<i>Preface</i>	v
1. Foundational Mathematics and Physics for Quantum Computing	1
1.1 Foundational Mathematics	1
1.2 Complex Numbers	2
1.3 Vector, Vector Products and Vector Spaces	4
1.3.1 Vector	4
1.3.2 Vector Products	5
1.3.3 Vector Spaces	6
1.4 Building a Vector Space	7
1.5 Tensors and Tensor Products	7
1.6 Groups and Fields	11
1.7 Subspaces	13
1.8 Span, Linear Independence, Bases and Dimensions	14
1.9 Linear Transformations and Operators	15
1.10 Orthonormal Bases	16
1.11 Eigenvectors and Eigenvalues	18
1.12 Determinant and its Properties	19
1.13 Change of Basis	21
1.14 Foundational Physics Concepts	22
1.15 Hilbert Space	23
1.16 Inner Products and Operators	25
1.17 Axiomatic Definition of Inner Product	26
1.18 Hermitian Operators	27
1.19 Kronecker Delta Function	28
1.20 Unitary Operators	28
2. Introduction to Quantum Computing	30
2.1 Problems with Classical Computations	30
2.2 Advantages of Quantum Computing	31
2.3 Characteristics of Quantum Computing	33
2.4 Types of Quantum Computing	35
2.5 Building Quantum Computers	38
2.6 Simulating Quantum System	40
2.7 Applications of Quantum Computing	42

2.8	Limitations of Quantum Computing	44
2.9	Internals of Quantum Computing	45
2.10	Quantum Mechanics	46
2.11	Quantum Computer	48
3.	Error Corrections in Quantum Computing	50
3.1	Quantum Error Corrections	50
3.1.1	The Shor Code	50
3.1.2	The Steane Code	51
3.1.3	Surface Code	51
3.2	Correcting Superpositions and Mixtures of Errors	53
3.3	Surface Codes and Lattice Surgery	55
3.4	Types of Quantum Independent Error Models	55
3.5	Assumption of Independent Error Models	56
3.6	Example of Error Correction in Independent Error Models	56
3.7	Computing on Encoded Stabilizer States	56
	<i>References</i>	59
	<i>Index</i>	75
