Preface to the Third Edition *v*

Preface to the Second Edition *vii*

1. VECTOR ANALYSIS	1–103
1.1 Introduction	1
1.2 Scalar or Dot Product	4
1.3 Vector or Cross Product	5
1.4 Examples of Scalar and Vector Products in Physics	6
1.5 Multiple Products	6
1.6 Vector Derivatives	13
1.7 Scalar and Vector Fields	20
1.8 The Gradient of Scalar Field	21
1.9 The Concept of Divergence and Gauss's Theorem	26
1.10 Green's Theorem in the Plane	29
1.11 The Curl of a Vector Field and Stoke's Theorem	36
1.12 Successive Applications of the operator ∇	49
1.13 The Classification of Vector Fields	59
1.14 Curvilinear Coordinates	61
1.15 Applications to Hydrodynamics	72
1.16 The Equation of Heat Flow in Solids	76
1.17 The Gravitational Potential	77
<i>Short Answer Questions</i>	87
<i>Problems</i>	90
<i>Multiple Choice Questions</i>	96
<i>Answers</i>	103

2. MATRICES	104–216
2.1 Introduction	104
2.2 Basic Concepts	104
2.3 Addition and Multiplication of Matrices	110
2.4 Special Matrices	114
2.5 Minors and Rank of Matrices	120
2.6 Elementary Transformations	122
2.7 Methods of Computing the Inverse of a General Nonsingular Matrix	125
2.8 Solution of Linear Equations	146
2.9 Vector Spaces	159
2.10 Linear Transformation	162
2.11 Unitary and Orthogonal Transformations	163

2.12 Eigen Values, Eigen Vectors, Characteristic Equation of Matrix	167
2.13. Diagonalization of Matrices	176
2.14. Functions of Matrix	191
<i>Short Answer Questions</i>	203
<i>Problems</i>	204
<i>Multiple Choice Questions</i>	209
<i>Answers</i>	216
3. TENSOR ANALYSIS	217–305
3.1 Introduction	217
3.2 Notations	217
3.3 The Rank and Number of Components of a Tensor	217
3.4 n -Dimensional Space	218
3.5 Transformation of Coordinates in Linear Spaces	218
3.6 Indicial and Summation Conventions	219
3.7 Dummy and Real Indices	219
3.8 Kronecker Delta	219
3.9 Scalars (Invariants), Contravariant and Covariant Vectors	220
3.10 Tensors of Higher Ranks	223
3.11 Algebraic Operations on Tensors	224
3.12 The Quotient Law	227
3.13 Extension of Rank of a Tensor	228
3.14 Symmetric and Antisymmetric Tensors	228
3.15 Invariant Tensors	232
3.16 Reciprocal or Conjugate Tensors	234
3.17 Relative and Absolute Tensors	234
3.18 Metric or Fundamental Tensor	235
3.19 Fundamental Tensors	235
3.20 Associated Tensors	238
3.21 Vector Analysis Using Tensor Notation	239
3.22 Christoffel's 3-Index Symbols	240
3.23 Transformation Laws for Christoffel Symbols	241
3.24 Geodesics	243
3.25 Covariant Differentiation	246
3.26 Covariant Differentiation of Tensors of Higher Rank	248
3.27 Covariant Derivatives of Fundamental Tensors $g_{\mu\nu}$, $g^{\mu\nu}$ and g^μ_ρ	249
3.28 Laws of Covariant Differentiation of Tensors	250
3.29 Covariant Derivative of an Invariant	251
3.30 Tensor Notation and Form of Gradient; Divergence, Laplacian and Curl	252
3.31 Divergence of a Tensor	253
3.32 The Intrinsic Derivatives of a Vector	254
3.33 Intrinsic and Covariant Derivatives of Higher Rank Tensors	255
3.34 Geodesic Coordinates	255
3.35 Riemann–Christoffel Tensor	256
3.36 Covariant Curvature Tensor	258
3.37 Independent Components of the Curvature Tensor $R_{\rho\mu\nu\sigma}$	260
3.38 Contraction of Riemann–Christoffel Tensor	260

3.39	Bianchi Identities	261
3.40	The Einstein's Tensor: Contraction of Bianchi Identities	262
3.41	Applications of Tensors in Mechanics	263
	<i>Short Answer Questions</i>	293
	<i>Problems</i>	294
	<i>Multiple Choice Questions</i>	299
	<i>Answers</i>	305
4.	FACTORIAL AND RELATED FUNCTIONS	306–346
4.1	Introduction	306
4.2	Factorial Function	306
4.3	Gamma Functions	306
4.4	Other Forms of Gamma Function	310
4.5	The Beta (β) Function	311
4.6	Other Forms of Beta function	312
4.7	Derivatives of Gamma Functions (Digamma and Polygamma Functions)	316
4.8	Stirling's Formula for Large n	319
4.9	Incomplete Beta and Gamma Functions	320
4.10	Exponential and Related Integrals	322
	<i>Short Answer Questions</i>	338
	<i>Problems</i>	338
	<i>Multiple Choice Questions</i>	342
	<i>Answers</i>	346
5.	DIRAC DELTA FUNCTION AND GREEN'S FUNCTIONS	347–368
5.1.	Dirac Delta Function	347
5.2.	Derivative of δ -Function	350
5.3.	Three Dimensional Delta-Function $\delta(r)$	350
5.4.	A Few Simple Illustrations of Delta Function	351
5.5.	Laplace and Fourier Transforms of Delta Function	352
5.6.	Green's Functions	358
5.7.	Alternative Solution of Green's Function Equation	360
5.8.	Green's Functions in Electrodynamics	361
	<i>Short Answer Questions</i>	364
	<i>Problems</i>	365
	<i>Multiple Choice Questions</i>	366
	<i>Answers</i>	368
6.	FUNCTIONS OF COMPLEX VARIABLES	369–492
6.1.	Introduction	369
6.2.	Some Definitions	369
6.3.	Derivative of $f(z)$ and Analyticity	372
6.4.	Complex Integration	386
6.5.	An Upper Bound for a Contour Integral	390
6.6.	Cauchy's Integral Theorem	391
6.7.	Simply Connected and Multiply Connected Regions	393

6.8. Consequences of Cauchy's Theorem	393
6.9. Cauchy's Integral Formulas	395
6.10. Poisson's Integral Formulas for a Circle	398
6.11. Infinite Series: Taylor's and Laurent's Series	402
6.12. Common Techniques for the Construction of Taylor and Laurent Series	408
6.13. Zeros and Singularities	410
6.14. The Calculus of Residue	417
6.15. Rectangular Contours	440
6.16. Bromwich Contour Integrals	450
6.17. Conformal Mapping (Transformation)	456
6.18. Physical Applications of Conformal Mapping	462
<i>Short Answer Questions</i>	477
<i>Problems</i>	479
<i>Multiple Choice Questions</i>	486
<i>Answers</i>	492
7. DIFFERENTIAL EQUATIONS AND POLYNOMIALS	493–622
7.1. Introduction	493
7.2. General Method of Solving Certain Differential Equations of Higher Order	494
7.3. Linear Equations with Variable Coefficients—Equations of the Second Order	501
7.4. Series Solutions of Linear Differential Equation of Second Order	509
7.5. The Legendre Equation	517
7.6. Associated Legendre Polynomials	535
7.7. Bessel's Differential Equation	543
7.8. Hypergeometric (Gauss) Differential Equation	564
7.9. Confluent Hypergeometric Functions	576
7.10. Hermite Differential Equation	585
7.11. Laguerre's Differential Equation	594
7.12. Associated Laguerre Differential Equation and Associated Laguerre Polynomials	601
<i>Short Answer Questions</i>	608
<i>Problems</i>	610
<i>Multiple Choice Questions</i>	616
<i>Answers</i>	622
8. INTEGRAL TRANSFORMS	623–670
8.1. Introduction	623
8.2. Laplace Transform and its Properties	624
8.3. Methods of Finding Laplace Transforms of Some Special Functions	629
8.4. The Inverse Laplace Transform	638
8.5. Convolution of Faltung Theorem	639
8.6. Heavyside Expansion Formula (Theorem)	641
8.7. Methods of Finding Inverse Laplace Transforms	641
8.8. Applications of Laplace Transforms	648
8.9. The Fourier Transform	655
8.10. Fourier Sine and Cosine Transform	655
8.11. Fourier Sine and Cosine Transform of Derivatives	656

8.12 The Convolution or Faltung Theorem for Fourier Transform	657
8.13 Some Applications of Fourier Transforms	657
<i>Short Answer Questions</i>	660
<i>Problems</i>	661
<i>Multiple Choice Questions</i>	665
<i>Answers</i>	670
9. PARTIAL DIFFERENTIAL EQUATIONS	671–719
9.1 Introduction	671
9.2 Partial Differential Equations in Physics	671
9.3 Laplace's Equation in Three Dimensions	672
9.4 Wave Equation in Three Dimensions	675
9.5 Examples: Solutions of Laplace's Equation	679
9.6 Examples: Solutions of Wave Equation	686
9.7 Solution of Heat Flow Equation	690
9.8 General Theorems	696
9.9 Green's Functions	697
9.10 Solution of Poisson's Equation Using Green's Functions	700
<i>Short Answer Questions</i>	710
<i>Problems</i>	711
<i>Multiple Choice Questions</i>	716
<i>Answers</i>	719
10. LINEAR VECTOR SPACES	720–743
10.1 Introduction	720
10.2 Vectors	721
10.3 Vector Spaces	722
10.4 Metrics, Norms and Inner Products	723
10.5 Linear Dependence and Dimension	730
10.6 Gram–Schmidt Orthonormalisation	739
<i>Problems</i>	742
11. GROUP THEORY	744–791
11.1 Introduction	744
11.2 Group	744
11.3 Rearrangement Lemma	748
11.4 Some Definitions	749
11.5 Homomorphism and Isomorphism	753
11.6 Representation of Groups	754
11.7 Reducible and Irreducible Representation	756
11.8 The Direct Product Representation	758
11.9 Orthogonality Theorem and Schur's Lemmas	760
11.10 Character of a Representation and Character Table	763
11.11 Decomposing a Reducible Representation into Irreducible Ones	767
11.12 Construction of Representation	769
11.13 Representation of Groups and Quantum Mechanics	771

Contents

Preface to the Third Edition *v*

Preface to the Second Edition *vii*

1. VECTOR ANALYSIS	1–103
1.1 Introduction	1
1.2 Scalar or Dot Product	4
1.3 Vector or Cross Product	5
1.4 Examples of Scalar and Vector Products in Physics	6
1.5 Multiple Products	6
1.6 Vector Derivatives	13
1.7 Scalar and Vector Fields	20
1.8 The Gradient of Scalar Field	21
1.9 The Concept of Divergence and Gauss's Theorem	26
1.10 Green's Theorem in the Plane	29
1.11 The Curl of a Vector Field and Stoke's Theorem	36
1.12 Successive Applications of the operator ∇	49
1.13 The Classification of Vector Fields	59
1.14 Curvilinear Coordinates	61
1.15 Applications to Hydrodynamics	72
1.16 The Equation of Heat Flow in Solids	76
1.17 The Gravitational Potential	77
<i>Short Answer Questions</i>	87
<i>Problems</i>	90
<i>Multiple Choice Questions</i>	96
<i>Answers</i>	103

2. MATRICES	104–216
2.1 Introduction	104
2.2 Basic Concepts	104
2.3 Addition and Multiplication of Matrices	110
2.4 Special Matrices	114
2.5 Minors and Rank of Matrices	120
2.6 Elementary Transformations	122
2.7 Methods of Computing the Inverse of a General Nonsingular Matrix	125
2.8 Solution of Linear Equations	146
2.9 Vector Spaces	159
2.10 Linear Transformation	162
2.11 Unitary and Orthogonal Transformations	163

2.12 Eigen Values, Eigen Vectors, Characteristic Equation of Matrix	167
2.13. Diagonalization of Matrices	176
2.14. Functions of Matrix	191
<i>Short Answer Questions</i>	203
<i>Problems</i>	204
<i>Multiple Choice Questions</i>	209
<i>Answers</i>	216
3. TENSOR ANALYSIS	217–305
3.1 Introduction	217
3.2 Notations	217
3.3 The Rank and Number of Components of a Tensor	217
3.4 n -Dimensional Space	218
3.5 Transformation of Coordinates in Linear Spaces	218
3.6 Indicial and Summation Conventions	219
3.7 Dummy and Real Indices	219
3.8 Kronecker Delta	219
3.9 Scalars (Invariants), Contravariant and Covariant Vectors	220
3.10 Tensors of Higher Ranks	223
3.11 Algebraic Operations on Tensors	224
3.12 The Quotient Law	227
3.13 Extension of Rank of a Tensor	228
3.14 Symmetric and Antisymmetric Tensors	228
3.15 Invariant Tensors	232
3.16 Reciprocal or Conjugate Tensors	234
3.17 Relative and Absolute Tensors	234
3.18 Metric or Fundamental Tensor	235
3.19 Fundamental Tensors	235
3.20 Associated Tensors	238
3.21 Vector Analysis Using Tensor Notation	239
3.22 Christoffel's 3-Index Symbols	240
3.23 Transformation Laws for Christoffel Symbols	241
3.24 Geodesics	243
3.25 Covariant Differentiation	246
3.26 Covariant Differentiation of Tensors of Higher Rank	248
3.27 Covariant Derivatives of Fundamental Tensors $g_{\mu\nu}$, $g^{\mu\nu}$ and g^μ_ρ	249
3.28 Laws of Covariant Differentiation of Tensors	250
3.29 Covariant Derivative of an Invariant	251
3.30 Tensor Notation and Form of Gradient; Divergence, Laplacian and Curl	252
3.31 Divergence of a Tensor	253
3.32 The Intrinsic Derivatives of a Vector	254
3.33 Intrinsic and Covariant Derivatives of Higher Rank Tensors	255
3.34 Geodesic Coordinates	255
3.35 Riemann–Christoffel Tensor	256
3.36 Covariant Curvature Tensor	258
3.37 Independent Components of the Curvature Tensor $R_{\rho\mu\nu\sigma}$	260
3.38 Contraction of Riemann–Christoffel Tensor	260

3.39	Bianchi Identities	261
3.40	The Einstein's Tensor: Contraction of Bianchi Identities	262
3.41	Applications of Tensors in Mechanics	263
	<i>Short Answer Questions</i>	293
	<i>Problems</i>	294
	<i>Multiple Choice Questions</i>	299
	<i>Answers</i>	305
4.	FACTORIAL AND RELATED FUNCTIONS	306–346
4.1	Introduction	306
4.2	Factorial Function	306
4.3	Gamma Functions	306
4.4	Other Forms of Gamma Function	310
4.5	The Beta (β) Function	311
4.6	Other Forms of Beta function	312
4.7	Derivatives of Gamma Functions (Digamma and Polygamma Functions)	316
4.8	Stirling's Formula for Large n	319
4.9	Incomplete Beta and Gamma Functions	320
4.10	Exponential and Related Integrals	322
	<i>Short Answer Questions</i>	338
	<i>Problems</i>	338
	<i>Multiple Choice Questions</i>	342
	<i>Answers</i>	346
5.	DIRAC DELTA FUNCTION AND GREEN'S FUNCTIONS	347–368
5.1.	Dirac Delta Function	347
5.2.	Derivative of δ -Function	350
5.3.	Three Dimensional Delta-Function $\delta(r)$	350
5.4.	A Few Simple Illustrations of Delta Function	351
5.5.	Laplace and Fourier Transforms of Delta Function	352
5.6.	Green's Functions	358
5.7.	Alternative Solution of Green's Function Equation	360
5.8.	Green's Functions in Electrodynamics	361
	<i>Short Answer Questions</i>	364
	<i>Problems</i>	365
	<i>Multiple Choice Questions</i>	366
	<i>Answers</i>	368
6.	FUNCTIONS OF COMPLEX VARIABLES	369–492
6.1.	Introduction	369
6.2.	Some Definitions	369
6.3.	Derivative of $f(z)$ and Analyticity	372
6.4.	Complex Integration	386
6.5.	An Upper Bound for a Contour Integral	390
6.6.	Cauchy's Integral Theorem	391
6.7.	Simply Connected and Multiply Connected Regions	393

6.8. Consequences of Cauchy's Theorem	393
6.9. Cauchy's Integral Formulas	395
6.10. Poisson's Integral Formulas for a Circle	398
6.11. Infinite Series: Taylor's and Laurent's Series	402
6.12. Common Techniques for the Construction of Taylor and Laurent Series	408
6.13. Zeros and Singularities	410
6.14. The Calculus of Residue	417
6.15. Rectangular Contours	440
6.16. Bromwich Contour Integrals	450
6.17. Conformal Mapping (Transformation)	456
6.18. Physical Applications of Conformal Mapping	462
<i>Short Answer Questions</i>	477
<i>Problems</i>	479
<i>Multiple Choice Questions</i>	486
<i>Answers</i>	492
7. DIFFERENTIAL EQUATIONS AND POLYNOMIALS	493–622
7.1. Introduction	493
7.2. General Method of Solving Certain Differential Equations of Higher Order	494
7.3. Linear Equations with Variable Coefficients—Equations of the Second Order	501
7.4. Series Solutions of Linear Differential Equation of Second Order	509
7.5. The Legendre Equation	517
7.6. Associated Legendre Polynomials	535
7.7. Bessel's Differential Equation	543
7.8. Hypergeometric (Gauss) Differential Equation	564
7.9. Confluent Hypergeometric Functions	576
7.10. Hermite Differential Equation	585
7.11. Laguerre's Differential Equation	594
7.12. Associated Laguerre Differential Equation and Associated Laguerre Polynomials	601
<i>Short Answer Questions</i>	608
<i>Problems</i>	610
<i>Multiple Choice Questions</i>	616
<i>Answers</i>	622
8. INTEGRAL TRANSFORMS	623–670
8.1. Introduction	623
8.2. Laplace Transform and its Properties	624
8.3. Methods of Finding Laplace Transforms of Some Special Functions	629
8.4. The Inverse Laplace Transform	638
8.5. Convolution of Faltung Theorem	639
8.6. Heavyside Expansion Formula (Theorem)	641
8.7. Methods of Finding Inverse Laplace Transforms	641
8.8. Applications of Laplace Transforms	648
8.9. The Fourier Transform	655
8.10. Fourier Sine and Cosine Transform	655
8.11. Fourier Sine and Cosine Transform of Derivatives	656

8.12 The Convolution or Faltung Theorem for Fourier Transform	657
8.13 Some Applications of Fourier Transforms	657
<i>Short Answer Questions</i>	660
<i>Problems</i>	661
<i>Multiple Choice Questions</i>	665
<i>Answers</i>	670
9. PARTIAL DIFFERENTIAL EQUATIONS	671–719
9.1 Introduction	671
9.2 Partial Differential Equations in Physics	671
9.3 Laplace's Equation in Three Dimensions	672
9.4 Wave Equation in Three Dimensions	675
9.5 Examples: Solutions of Laplace's Equation	679
9.6 Examples: Solutions of Wave Equation	686
9.7 Solution of Heat Flow Equation	690
9.8 General Theorems	696
9.9 Green's Functions	697
9.10 Solution of Poisson's Equation Using Green's Functions	700
<i>Short Answer Questions</i>	710
<i>Problems</i>	711
<i>Multiple Choice Questions</i>	716
<i>Answers</i>	719
10. LINEAR VECTOR SPACES	720–743
10.1 Introduction	720
10.2 Vectors	721
10.3 Vector Spaces	722
10.4 Metrics, Norms and Inner Products	723
10.5 Linear Dependence and Dimension	730
10.6 Gram–Schmidt Orthonormalisation	739
<i>Problems</i>	742
11. GROUP THEORY	744–791
11.1 Introduction	744
11.2 Group	744
11.3 Rearrangement Lemma	748
11.4 Some Definitions	749
11.5 Homomorphism and Isomorphism	753
11.6 Representation of Groups	754
11.7 Reducible and Irreducible Representation	756
11.8 The Direct Product Representation	758
11.9 Orthogonality Theorem and Schur's Lemmas	760
11.10 Character of a Representation and Character Table	763
11.11 Decomposing a Reducible Representation into Irreducible Ones	767
11.12 Construction of Representation	769
11.13 Representation of Groups and Quantum Mechanics	771

11.14 Lie Groups and Lie Algebras	772
11.15 Three Dimensional Rotation Group $SO(3)$	774
11.16 Special Unitary Groups $SU(2)$ and $SU(3)$	777
11.17 The Irreducible Representation of $SU(2)$	779
11.18 Representation of $SO(3)$ from Those of $SU(2)$	781
11.19 Generators of Unitary Groups	782
11.20 Group $SU(3)$	783
11.21 Some Applications of Group Theory in Physics	785
<i>Problems</i>	789
<i>Short Answer Questions</i>	791
12. NUMERICAL METHODS	792–832
12.1. Introduction	792
12.2. Picard's Method of Successive Approximations	792
12.3. Euler's Method	795
12.4. Modified Euler's Method	796
12.5. Taylor's Series Method	800
12.6. Milne's Predictor–Corrector Method	801
12.7. Runge–Kutta Method	805
<i>Miscellaneous Examples</i>	807
<i>Problems</i>	822
<i>Multiple Choice Questions</i>	825
<i>Solutions</i>	829
13. PROBABILITY AND STATISTICS	833–896
13.1. Basic Definitions	833
13.2. Law of Addition of Probabilities	840
13.3. Events Independent	842
13.4. Probability of Happening of at Least One of the Several Independent Events	842
13.5. Theorems of Total Probability of Compound Events	843
13.6. Mathematical Expression	845
13.7. Theoretical Probability Distributions	854
13.8. Poisson's Distribution	861
13.9. Normal Probability Distribution	866
<i>Miscellaneous Examples</i>	878
<i>Problems</i>	884
<i>Multiple Choice Questions</i>	890
<i>Answers</i>	896
<i>Appendix</i>	897–912
<i>Suggested Readings</i>	913
<i>Index</i>	915–919

11.14 Lie Groups and Lie Algebras	772
11.15 Three Dimensional Rotation Group $SO(3)$	774
11.16 Special Unitary Groups $SU(2)$ and $SU(3)$	777
11.17 The Irreducible Representation of $SU(2)$	779
11.18 Representation of $SO(3)$ from Those of $SU(2)$	781
11.19 Generators of Unitary Groups	782
11.20 Group $SU(3)$	783
11.21 Some Applications of Group Theory in Physics	785
<i>Problems</i>	789
<i>Short Answer Questions</i>	791
12. NUMERICAL METHODS	792–832
12.1. Introduction	792
12.2. Picard's Method of Successive Approximations	792
12.3. Euler's Method	795
12.4. Modified Euler's Method	796
12.5. Taylor's Series Method	800
12.6. Milne's Predictor–Corrector Method	801
12.7. Runge–Kutta Method	805
<i>Miscellaneous Examples</i>	807
<i>Problems</i>	822
<i>Multiple Choice Questions</i>	825
<i>Solutions</i>	829
13. PROBABILITY AND STATISTICS	833–896
13.1. Basic Definitions	833
13.2. Law of Addition of Probabilities	840
13.3. Events Independent	842
13.4. Probability of Happening of at Least One of the Several Independent Events	842
13.5. Theorems of Total Probability of Compound Events	843
13.6. Mathematical Expression	845
13.7. Theoretical Probability Distributions	854
13.8. Poisson's Distribution	861
13.9. Normal Probability Distribution	866
<i>Miscellaneous Examples</i>	878
<i>Problems</i>	884
<i>Multiple Choice Questions</i>	890
<i>Answers</i>	896
<i>Appendix</i>	897–912
<i>Suggested Readings</i>	913
