PART I Problems and Search Techniques

Chapter 1 Introduction to Artificial Intelligence	3
1.1 What is Artificial Intelligence?.....	3
1.1.1 Four Classical Views of Artificial Intelligence.....	4
1.1.2 From Human Imitation to Rational Agents.....	6
1.1.3 Intelligence as Problem-Solving and Decision-Making	6
1.2 Historical Evolution of Artificial Intelligence	7
1.2.1 Early Philosophical and Mathematical Roots of Artificial Intelligence	7
1.2.2 The 1950s: The Birth of Artificial Intelligence.....	8
1.2.3 1956: The Dartmouth Conference.....	10
1.2.4 1960s–1970s: Symbolic AI and Search-Based Problem-Solving	10
1.2.5 1980s: Expert Systems and Knowledge Engineering.....	11
1.2.6 1990s–2000s: Probabilistic Artificial Intelligence and Decision Theory	12
1.2.7 2000s–Present: Learning-Driven Artificial Intelligence	13
1.3 Current Status and Scope of Artificial Intelligence	14
1.3.1 Current Status of Artificial Intelligence	14
1.3.2 Scope of Artificial Intelligence.....	15
Student Assignment	16
Chapter 2 Intelligent Agents	19
2.1 Foundations of Intelligent Agents	19
2.1.1 Agent–Environment Interaction.....	20
2.1.2 Agent Function	21
2.1.3 Agent Program	22

2.1.4	Multi-Agent Systems	22
2.1.5	Types of Intelligent Agents	24
2.1.6	Agents as the Foundation of Artificial Intelligence	34
2.2	Task Environments	35
2.2.1	Fully Observable versus Partially Observable Environments	35
2.2.2	Deterministic versus Stochastic Environments	37
2.2.3	Episodic versus Sequential Environments	38
2.2.4	PEAS Description of Task Environments.....	40
2.3	Performance Measures and Rationality	42
2.3.1	Performance Measures.....	43
2.3.2	Bounded Rationality	44
	Student Assignment	45
Chapter 3	Problem-Solving as State-Space Search	48
3.1	Problem Formulation	48
3.1.1	Role of Abstraction	49
3.1.2	Impact on Search Performance.....	51
3.2	State Space, Initial State, and Goal State.....	51
3.2.1	State Space	52
3.2.2	Initial State	53
3.2.3	Goal State	55
3.2.4	Relationship between State Space, Initial State, and Goal State.....	56
3.3	Actions, Transitions, and Costs	58
3.3.1	Actions	59
3.3.2	Transition Model	61
3.3.3	Path Cost.....	62
3.4	Search Trees versus Search Graphs	65
3.4.1	Search Trees.....	65
3.4.2	Search Graphs.....	67
3.5	Solution Quality and Optimality	69
3.5.1	Solution.....	70
3.5.2	Optimal Solution	70
3.5.3	Trade-offs in Practice.....	70
3.6	Randomized Search Strategies.....	71
3.6.1	Motivation for Randomization in Search	71
3.6.2	Random Walks in State Space	72
3.6.3	Stochastic Local Search.....	72
3.6.4	Random Restart Strategies	74
3.6.5	Advantages and Limitations of Randomized Search	74
3.6.6	Randomized Search for Minimizing a Cost Function	75
	Student Assignment	77

Chapter 4	Uninformed Search Techniques	80
4.1	Characteristics of Uninformed Search	81
4.2	Common Uninformed Search Techniques	81
4.3	Breadth-First Search	82
4.3.1	Intuition Behind Breadth-First Search.....	82
4.3.2	Algorithm: Breadth-First Search.....	83
4.3.3	Properties of Breadth-First Search	83
4.3.4	Strengths and Limitations.....	84
4.3.5	When to Use Breadth-First Search.....	84
4.3.6	Illustration of Breadth-First Search	85
4.4	Depth-First Search	87
4.4.1	Intuition Behind Depth-First Search.....	87
4.4.2	Algorithm: Depth-First Search.....	87
4.4.3	Properties of Depth-First Search.....	88
4.4.4	Strengths and Limitations.....	89
4.4.5	When to Use Depth-First Search.....	89
4.4.6	Illustration of Depth-First Search.....	89
4.5	Depth-Limited Search.....	92
4.5.1	Intuition Behind Depth-Limited Search.....	92
4.5.2	Algorithm: Depth-Limited Search.....	92
4.5.3	Properties of Depth-Limited Search.....	92
4.5.4	Strengths and Limitations.....	93
4.5.5	When to Use Depth-Limited Search	93
4.5.6	Illustration of Depth-Limited Search.....	94
4.6	Uniform-Cost Search	96
4.6.1	Intuition Behind Uniform-Cost Search	96
4.6.2	Algorithm: Uniform-Cost Search	97
4.6.3	Properties of Uniform-Cost Search	97
4.6.4	Strengths and Limitations.....	98
4.6.5	When to Use Uniform-Cost Search.....	98
4.6.6	Illustration of Uniform-Cost Search	99
4.7	Iterative Deepening Search	101
4.7.1	Intuition Behind Iterative Deepening Search	102
4.7.2	Algorithm: Iterative Deepening Search.....	102
4.7.3	Properties of Iterative Deepening Search	102
4.7.4	Strengths and Limitations.....	103
4.7.5	When to Use Iterative Deepening Search.....	103
4.7.6	Illustration of Iterative Deepening Search	103
4.8	Bidirectional Search.....	105
4.8.1	Intuition Behind Bidirectional Search	106
4.8.2	Algorithm: Bidirectional Search	106

4.8.3	Properties of Bidirectional Search	107
4.8.4	Strengths and Limitations	107
4.8.5	When to Use Bidirectional Search	108
4.8.6	Illustration of Bidirectional Search	108
4.9	Comparison of Search Algorithms	110
	Student Assignment	112
Chapter 5	Informed Search and Heuristics	115
5.1	Motivation for Heuristic Search	115
5.2	Heuristic Functions	117
5.2.1	Role of Heuristics in Search	117
5.2.2	Characteristics of a Good Heuristic	120
5.3	Properties of Heuristics	120
5.3.1	Admissibility	121
5.3.2	Consistency	122
5.4	Best-First Search	123
5.4.1	Intuition Behind Best-First Search	124
5.4.2	Algorithm of Best-First Search	124
5.4.3	Greedy Best-First Search as a Special Case	124
5.4.4	Significance of Best-First Search	125
5.5	A* Search Algorithm	128
5.5.1	Evaluation Function in A*	128
5.5.2	Algorithm: A* Search	129
5.5.3	Properties and Guarantees of A*	129
5.5.4	Weighted A* Search	132
5.6	Heuristic Design and Evaluation	134
5.6.1	Approaches to Heuristic Design	135
5.6.2	Evaluation of Heuristics	140
5.6.3	Trade-Offs in Heuristic Design	142
	Student Assignment	143
Chapter 6	Local Search and Optimization	146
6.1	Motivation for Local Search	146
6.1.1	Scalability and Memory Efficiency	147
6.1.2	Continuous and High-Dimensional Domains	147
6.1.3	Trade-Off Between Guarantees and Efficiency	147
6.2	Hill-Climbing Algorithm	148
6.2.1	Algorithmic Procedure	149
6.2.2	Interpretation and Structural Limitation	150
6.2.3	Variants of Hill Climbing	150
6.2.4	Problems with Hill Climbing	152
6.3	Simulated Annealing	153
6.3.1	Role of Temperature and Cooling	153

6.3.2	Algorithm of Simulated Annealing	155
6.3.3	Advantages and Limitations of Simulated Annealing	157
6.4	Beam Search.....	158
6.4.1	Algorithm of Beam Search	159
6.4.2	Advantages and Limitations of Beam Search	161
6.4.3	Applications and Practical Usage	161
6.5	Local Search in Continuous Spaces	162
6.5.1	Nature of Continuous Search Spaces.....	163
6.5.2	Evaluation Functions and Landscapes	163
6.5.3	Generating Neighbors in Continuous Domains.....	163
6.5.4	Local Improvement and Termination.....	164
6.5.5	Algorithm: Generic Local Search in Continuous Spaces	164
6.5.6	Advantages and Challenges.....	169
6.6	Comparison of Local Search Techniques	170
6.7	Choosing an Appropriate Technique	171
	Student Assignment	172
Chapter 7	Adversarial Search and Game Playing	175
7.1	Games as Search Problems	175
7.2	Game Trees and Strategies.....	178
7.2.1	Alternating Player Levels	179
7.2.2	Terminal States and Utilities	181
7.2.3	Strategies in Games.....	181
7.2.4	Growth of the Game Tree and Game Complexity.....	181
7.2.5	Solving Game Trees Deterministically	182
7.2.6	AND–OR Representation of Game Trees.....	184
7.2.7	Implications for Adversarial Search	185
7.3	The Jug Problem	186
7.4	The Chess Problem.....	190
7.5	The Tiles Problem.....	193
7.5.1	The Sliding Tiles Problem (8-Puzzle)	194
7.5.2	The Combinatorial Tiles Problem ($2 \times n$ Tiling)	195
7.6	Minimax Algorithm.....	197
7.6.1	Game-Theoretic Foundations	197
7.6.2	Worst-Case Decision Principle	197
7.6.3	Game Tree Representation.....	198
7.6.4	Recursive Definition	198
7.6.5	Interpretation of the Root Value	198
7.6.6	Connections to Repeated Games.....	198
7.6.7	Computational Properties.....	199
7.6.8	Practical Considerations	199
7.7	Alpha–Beta Pruning	205
	Student Assignment	216

Chapter 8 Problem Reduction and AND–OR Search.....	219
8.1 Motivation for Problem Decomposition	219
8.2 Classical Problem Decomposition: Means-Ends Analysis	220
8.2.1 Historical Background	220
8.2.2 Basic Concept of Means-Ends Analysis.....	221
8.2.3 Representation of States, Goals, and Operators.....	221
8.2.4 Difference Reduction Principle.....	222
8.2.5 Algorithmic Procedure of Means-Ends Analysis	223
8.2.6 Advantages and Limitations of Means-Ends Analysis.....	226
8.2.7 Applications of Means-Ends Analysis.....	227
8.3 AND–OR Graphs	227
8.4 AND–OR Search	231
8.5 AO* Algorithm.....	231
8.5.1 Node Types and Cost Semantics.....	232
8.5.2 Cost Estimation Rules	232
8.5.3 Solution Graphs and Termination	233
8.6 Variants and Refinements of the AO* Algorithm	234
8.6.1 Relationship to Other Search Paradigms.....	234
8.6.2 AO* Search on an AND–OR Graph.....	235
8.7 Problem Reduction versus State-Space Search.....	237
8.8 Applications of Problem Reduction.....	238
Student Assignment	240
Chapter 9 Constraint Satisfaction Problems	243
9.1 Definition of Constraint Satisfaction Problems	243
9.1.1 Intuition Through Real-Life AI Examples.....	244
9.2 Variables, Domains, and Constraints	245
9.2.1 Variables.....	245
9.2.2 Domains.....	246
9.2.3 Constraints.....	246
9.3 Constraint Graph Representation.....	248
9.3.1 Basic Structure of the Constraint Graph.....	248
9.3.2 Impact of Graph Topology on Complexity	251
9.3.3 Tree-Structured Constraint Graphs	252
9.3.4 Role of Constraint Graphs in CSP Algorithms	254
9.3.5 Trivial versus Nontrivial Constraint Graphs	254
9.4 Backtracking Search	255
9.4.1 Search Perspective.....	256
9.4.2 Algorithmic Procedure	256
9.4.3 Incremental Consistency Checking	256
9.4.4 Computational Limitations.....	257
9.4.5 Foundation for Advanced Techniques.....	257

9.4.6	Map-Coloring Problem Solved Using Backtracking Search	257
9.4.7	The 4-Queens Problem Solved Using Backtracking Search	260
9.5	Forward Checking	262
9.5.1	Motivation and Intuition	262
9.5.2	Operational Principle	263
9.5.3	Early Detection of Dead Ends	263
9.5.4	Degree of Consistency Enforced.....	263
9.5.5	Interaction with Constraint Graphs	263
9.5.6	Computational Trade-Offs	263
9.5.7	Conceptual Significance	264
9.5.8	Map Coloring with Forward Checking.....	264
9.6	Arc Consistency.....	266
9.6.1	Formal Definition of Arc Consistency.....	266
9.6.2	Intuition and Conceptual Meaning	266
9.6.3	Relationship to Constraint Graphs	267
9.6.4	The Arc Consistency Algorithm 3	267
9.7	Constraint Propagation	270
9.8	Applications of Constraint Satisfaction Problems	272
	Student Assignment	273

PART II Knowledge Representation, Reasoning and Planning

Chapter 10	Knowledge Representation	279
10.1	Why Knowledge Representation is Needed	279
10.2	Types of Knowledge in Intelligent Systems	281
10.2.1	Declarative Knowledge	281
10.2.2	Procedural Knowledge	282
10.2.3	Heuristic Knowledge	282
10.2.4	Structural Knowledge	282
10.2.5	Interplay Among Knowledge Types	283
10.3	Knowledge Bases.....	283
10.3.1	Declarative Nature of Knowledge	283
10.3.2	Separation of Knowledge and Inference	284
10.3.3	Structure of a Logical Knowledge Base	285
10.3.4	Queries and Entailment.....	286
10.3.5	Consistency and Monotonicity.....	288
10.3.6	Role of Knowledge Bases in Intelligent Systems.....	290
10.4	Knowledge Cycle in Intelligent Systems	291
10.5	Representing Actions and Change	293
10.5.1	Actions as State Transformations.....	293
10.5.2	Reasoning about Sequences of Actions.....	295

10.5.3	The Frame Problem.....	296
10.5.4	Classical Approaches and Limitations.....	297
10.6	Classical Knowledge Representation Schemes	298
10.6.1	Ontological Commitments and Conceptualization.....	298
10.6.2	Rule-Based Knowledge Representation.....	299
10.6.3	Semantic Networks.....	301
10.6.4	Frames	302
10.6.5	Conceptual Dependency Formalism.....	305
	Student Assignment	309
Chapter 11	Logic and Automated Reasoning	312
11.1	Logic.....	312
11.1.1	Propositional Logic	312
11.1.2	Propositions.....	313
11.1.3	Propositional Symbols.....	314
11.1.4	Compound Propositions.....	315
11.1.5	Logical Connectives.....	316
11.1.6	Logical Entailment and Models.....	318
11.2	Normal Forms and Resolution	324
11.2.1	Conjunctive Normal Form	324
11.2.2	Conversion to Conjunctive Normal Form	325
11.2.3	Clause Form	326
11.2.4	Horn Clause	327
11.2.5	Resolution Rule	328
11.2.6	Refutation.....	329
11.3	First-Order Logic	330
11.3.1	Motivation for First-Order Logic.....	331
11.3.2	Basic Components of First-Order Logic.....	332
11.3.3	Syntax and Semantics of First-Order Logic	334
11.3.4	Quantified Statements	336
11.4	Inference in First-Order Logic.....	337
11.4.1	Forward Chaining.....	337
11.4.2	Backward Chaining.....	339
11.4.3	Resolution in First-Order Logic	340
11.4.4	Unification.....	342
11.4.5	Control Strategies and Search Space Management	344
	Student Assignment	345
Chapter 12	Expert Systems.....	348
12.1	Background of Expert Systems.....	349
12.2	Architecture of an Expert System	350
12.2.1	Knowledge Base.....	351
12.2.2	Inference Engine	351

12.2.3	Working Memory	351
12.2.4	User Interface	352
12.3	Representing Domain Knowledge in Expert Systems	352
12.4	Inference Mechanisms in Expert Systems	353
12.4.1	Data-Driven Reasoning in Expert Systems	353
12.4.2	Goal-Driven Reasoning in Expert Systems	354
12.4.3	Selecting an Appropriate Reasoning Strategy.....	354
12.4.4	Control Strategies Governing Rule Activation	355
12.5	Expert System Shells	356
12.6	Explanation Systems	358
12.6.1	Why Explanations	358
12.6.2	How Explanations.....	359
12.6.3	What-if Explanations	359
12.6.4	Explanation Generation and Reasoning Traces	360
12.6.5	Role of Explanation in Trust and Usability	360
12.7	Knowledge Acquisition	361
12.7.1	Roles of Domain Experts and Knowledge Engineers	362
12.7.2	Knowledge Elicitation and Encoding Techniques	363
12.7.3	The Knowledge Acquisition Bottleneck	363
12.7.4	Validation and Refinement of Expert Knowledge	364
12.8	Development Life Cycle of Expert Systems.....	365
12.8.1	Problem Selection and Feasibility Assessment	365
12.8.2	Knowledge Modeling and System Design	366
12.8.3	Implementation and Testing	367
12.8.4	Deployment, Maintenance, and Evolution	368
12.9	Evaluation of Expert Systems.....	368
12.9.1	Correctness and Consistency of Conclusions.....	369
12.9.2	Performance and Responsiveness	369
12.9.3	Quality of Explanations and User Interaction	369
12.9.4	Comparative Evaluation with Human Experts	369
	Student Assignment	370

PART III Decision Processes and Learning

Chapter 13	Learning in Artificial Intelligence	375
13.1	Learning versus Programming	376
13.1.1	Programming as Knowledge Encoding.....	376
13.1.2	Learning as Knowledge Modification	377
13.2	Classical Learning Mechanisms in Artificial Intelligence.....	379
13.2.1	Rote Learning.....	379
13.2.2	Learning by Taking Advice	379
13.2.3	Winston's Learning Program.....	380

13.2.4	Inductive Bias and Learning Assumptions	382
13.2.5	Incremental Learning versus Batch Learning	382
13.3	Foundations of Machine Learning	384
13.3.1	What is Machine Learning?	384
13.3.2	Learning Paradigms	385
13.3.3	Learning Pipeline	395
13.4	Learning from Examples and Experience	398
13.4.1	Examples as Training Data	398
13.4.2	Generalization from Experience	399
13.4.3	Fitting of Data	400
13.5	Bias–Variance Trade-off	403
13.5.1	Learning Agent Architecture	406
13.5.2	Integration with Reasoning and Search	407
13.5.3	Agents with Perception, Learning, and Reasoning	407
	Student Assignment	408
Chapter 14	Classical Machine Learning Techniques	412
14.1	Decision Trees	412
14.1.1	Structure of a Decision Tree	413
14.1.2	Learning Process	415
14.2	Market Basket Analysis	422
14.2.1	Transactional Representation of Data	423
14.2.2	Association Rules	424
14.2.3	Measures of Rule Strength	424
14.2.4	Learning Frequent Itemsets	425
14.3	Support Vector Machines	428
14.3.1	Linear Classification Setting	428
14.3.2	Maximum Margin Intuition	429
14.3.3	Hard-Margin and Soft-Margin Formulations	429
14.3.4	Decision Function and Prediction	431
14.4	k-Nearest Neighbors	436
14.5	Linear Regression	438
14.5.1	Linear Regression with Prediction Error	439
14.6	Introduction to Neural Learning	441
14.6.1	Biological Neurons	442
14.6.2	From Biological Neurons to Artificial Neurons	443
14.6.3	Perceptron	444
14.6.4	Forward Propagation	445
14.6.5	Multilayer Perceptron	448
14.6.6	Backpropagation	449
14.7	Comparative Summary of Classical Learning Paradigms	451
14.8	Comparative Overview of Learning Paradigms	452
	Student Assignment	452

Chapter 15 Reasoning Under Uncertainty	456
15.1 Probabilistic Learning	457
15.1.1 Probabilistic Interpretation of Knowledge	457
15.1.2 Conditional Probability	457
15.1.3 Bayes' Rule	459
15.2 Approximate Inference	461
15.2.1 Why Exact Inference Becomes Intractable	461
15.2.2 Core Idea of Approximation	462
15.2.3 Sampling-Based Approximate Inference	462
15.3 Dempster–Shafer Theory of Evidence	463
15.3.1 Frame of Discernment and Mass Assignment	463
15.3.2 Belief and Plausibility	463
15.3.3 Relationship to Bayesian Theory	464
15.4 Fuzzy Logic and Fuzzy Sets	464
15.4.1 Crisp Sets versus Fuzzy Sets	465
15.4.2 Standard Membership Functions	467
15.4.3 Basic Operations on Fuzzy Sets	470
15.4.4 Fuzzy Relations and Rules	473
15.4.5 Defuzzification	474
15.4.6 Step-by-Step Numerical Examples	478
Student Assignment	481
Chapter 16 Natural Language Processing	485
16.1 Language as Knowledge	486
16.2 Language as Action	487
16.3 Language as Interface	487
16.4 Classical versus Learning-Based Natural Language Processing	488
16.4.1 Rules, Grammars, and Logic	488
16.4.2 Statistical Natural Language Processing	488
16.4.3 Neural Natural Language Processing	489
16.5 Natural Language Processing Pipeline	490
16.5.1 Text Normalization	490
16.5.2 Lexical Analysis	491
16.5.3 Morphological Analysis	492
16.5.4 Syntactic Analysis (Parsing)	492
16.5.5 Semantic Analysis	492
16.5.6 Discourse Integration	493
16.5.7 Pragmatic Analysis	493
16.6 Core Natural Language Processing Tasks	493
16.6.1 Tokenization	494
16.6.2 Text Representation and Embedding Techniques	495
16.6.3 Text Classification	498

16.6.4	Information Extraction	499
16.6.5	Question Answering.....	500
16.6.6	Token and Sequence Classification.....	500
16.6.7	Machine Translation	501
16.6.8	Summarization	502
16.7	Natural Language Processing in Modern Artificial Intelligence Systems.....	503
16.7.1	From Pipeline to Foundation Models.....	504
16.7.2	Instruction Following and Generative Artificial Intelligence.....	504
16.7.3	Natural Language Processing as the Core of Modern Artificial Intelligence	504
16.7.4	Bridge to Large Language Models	505
	Student Assignment	506
Chapter 17	Modern Artificial Intelligence Systems and Applications	510
17.1	Language Models and Prompting.....	510
17.1.1	Prompt Engineering	510
17.1.2	Types of Prompts	513
17.1.3	How Prompt Engineering Works.....	514
17.1.4	Chain-of-Thought.....	516
17.2	Artificial Intelligence Agents in Practice	518
17.2.1	Architectural Overview.....	519
17.2.2	Memory: Temporal Continuity and Adaptation	519
17.2.3	Planning and Deliberation.....	520
17.2.4	Tool Use and External Augmentation	520
17.2.5	Reflection and Self-Critique.....	521
17.2.6	Application Domains.....	521
17.2.7	From Prediction to Autonomy	521
17.3	Some Applications of Artificial Intelligence.....	522
17.3.1	Agriculture	522
17.3.2	Business.....	523
17.3.3	Healthcare	524
17.3.4	Transportation	525
17.3.5	Scientific Research	526
17.3.6	Graph Analytics	528
17.3.7	Video Analytics	529
	Student Assignment	531
	<i>Index</i>	535
