 Accuracy	758	Suggested Reading	775
13.9.3 Stability (Drift)	758	Appendices	777
13.9.4 Linearity	759	Appendix A: List of Abbreviations	777
13.9.5 Repeatability Error	759	Appendix B: Physical Constants	779
13.9.6 Reproducibility	759	Appendix C: Standard International (SI) Units	779
13.10 Optical System Test Equipment/ Instruments	760	Appendix D: Bessel Functions	780
13.10.1 Optical Power Meter	760	Appendix E: Some Useful Mathematical Relations	782
13.10.2 Fiber Optical Power Attenuators	761	Index	785
13.10.3 Test-Support Lasers: Tunable Laser Sources	762		
13.10.4 Optical Spectrum Analyzer (OSA)	762		
13.10.5 Optical Time Domain Reflectometer (OTDR)	764
