

Contents

Preface

vii

Index of Competencies

xvii

Section I: General Physiology

1. Importance and Scopes of Physiology in Medicine	2
2. Structure and Function of a Cell and Intercellular Communication	5
3. Principles of Homeostasis	17
4. Physiology of Apoptosis	24
5. Transport Mechanisms Across the Cell Membrane	28
6. Body Fluids	44
7. Concept of pH, Buffer System of the Body, and Physiological Basis of Acid–Base Disorders	51
8. Membrane Potential	58

Section II: Blood

9. Composition and Functions of Blood, and Plasma Proteins	66
10. Bone Marrow and Hemopoiesis	72
11. Red Blood Cells: Structure, Functions, Development (Erythropoiesis), and Destruction	78
12. Hemoglobins and Red Blood Cell Indices	89
13. Pathophysiology of Anemia, Polycythemia and Jaundice	95
14. Blood Groups and Physiological Basis of Blood Transfusion	103
15. White Blood Cells (Leukocytes)	113
16. Physiology of Immunity	125
17. Platelets (Thrombocytes)	138
18. Blood Coagulation	146

Section III: Nerve and Muscle

19. Structure and Functions of Neuron, Nerve Potentials, and Propagation of Nerve Impulse	158
20. Properties and Classification of Nerve Fibers, Nerve Injury and Other Applied Aspects	170
21. Neuromuscular Transmission and its Applied Aspects	176
22. General Organization of Skeletal Muscle, and Mechanisms of Muscle Contraction	183
23. Properties of Skeletal Muscle and Applied Aspects including Myopathy	195
24. Smooth Muscle: Structure, Mechanism of Contraction and Properties	204

Section IV: Autonomic Nervous System

25. Functional Organization and Functions of Sympathetic and Parasympathetic Systems	212
26. Autonomic Dysfunctions, Autonomic Function Tests and Spectral Analysis of Heart Rate Variability	221

Section V: Gastrointestinal (GI) System

Part I: Introduction and Functional Organization

- | | |
|---|-----|
| 27. Functional Organization of GI System and Principles of GI Regulations | 228 |
| 28. Gastrointestinal Hormones | 233 |

Part II: GI Secretions

- | | |
|--|-----|
| 29. Principles of Gastrointestinal Secretion and Secretion of Saliva | 239 |
| 30. Gastric Secretion | 245 |
| 31. Pancreatic Secretion | 255 |
| 32. Hepatobiliary System and Biliary Secretion | 263 |
| 33. Intestinal Secretion and Gut–Brain Axis | 270 |

Part III: GI Motility

- | | |
|--|-----|
| 34. Introduction to Gastrointestinal Motility | 277 |
| 35. Chewing, Deglutition and Esophageal Motility | 282 |
| 36. Gastric Motility | 286 |
| 37. Intestinal Motility and Motility of Colon, Rectum and Anal Canal | 294 |

Part IV: Digestion and Absorption

- | | |
|--|-----|
| 38. Digestion and Absorption of Nutrients, and Importance of Dietary Fiber | 301 |
|--|-----|

Section VI: Cardiovascular System

Part I: General Introduction

- | | |
|--|-----|
| 39. Functional Organization of Cardiovascular System | 308 |
|--|-----|

Part II: The Heart

- | | |
|---|-----|
| 40. Functional Anatomy of Heart, Cardiac Muscle and Cardiac Innervation | 313 |
| 41. Properties of Cardiac Muscle | 320 |
| 42. Electrophysiology of the Heart, and Origin and Propagation of Cardiac Impulse | 325 |
| 43. Electrocardiogram | 335 |
| 44. Abnormal ECG | 348 |
| 45. Cardiac Cycle | 356 |
| 46. Cardiac Output | 364 |
| 47. Heart Rate and Arterial Pulse | 375 |

Part III: Circulation

- | | |
|--|-----|
| 48. Principles of Hemodynamics, Arterial System and Venous System | 381 |
| 49. Capillary Circulation, Lymphatic Circulation and Pathophysiology of Edema Formation | 391 |
| 50. Blood Pressure and its Regulation | 398 |
| 51. Local and Systemic Cardiovascular Regulatory Mechanisms | 412 |
| 52. Regional (Cerebral, Coronary, Cutaneous, Splanchnic, Skeletal) Circulations and Fetal and Neonatal Circulation | 416 |

Part IV: Applied and Clinical Aspects of CVS

- | | |
|---|-----|
| 53. Pathophysiology of Hypertension and Hypotension | 427 |
| 54. Pathophysiology of Shock and Syncope | 431 |
| 55. Pathophysiology of Heart Failure | 438 |

Section VII: Respiratory System

56. Functional Organization of Respiratory System	444
57. Mechanics of Breathing, Alveolar Surface Tension and Airway Resistance	450
58. Alveolar Ventilation and Gas Exchange in Lungs	467
59. Pulmonary Circulation and Ventilation–Perfusion Ratio	473
60. Transport of Gases in Blood	480
61. Regulation of Respiration	488
62. Physiological Changes at High Altitude and Acclimatization	500
63. Dyspnea, Hypoxia, Cyanosis, Asphyxia, Drowning, Periodic Breathing and Oxygen Therapy	504
64. Hazards of Deep Sea Diving and Effects of Increased Barometric Pressure	512
65. Artificial Ventilation and Cardiopulmonary Resuscitation	516
66. Pulmonary Function Tests	521

Section VIII: Endocrine Physiology

67. Introduction to Endocrinology	528
68. Mechanisms of Hormone Action	534
69. Hypothalamus and Hypothalamic-Pituitary Axis	544
70. Anterior Pituitary	548
71. Posterior Pituitary	558
72. Thyroid Gland	565
73. Adrenal Cortex	577
74. Adrenal Medulla	592
75. Endocrine Pancreas, Blood Glucose Homeostasis and Diabetes	599
76. Calcium and Phosphate Metabolism, Physiology of Bone and Parathyroid Gland	614
77. Thymus, Pineal Gland and Local Hormones	627

Section IX: Reproductive System

78. Sex Differentiation, Development and Physiology of Puberty and Menopause	634
79. Male Reproductive System, Spermatogenesis and Testicular Hormones	645
80. Female Reproductive System, Oogenesis, Folliculogenesis, Ovulation, Menstrual Cycle, Ovarian Hormones and Control of Ovarian Functions	658
81. Physiology of Copulation	675
82. Physiology of Pregnancy, Parturition, and Breast Development and Lactation	682
83. Physiology of Contraception	691

Section X: Renal System

84. General Introduction and Functional Anatomy of Kidney	696
85. Renal Blood Flow and Glomerular Filtration	706
86. Tubular Functions	717
87. Mechanisms of Urine Concentration and Dilution	732
88. Renal Water Excretion, Diuresis and Diuretics	739
89. Acidification of Urine	743

90. Renal Function Tests, Renal Failure, Artificial Kidneys and Dialysis, and Renal Transplant	748
91. Physiology of Micturition and Bladder Dysfunctions	752

Section XI: Neurophysiology

Part I: Introduction to Neurophysiology

92. Functional Organization of Nervous System	758
93. Synaptic Transmission in Central Nervous System and Neurotransmitters	764

Part II: Sensory System

94. Introduction to Sensory System and Physiology of Receptors	775
95. Spinal Cord Organization and Ascending Pathways	781
96. Physiology of Pain, Itch, Temperature and Trigeminal System	789
97. Thalamus	803
98. Sensory Cortex, Spinal Cord Lesions and Applied Sensory Physiology	809

Part III: The Motor System

99. Segmental Organization of Motor System, Muscle Spindle and Golgi Tendon Organ	815
100. Spinal Reflexes	824
101. Descending Pathways	832
102. Regulation of Posture and Movement	840
103. Cerebellum	850
104. Basal Ganglia	859
105. Vestibular Apparatus	868

Part IV: Hypothalamus, EEG and Sleep; Limbic and Higher Functions; CSF

106. Functions of Hypothalamus	873
107. Reticular Activating System, Electroencephalogram and Physiology of Sleep	878
108. Limbic System	890
109. Physiology of Learning and Memory	896
110. Physiology of Language and Speech	905
111. Association Cortex, Cerebral Asymmetry, Lobes of the Brain and Cortical Plasticity	910
112. Cerebrospinal Fluid	916

Section XII: Special Senses

Part I: Vision

113. Functional Anatomy of Eye	922
114. Image Forming Mechanisms	929
115. Photoreceptor Mechanisms	935
116. Visual Acuity, Visual Field, Visual Pathway and Visual Cortex	940
117. Visual Adaptations and Visual Reflexes	947
118. Color Vision	952
119. Movements of the Eye	957

Part II: Hearing

120. Functional Anatomy and Functions of the Ear	961
121. Auditory Pathways	968
122. Mechanisms of Hearing	972
123. Hearing Defects and Hearing Tests	979

Part III: Smell and Taste

124. Physiology of Smell	983
125. Physiology of Taste	988

Section XIII: Integrated Physiology

126. Regulation of Body Temperature and Acclimatization to Hot and Cold Environments	996
127. Physiology of Exercise and Sports Science	1006
128. Physiology of Infancy, Growth Pattern, and Aging	1016
129. Physiology of Nutrition, Consequences of Sedentary Lifestyle, Obesity and Metabolic Syndrome	1024
130. Physiology of Yoga and Meditation	1030

Special Section

1. Early Clinical Exposure (ECE) in Physiology	1040
2. Normal Values and Physiological Variations of Common Parameters	1057

<i>Bibliography</i>	1064
----------------------------	------

<i>Index</i>	1065
