Foreword *v*
Preface *xi*

1. Preliminary Concepts **1–26**

1.1 Introduction 1
1.2 Outline 1
1.3 Cartesian Product of Sets and Relations 3
1.4 Functions 5
1.5 Binary Operations 7
1.6 Groups 9
1.7 Rings and Fields 12
1.8 Matrices 14
1.9 Determinants 22
1.10 Systems of Linear Equations 23
1.10.1 Systems of Equations in Triangular Form 25
1.10.2 Systems of Equations in Echelon Form 25
1.11 Rank of a Matrix 26

2. Linear Equations **27–75**

2.1 Introduction 27
2.2 Fields 27
2.3 Finding a Solution Set 28
2.4 Systems of Linear Equations 29
2.5 Operations on Matrices 35
2.5.1 Sum and Difference of the Matrices 35
2.5.2 Scalar Multiple of Matrix 36
2.6 Matrix Product as Linear Combinations 37
2.7 Matrix Form of a Linear System 39
2.8 Row-Reduced Echelon Matrices 41
2.9 Invertible Matrices 49
2.10 Solution of Linear system by *LU*-Decomposition 56
2.11 Applications of Linear Equations I 69

2.12 Applications of Linear Equations II 72
2.12.1 Linear Equation in Mechanical Engineering Application 73

3. Systems of Equations and Matrices 76–128
3.1 Introduction 76
3.2 Homogeneous Systems of Linear Equations 90
3.3 Matrix Arithmetic and Operations 93
3.4 Non-Homogeneous Equations 102
3.5 Properties of Matrix Arithmetic 104
3.6 Properties of Matrix Exponents 106
3.7 Finding Inverse Matrices 115
3.8 Special Matrices 124

4. Vector Spaces 129–185
4.1 Introduction 129
4.2 Essential Example 130
4.3 Vector Space Axioms 131
4.4 Linear Independence 142
4.5 Basis and Dimension 147
4.6 Change of Basis 149
4.7 Fundamental Subspaces 157
4.8 Fields 161
4.9 Vector Subspaces 167
4.10 Algebra of Subspaces 169
4.11 Linear Combination of Vectors 170
4.12 Coordinates 175
4.13 Summary of Row Equivalence 179
4.14 Computation Concerning Subspaces 181
4.15 Applications of Vector-Space 182

5. Basis and Dimension 186–199
5.1 Introduction 186
5.2 Finite Dimensional Vector Spac 190

6. Linear Transformations 200–251
6.1 Introduction 200
6.2 Properties of a Linear Transformation 206
6.3 Matrix of a Linear Transformation 213
6.4 Rank Nullity of a Linear Transformation 219
6.4.1 Range Space 219

6.4.2 Null Space 219
6.4.3 Nullity 221
6.5 Singular and Non-Singular Linear Transformation 229
6.6 Eigenvalues and Eigenvectors of a Linear Transformation 229
6.7 Isomorphic Vector Spaces 234
6.8 Linear Transformation and its Application 239

7. Inner Product Spaces 252–290

7.1 Introduction 252
7.2 Inner product spaces 252
7.3 Norm or Length of a Vector 258
7.4 Angle Between Vectors 262
7.5 Orthogonality 265
7.6 Orthogonal Sets 269
7.7 Orthogonal Basis 269
7.8 Projections 273
7.9 Gram-Schmi Orthogonalization Process 276
7.10 *QR*-Factorization of Matrices 281
7.11 Least-Squares Problems 283

8. Standard Euclidean Inner Product 291–328

8.1 Introduction 291
8.2 Orthonormal Basis 296
8.3 Least Squares 302
8.4 *QR*-Decomposition 305
8.5 Eigenvalues and Eigenvectors 312

9. Diagonalization 329–352

9.1 Introduction 329
9.2 Reduction to Diagonal Form 329
9.3 Similarity of Matrices 330
9.4 Powers of a Matrix 330
9.5 Reduction of Quadratic Form to Canonical Form 331
9.6 Nature of Quadratic Form 332
9.7 Quadratic Forms 336

10. Elementary Canonical Forms 353–376

10.1 Introduction 353

10.2 The Primary Decomposition Theorem 353
10.3 Jordan Canonical Form 355
10.4 Interactive Estimates for "Eigenvalues" 359
10.5 Characteristic Values 361
10.6 Annihilating Polynomial 364
10.7 Direct Sum Decomposition 367
10.8 Singular Value Decomposition 370

11. Modules 377–444

11.1 Introduction 377
11.2 Definition and Examples 377
11.3 Elementary Properties of Modules 392
11.4 Submodules 394
11.5 Finitely Generated Submodule 396
11.6 Algebra of Submodules 398
11.7 Quotient Modules 406
11.8 *R*-Homomorphisms 410
11.9 Algebra 425
11.10 Free Modules 426
11.11 Free Modules and Matrices 432
11.12 Cyclic Modules 435
11.13 Noetherian and Artinian Modules 439

Index *445*
