PART I: PROBABILITY AND RANDOM VARIABLES

Chapter 1	The Meaning of Probability	3
1-1	Introduction	3
1-2	The Definitions	5
1-3	Probability and Induction	11
1-4	Causality Versus Randomness	13
Chapter 2	The Axioms of Probability	15
2-1	Set Theory	15
2-2	Probability Space	19
2-3	Conditional Probability/Problems	28
Chapter 3	Repeated Trials	46
3-1	Combined Experiments	46
3-2	Bernoulli Trials	51
3-3	Bernoulli's Theorem and Games of Chance/Problems	58
Chapter 4	The Concept of a Random Variable	72
4-1	Introduction	72
4-2	Distribution and Density Functions	75
4-3	Specific Random Variables	83
4-4	Conditional Distributions	98
4-5	Asymptotic Approximations for Binomial Random Variable/Problems	105
Chapter 5	Functions of One Random Variable	123
5-1	The Random Variable $g(x)$	123
5-2	The Distribution of $g(x)$	124
5-3	Mean and Variance	140
5-4	Moments	146
5-5	Characteristic Functions/Problems	152
Chapter 6	Two Random Variables	169
6-1	Bivariate Distributions	169
6-2	One Function of Two Random Variables	180
6-3	Two Functions of Two Random Variables	197
6-4	Joint Moments	209

	6-5 Joint Characteristic Functions	215
	6-6 Conditional Distributions	220
	6-7 Conditional Expected Values/Problems	231
Chapter 7	Sequences of Random Variables	243
	7-1 General Concepts	243
	7-2 Conditional Densities, Characteristic Functions, and Normality	252
	7-3 Mean Square Estimation	261
	7-4 Stochastic Convergence and Limit Theorems	272
	7-5 Random Numbers: Meaning and Generation/Problems	284
Chapter 8	Statistics	303
	8-1 Introduction	303
	8-2 Estimation	306
	8-3 Parameter Estimation	320
	8-4 Hypothesis Testing/Problems	354
PART II: STOCHASTIC PROCESSES		
Chapter 9	General Concepts	373
	9-1 Definitions	373
	9-2 Systems with Stochastic Inputs I	393
	9-3 The Power Spectrum	408
	9-4 Discrete-Time Processes/Appendix 9A Continuity, Differentiation, Integration/Appendix 9B Shift Operators and Stationary Processes/Problems	420
Chapter 10	Random Walks and Other Applications	435
	10-1 Random Walks	435
	10-2 Poisson Points and Shot Noise	453
	10-3 Modulation	463
	10-4 Cyclostationary Processes	473
	10-5 Bandlimited Processes and Sampling Theory	476
	10-6 Deterministic Signals in Noise	483
	10-7 Bispectra and System Identification/Appendix 10A The Poisson Sum Formula / Appendix 10B The Schwarz Inequality/Problems	488
Chapter 11	Spectral Representation	499
	11-1 Factorization and Innovations	499
	11-2 Finite-Order Systems and State Variables	502
	11-3 Fourier Series and Karhunen-Loève Expansions	509
	11-4 Spectral Representation of Random Processes/Problems	513

Chapter 12	Spectrum Estimation	523
	12-1 Ergodicity	523
	12-2 Spectrum Estimation	537
	12-3 Extrapolation and System Identification	548
	12-4 The General Class of Extrapolating Spectra and Youla's Parametrization/Appendix 12A Minimum- Phase Functions/Appendix 12B All-Pass Functions I Problems	562
Chapter 13	Mean Square Estimation	580
	13-1 Introduction	580
	13-2 Prediction	587
	13-3 Filtering and Prediction	606
	13-4 Kalman Filters / Problems	613
Chapter 14	Entropy	629
	14-1 Introduction	629
	14-2 Basic Concepts	638
	14-3 Random Variables and Stochastic Processes	652
	14-4 The Maximum Entropy Method	664
	14-5 Coding	673
	14-6 Channel Capacity/Problems	684
Chapter 15	Markov Chains	695
	15-1 Introduction	695
	15-2 Higher Transition Probabilities and the Chapman-Kolmogorov Equation	705
	15-3 Classification of States	715
	15-4 Stationary Distributions and Limiting Probabilities	727
	15-5 Transient States and Absorption Probabilities	739
	15-6 Branching Processes I Appendix 15A Mixed Type Population of Constant Size I Appendix 15B Structure of Periodic Chains I Problems	755
Chapter 16	Markov Processes and Queueing Theory	773
	16-1 Introduction	773
	16-2 Markov Processes	774
	16-3 Queueing Theory	784
	16-4 Networks of Queues/Problems	820
	<i>Bibliography</i>	835
	<i>Index</i>	837
