Contents

Preface *vii*

1. General Considerations **1–6**

1.1 Units and Dimensions *1*
Definitions of Unit Basic Quantities *2*
Consistency of Dimension and Unit *3*
1.2 Precision and Approximation *4*
1.3 Guidelines for Solving Numerical Problems *6*

2. Gaseous State—Ideal **7–58**

2.1 Gas Laws *7*
2.2 Distribution of Molecular Velocities *8*
Average Kinetic Parameters *8*
2.3 Wall Collision and Effusion *10*
2.4 Intermolecular Collision and Mean Free Path *10*
2.5 Equipartition Principle and Heat Capacity of Gases *12*
Auxiliary Problems *13*
Answers *18*
University Questions *46*
Key to University Questions *50*

3. Gaseous State—Real **59–90**

3.1 The van der Waals Equation *59*
Boyle Temperature *60*
Critical Constants *60*
Comparison between Real Gases *61*
3.2 The Law of Corresponding States *61*
3.3 Other Equations of State *62*
The Dieterici Equation *62*
General Equation of State *62*
3.4 Intermolecular Forces *62*
Auxiliary Problems *64*
Answers *68*
University Questions *83*
Key to University Questions *86*

4. First Law of Thermodynamics and Thermochemistry **91–131**

4.1 Relevant Technical Terms *91*
Heat and Work *92*
4.2 First Law of Thermodynamics *92*
4.3 Heat of Reaction *94*
Hess's Law *94*
Kirchhoff's Equation *94*

4.4 Standard Enthalpy of a Reaction *94*
4.5 Remarkable Features of ΔH for Common Thermochemical Processes *95*
4.6 Bond Energy and Bond Dissociation Energy *95*
Auxiliary Problems *96*
Answers *101*
University Questions *121*
Key to University Questions *125*

5. Second Law of Thermodynamics **132–210**

5.1 The Carnot Formula *132*
5.2 Entropy *133*
5.3 Free Energy *134*
Dependence of Free Energy on Temperature *134*
Dependence of Free Energy on Pressure *135*
Spontaneity of Different Types of Changes *136*
5.4 Exact Differential *136*
5.5 Maxwell Relations *137*
Calculation of ΔU *137*
Calculation of ΔS *138*
Calculation of $C_P - C_V$ *138*
5.6 Joule–Thomson Phenomenon *139*
5.7 Fundamental Equations for Open Systems *140*
5.8 Partial Molar Quantities *140*
5.9 Fugacity and Activity *141*
Auxiliary Problems *141*
Answers *150*
University Questions *184*
Key to University Questions *192*

6. Liquid State—Stationary **211–234**

6.1 Structure of a Liquid *211*
6.2 Vapour Pressure *211*
6.3 Surface Tension *212*
Surface Energy and Surface Free Energy *212*
Angle of Contact and Shape of Liquid Surface *213*
Cohesive Work, Adhesive Work and Spreading of a Liquid *213*
6.4 Pressure Difference Across a Curved Surface *214*
Capillary Action *214*
Vapour Pressure over a Curved Surface *215*
6.5 Temperature Dependence of Surface Tension *215*
Auxiliary Problems *216*
Answers *219*
University Questions *229*
Key to University Questions *232*

7. Liquid State—Flowing Situation **235–253**

7.1 Fluid Flow and Viscosity *235*
Newton's Law *235*
Poiseuille's Law *235*
7.2 Viscosity of Liquids *236*
7.3 Viscosity of Gases *237*

7.4 Effect of Impurity on Viscosity *237*
7.5 Stokes Law *237*
Auxiliary Problems *238*
Answers *241*
University Questions *248*
Key to University Questions *250*

8. Solid State—Crystallography **254–297**

8.1 Characteristics of Solid State *254*
8.2 Crystal Structure and Space Lattice *254*
8.3 Classification of Crystals *255*
8.4 Crystal Planes and Their Representation *256*
8.5 Internal Structure of Crystals from X-Ray Diffraction *257*
8.6 Intensity of Diffraction and Structure Determination *258*
8.7 Diffraction Pattern of Cubic System *259*
8.8 Density of a Crystal and Closest Packing *260*
Auxiliary Problems *262*
Answers *268*
University Questions *291*
Key to University Questions *294*

9. Phase Equilibrium and Phase Rule **298–340**

9.1 Phase Transition *298*
9.2 Clapeyron Equation: Effect of Pressure on Temperature of a Two-Phase Equilibrium *299*
9.3 Phase Rule *300*
Derivation of Phase Rule *301*
9.4 Phase Diagrams of Simple Systems *301*
9.4.1 One-Component System *301*
9.4.2 Two-Component Liquid–Vapour System *302*
9.4.3 Two-Component Solid–Liquid System *305*
9.4.4 Three-Component Liquid–Liquid System *306*
Auxiliary Problems *307*
Answers *312*
University Questions *328*
Key to University Questions *332*

10. Ideal Solutions—Colligative Properties **341–377**

10.1 Ideal Solutions *341*
10.2 Colligative Properties *341*
10.3 Lowering of Vapour Pressure of a Solvent by a Solute *342*
Raoult's Law *342*
Henry's Law *342*
Duhem–Margules Equation *343*
10.4 Elevation of Boiling Point *344*
10.5 Depression of Freezing Point *346*
Solubility *347*
10.6 Osmosis and Osmotic Pressure *347*
10.7 van't Hoff Factor *348*
10.8 Determination of Molecular Weight *348*
10.9 Nonideal Solutions *349*

10.10 Regular Solutions *349*
Auxiliary Problems *350*
Answers *354*
University Questions *366*
Key to University Questions *370*

11. Chemical Equilibrium **378–418**

11.1 Reversible Nature of Chemical Reactions *378*
11.2 Free Energy Change in Chemical Reactions *378*
11.3 Relation between Different Equilibrium Constants *381*
11.4 Variation of Equilibrium Constant with Temperature *381*
11.5 Variation of Equilibrium Constant with Pressure *382*
11.6 Le Chatelier Principle *382*
11.7 Evaluation of Shift of Equilibrium *382*
Relation between Equilibrium Constant and Advancement of Reaction *384*
Auxiliary Problems *384*
Answers *388*
University Questions *405*
Key to University Questions *409*

12. Ionic Equilibrium **419–467**

12.1 Activity in Case of Electrolytes *419*
12.2 Debye–Huckel Theory *420*
12.3 Solubility Product *421*
Variation of Solubility of an Electrolyte Due to Presence of Other Electrolyte *421*
12.4 pH Scale *422*
12.5 Acid and Base Dissociation Constants *423*
Calculation of pH *423*
12.6 Acid–Base Indicator *426*
12.7 Buffer solution *426*
Auxiliary Problems *427*
Answers *432*
University Questions *454*
Key to University Questions *457*

13. Electrochemical Equilibrium **468–514**

13.1 Electrochemical Potential *468*
13.2 Electrochemical Cell *468*
13.3 Derivation of Cell EMF from Cell Reaction *469*
13.4 Types of Electrodes *471*
Metal–Cation Electrode *471*
Nonmetal–Anion Electrode *471*
Metal-Insoluble Salt–Anion Electrode *471*
Oxidation–Reduction Electrode *472*
Glass Electrode *472*
13.5 Concentration Cell *473*
13.6 Application of EMF Measurement *474*
Auxiliary Problems *474*
Answers *480*
University Questions *501*
Key to University Questions *505*

14. Electrolytic Conductance 515–554

14.1 Conduction of Electricity *515*
14.2 Ohm's law and Conductance *515*
14.3 Different Types of Conductivities *516*
14.4 Conductivity and Ionic Mobility *516*
14.5 Variation of Conductivity with Dilution *517*
14.6 Dependence of Conductance on Nature of the Solvent *518*
14.7 Conductivity at High Field and High Frequency *519*
14.8 Transport Number *519*
14.9 Application of Conductance Measurement *520*
Auxiliary Problems *520*
Answers *525*
University Questions *542*
Key to University Questions *546*

15. Chemical Kinetics and Catalysis 555–645

15.1 Terms and Definitions *555*
Rate of Reaction *555*
Order of Reaction *555*
Molecularity *556*
Reaction Mechanism *556*
15.2 Effect of Equilibrium on Kinetic Parameters *558*
15.3 Characteristics of the Reactions of Different Order *558*
Zero Order reaction *558*
First Order Reaction *559*
Second Order Reaction *559*
15.4 Complex Reactions *560*
Opposing and Reversible Reactions *561*
Consecutive Reactions *561*
Parallel or Side Reactions *562*
Chain Reactions *563*
15.5 Effect of Temperature on Reaction Rate *565*
15.6 Effect of Catalyst on Reaction Rate *566*
Acid-Base Catalysis *566*
Enzyme Catalysis *568*
15.7 Theory of Reaction Rates *571*
15.8 Reactions in Solution *571*
15.9 Reactions involving Ions–Kinetic Salt Effect *572*
15.10 Unimolecular Reactions *572*
15.11 Termolecular Reactions *573*
Auxiliary Problems *573*
Answers *584*
University Questions *622*
Key to University Questions *630*

16. Adsorption and Surface Catalysis 646–666

16.1 Adsorption *646*
16.2 Gibbs Adsorption Isotherm *646*
16.3 Langmuir Adsorption Isotherm *647*
16.4 BET Isotherm *648*

16.5 Heterogeneous (Surface) Catalysis *648*
Surface Catalysed Unimolecular Reactions *648*
Surface Catalysed Bimolecular Reactions *649*
Auxiliary Problems *649*
Answers *652*
University Questions *661*
Key to University Questions *663*

17. Electric and Magnetic Properties of Molecules **667–692**

17.1 Dipole Moment and Polarization *667*
17.2 Clausius–Mossotti Equation *667*
17.3 Debye Equation *668*
17.4 Dipole Moment and Molecular Structure *669*
17.5 Magnetic Properties *669*
Auxiliary Problems *670*
Answers *674*
University Questions *687*
Key to University Questions *689*

18. Quantum Mechanics **693–771**

18.1 Black-Body Radiation *693*
18.2 Photoelectric Effect *693*
18.3 Compton Effect *694*
18.4 Line Spectra *695*
18.5 Wave-Particle Duality *695*
18.6 Uncertainty Principle *695*
18.7 Schrödinger Equation *696*
18.8 Interpretation of Wavefunction *697*
18.9 Operators and Observables *697*
18.10 Particle in a Box *699*
18.11 Simple Harmonic Oscillator *702*
18.12 Two-Particle Rotor *703*
18.13 Atomic Orbitals *705*
Radial Wavefunctions *707*
Angular Part of Wavefunction *707*
Auxiliary Problems *708*
Answers *716*
University Questions *749*
Key to University Questions *756*

19. Molecular Spectroscopy **772–815**

19.1 General Aspects of Spectra *772*
Frequency of Spectral Lines *772*
Spectral Selection Rules *772*
Intensity of Spectral Lines *773*
Width of Spectral Lines *773*
Spectral Regions *774*
19.2 Rotational Spectra *774*

19.3 Vibrational Spectra *775*
Effect of Anharmonicity *776*
Vibration–Rotation Spectra *777*
Vibrational Spectra of Polyatomic Molecules *778*
19.4 Raman Spectra *778*
19.5 Electronic Spectra *780*
Franck–Condon Principle *780*
Dissociation and Predissociation *781*
Deactivation of Electronically Excited Species *781*
Importance of Electronic Spectra *782*
Auxiliary Problems *783*
Answers *788*
University Questions *806*
Key to University Questions *810*

20. Photochemistry **816–842**

20.1 Absorption of Light *816*
20.2 Characteristics of Photochemical Reactions *817*
20.3 Laws of Photochemistry *817*
Grotthuss–Draper Law *817*
Stark–Einstein Law *817*
20.4 Photostationary State *818*
20.5 Photosensitisation *818*
Auxiliary Problems *819*
Answers *823*
University Questions *834*
Key to University Questions *837*

21. Statistical Thermodynamics and Third Law **843–900**

21.1 Microstate and Thermodynamic Probability *843*
21.2 Entropy and Probability *843*
21.3 Boltzmann Distribution Formula *846*
Alternative Derivation of Boltzmann Equation *847*
Barometric Distribution Formula *848*
21.4 Partition Function for a System of Independent Molecules *849*
Partition Function for a System of Interacting Molecules *849*
Thermodynamic Properties in Terms of Partition Function *851*
Translational Partition Function for an Ideal Gas *852*
Rotational Partition Function *853*
Vibrational Partition Function *853*
Electronic Partition Function *854*
Partition Function and Equilibrium Constant *854*
21.5 Heat Capacity of Gases *855*
Heat Capacity of Solids *855*
21.6 Third Law of Thermodynamics *856*
Third-Law Entropies *857*
Auxiliary Problems *858*
Answers *863*
University Questions *890*
Key to University Questions *893*
