Preface

v

## Section I GENERAL CONSIDERATION AND BIOLOGICAL ASPECTS

<b>1. Origin of Genetics</b>	<b>3-11</b>
<hr/>	
Introduction	3
Pre-Mendelian Ideas on Heredity	3
Mendel	5
Mendel's Model System: The Pea Plant	7
Mendel's Experimental Setup	10
Invention of Recombinant DNA Technology	10
Genomics Grew Out of Recombinant DNA Technology	11
<b>2. Mendelian Genetics</b>	<b>12-46</b>
<hr/>	
Introduction	12
Heredity before Mendel	12
Mendel and the Laws of Heredity	14
Mendel in the Modern World	19
Supplemental Material in Mendelian Genetics	19
Monohybrid Cross	29
Dihybrid Cross	33
Law of Independent Assortment	34
Independent Assortment vs Linkage	34
Probabilities in Genetics	35
Chi-square Analysis	38
Pedigree Analysis	45
<b>3. Extensions of Mendelian Analysis</b>	<b>47-91</b>
<hr/>	
Introduction	47
Variations Involving Single Gene	47
Variations Involving Multiple Genes	53
Geneticists Use a Variety of Symbols for Alleles	56
Incomplete Dominance	61
Heterozygous	63
Multiple Alleles and their Characteristics	64
One Gene and Many Phenotypes	71
Complementation Analysis	78
Genetics and Epigenetics of the X Chromosome	81
Sex-limited Genes	87

---

**4. Genetics: An Overview** **92-99**

---

Introduction 92  
DNA 92  
Genes 93  
Chromosomes 93  
Genetic Material 95  
Transmission of Genetic Material 96  
Genetics in Everyday Life 97

**5. Molecular Genetics** **100-116**

---

Introduction 100  
Epigenetic Mechanisms Regulating Gene Expression 100  
Gene Families 104  
Repetitive DNA 109  
Molecular Genetics of Disease and the Human Genome Project 113  
Gene Prediction 116

**Section II**  
**CELL CYCLE, MEIOSIS AND MITOSIS**

---

**6. Cell Cycle, Meiosis and Mitosis** **119-128**

---

Introduction 119  
Cell Cycle 120  
M Phase 121  
Significance of Mitosis 124  
Meiosis 124  
Significance of Meiosis 127  
Chromosome Segregation during Mitosis and Meiosis 127

---

**7. Crossing Over and Meiosis** **129-142**

---

Introduction 129  
General Outline of Meiosis 129  
Crossing Over and Chiasmata 131  
Terminalisation 132  
Germ Cells of Animals 135  
Germ Cells of Plants 137  
Detailed Stages of Meiosis 137  
Diploid Parthenogenesis and Meiosis 138

**Section III**  
**SEX DETERMINATION, SEX CHROMOSOMES, SEX AND HEREDITY AND**  
**SEX DETERMINATION SYSTEMS**

---

**8. Sex Determination and Sex Chromosomes** **145-167**

---

Introduction 145  
Sex Chromosomes 145  
Fragile X Syndrome 152  
Colour Blindness 153

Position Effect	155
Chromosomal Abnormalities in Cancer	156
Sex Determination and Differentiation in Vertebrates	157
Environmental Sex Determination (ESD)	157
Chromosomal Sex Determination (CSD)	159
SRY (Sex Determining Region on Y Chromosome)	160
SOX 9 (SRY-related High-mobility Group BOX 9)	161
SF1 (Steroidogenic Factor 1)	161
WT1 (Wilms' Tumour 1)	162
GATA4/FOG2	162
DMRT 1 (Double Sex and MAB-3 Related Transcription Factor)	162
DAX 1 (DSS-AHC Critical Region on X Chromosome, 1)	162
WNT 4	163
Sex Differentiation	164

---

## **9. Sex and Heredity** **168–180**

Introduction	168
X-linked Inheritance	168
Sex Influenced Inheritance	171
Sex Limited Inheritance	171
Cytoplasmic Inheritance	172
X Chromosome Inactivation	173
Epigenetics	174
Epigenetic Changes—Molecular Modifications	174
Non-coding RNAs	176
Epigenetic Phenomena	176
Significance of Epigenetic Effects	179

---

## **10. Sex Determination Systems** **181–198**

Introduction	181
Chromosomal Systems	181
Evolution	186
XY Sex Determination System	186
Sexual Differentiation in Humans	189
Sexual Differentiation	193
Temperature Dependent Sex Determination	194

### **Section IV**

### **CHROMOSOME MUTATIONS, CHROMATIN AND EXTRACHROMOSMAL DNA**

---

## **11. Chromosome Mutations** **201–212**

Introduction	201
Chromosome Mutations	201
Structural Chromosome Aberrations	202
Numerical Chromosome Aberrations	207
Uniparental Disomy (UPD)	211
Mixoploid Mutations	211

---

## **12. Chromosomes and Chromatin and Genetic Linkage** **213–231**

Introduction	213
Chromatin is Divided into Euchromatin and Heterochromatin	215

- Cell Cycle and Replication of Genome 216
- Implications of DNA Replication for Stable States of Transcriptional Activity 216
- Genetic Linkage 226
- Discovery of Genetic Linkage 227

---

**13. Extrachromosomal DNA 232–256**

- Introduction 232
- Prokaryotes 232
- Eukaryotes 234
- Viruses 236
- Inheritance 236
- Medicine and Disease 237
- Replication of Linear Genomes 237
- N-terminus 239
- C-terminus 241
- Rolling Circle Replication 242
- Bacterial Conjugation 243
- DNA/Conjugation 246
- Variation in Chromosome Number and Structure 247
- Chromosome Number 249
- Chromatin 251
- Human Chromosome 253
- Giant Chromosomes 254

**Section V**

**BACTERIOPHAGE MECHANISMS OF BACTERIAL MUTATION AND GENETICALLY MODIFIED BACTERIOPHAGES AND BACTERIOPHAGES IN CHEMOTHERAPY AND MEDICINES**

---

**14. Structure of Bacteriophages 259–283**

- Introduction 259
- Viruses 260
- Classification of Bacteriophages 262
- ICTV Classification of Phages 264
- Organisation of Tailed Bacteriophages 267
- Methods for Study of Bacteriophages 268
- Examples of Bacteriophage Structures 270
- Bacterial Genetics 279
- Multifunctionality of Bacteriophages 280
- Main Bacteriophage Groups Used in Environmental Studies 281
- Available Methodology for Bacteriophage Detection, Enumeration and Propagation 282

---

**15. Mechanism of Bacterial Mutation and Mutant Detection Methods 284–294**

- Introduction 284
- Types of Mutations 285
- Isolation and Identification of Mutants 292

---

**16. Genetically Modified Bacteriophages and their Ecology 295–311**

- Introduction 295
- Synthetic Biology Technologies for Phage Engineering 296
- Applications of Engineered Phages 298

Natural Phages 302  
Bacteriophage Ecology and Plants 303

---

**17. Bacteriophages in Chemotherapy and Medicines 312–324**

---

Introduction 312  
Bacteriophages in Chemotherapy 313  
Benefits of Phage Therapy over Antibiotics 317  
Safety of the Therapeutic Phage Preparation 318  
Clinical Application of Bacteriophages 319  
Phage Application in Food Industry 323  
Phages as Antibacterial Nanomedicines 324

**Section VI****DNA STRUCTURE, DNA REPLICATION AND GENETIC TECHNIQUES FOR DNA ANALYSIS**

---

**18. DNA Structure and Analysis 327–375**

---

Introduction 327  
DNA Structure 327  
Characteristics and Properties of Genetic Material 334  
DNA As a Genetic Material 336  
DNA Virus 337  
Morphology and General Properties of Viruses 358  
Retrovirus 361  
Methods for Detecting Protein–RNA Interactions 362  
Nucleic Acid Electrophoresis 365  
Gel Electrophoresis of Nucleic Acids 371

---

**19. DNA Replication 376–404**

---

Introduction 376  
Origin of Replication 376  
Types of Replication 376  
DNA Replication 378  
Fidelity of DNA Replication and Mismatch Repair 381  
Semiconservative Replication 383  
Enzymes Involved in DNA Replication of Prokaryotes 385  
Eukaryotic DNA Replication 387  
Prokaryotic DNA Replication 402  
Linear Chromosome 403

---

**20. Genetic Techniques for DNA Analysis 405–413**

---

Introduction 405  
Basic Tools and Techniques 405  
Types of DNA Polymorphisms 408

**Section VII****GENETIC CODE AND TRANSCRIPTION, RNA EDITING AND RNA POLYMERASE**

---

**21. Genetic Code 417–435**

---

Introduction 417  
Cracking the Genetic Code 417

Decoding the Codons and Role of Transfer RNAs 422  
Translating Genetic Information 423  
Characteristics of the Genetic Code 425  
Nirenberg and Matthaei Experiment 426  
Important Properties of Genetic Code 428  
Bacteriophage MS2 430  
Genetic Code is Universal 432  
DNA and RNA 432  
Overlapping Genes 433

---

**22. Transcription, RNA Editing and RNA Polymerase** **436–456**

---

Introduction 436  
Transcription or Synthesis of RNA over DNA Template 438  
Transcription in Prokaryotes 440  
RNA Editing 442  
RNA Polymerase 446  
Transmission Electron Microscopy DNA Sequencing 452

*References* 457–458

*Index* 459–466
