

Contents

<i>Preface</i>	iii
<i>List of Plates</i>	xiv
<i>I. Background</i>	1–15
Land	1
Land problems	1
Water stress	1
Physiography	3
Soil erosion problems	3
Wastelands or degraded lands	4
Floods	6
Present land use	7
Present Production	8
Population	9
Future projections	11
Land-use planning	14
<i>II. Features of Indian Agriculture and Forestry</i>	16–40
Agriculture	16
Production system	17
Soil characteristics	17
Cropping system	18
Soil erosion	20
Dependence on rainfed agriculture	21
Small landholdings	21
Declining soil fertility and use of manures & fertilisers	22
Natural calamities	22
Role of animals and mechanisation	24
Agricultural labour	26
Forest	26
Classification of forests	27
Forestry	28
Extent of Forests in India	30

Actual forest cover	30
Role of Forests	32
Productive functions	32
Protective and ameliorative functions	38
Recreational and educational functions	39
Developmental functions	39
<i>III. Agroforestry—Definition, Scope and Advantages</i>	41–59
Historical	41
Definition	42
Advantages	46
Maximise production	46
Supplement food and fodder	47
Meet diverse needs of the people	50
Improve soil	51
Utilise wastelands and degraded lands	53
Provide Employment opportunities	54
Increase farm income	54
Minimise adverse effect of climatic factors	56
Aid industrial growth	56
Improve environment	57
<i>IV. Classification of Agroforestry Systems</i>	60–72
Introduction	60
Classification of agroforestry system	61
Structural classification	61
Agrisilviculture	61
Silvipasture system	62
Agrisilvipasture system	62
Multipurpose forest tree production system	62
Functional classification	68
Productive agroforestry systems	68
Protective agroforestry systems	68
Multipurpose agroforestry systems	68
Physiognomic classification	69
Floristic classification	69
Ecological classification	69
Socioeconomic classification	70
Historical classification	72
<i>V. Shifting Cultivation</i>	73–88
Area under shifting cultivation	74
Shifting cultivation in states	77

Andhra Pradesh	77
Arunachal Pradesh	78
Assam	78
Bihar	79
Kerala	79
Madhya Pradesh	79
Manipur	80
Meghalaya	80
Mizoram	80
Nagaland	81
Orissa	81
Tripura	82
Features of shifting cultivation	82
Technique	84
Effects	85
Control measures	86
<i>VI. Silviculture Systems</i>	89-103
Taungya system	89
Procedure	90
Progress in States	90
Andhra Pradesh	90
Kerala	91
Karnataka	91
Assam	91
Maharashtra	91
Tamil Nadu	91
Uttar Pradesh	92
West Bengal	92
Cultivation of crops and Plantations	92
Agreement	95
Crop yields	95
Merits and demerits	96
Cultivation in established plantations	96
Cultivation of commercial crops in forests	97
Sericulture, lac-culture, apiculture and pisciculture in forests	98
Sericulture	98
Lac-culture	99
Apiculture	100
Silvipisciculture	100
Wood lots	101

<i>VII. Agrisilviculture Systems</i>	104–124
Multipurpose trees on farm lands	104
Arid areas	105
Alluvial plains	107
Madhya Pradesh	111
Gujarat	112
Maharashtra	113
Orissa	113
Southern plateau region	113
Coastal areas	115
Himalayan region	116
Homestead plantations and home gardens	117
Trees with plantation crops	121
Multipurpose trees with horticultural crops	122
Alley cropping or Hedgerow cultivation	123
<i>VIII. Pastural Silviculture and Silvipasture Systems</i>	125–150
Livestock and fodder needs	125
Pastural-silviculture	126
Area	126
Major types of grasslands	127
Conditions of grasslands	127
Improvement of grasslands	130
Controlled grazing	130
Soil and water conservation	131
Protection	131
Introduction of improved fodder grasses and legumes	132
Use of manures and fertilisers	133
Weed control	133
Trees in grasslands	134
Important pastural-silvicultural practices in India	138
Silvipasture system	142
Systems of forest grazing	145
Lopping	147
Effects of grazing in forests	147
<i>IX. Windbreaks and Shelterbelts</i>	151–171
Wind conditions in India	151
Wind and Vegetation	152
Functions of windbreaks and shelterbelts	154
Control the ravages of wind	154
Improve environmental conditions	157
Increase yields of agricultural and pasture lands	160

Control wind erosion and shifting sand dunes	162
Counter salt-laden winds along the coast	164
Provide shelter to houses, gardens, roads, and other constructions	164
Supplement timber and firewood	165
Enhance aesthetic value of an area	165
Designing windbreaks and shelterbelts	166
Orientation	166
Interval	166
Continuity	167
Height	167
Width and density	167
Form of species and cross-sectional area	168
Selection of species	168
Types of windbreaks	168
Windbreaks and shelterbelts for coastal regions	170
<i>X. Social Forestry</i>	172-195
Historical genesis of the concept	172
Progress of social forestry	176
People's participation in social forestry programmes	185
Constraints in obtaining people's participation	186
Criticism of social forestry programmes	192
<i>XI. Development of Wastelands</i>	196-214
Wastelands	196
Technology for development of wastelands	197
Hot desert and shifting sand dunes	197
Saline/alkali areas	200
Ravine lands	203
Cold desert	205
Laterite and lateritic soils	206
Coastal sands	207
Dry and rocky areas	208
Wet lands	209
Denuded and eroded hill slopes	210
Land slips and scree	211
Shallow black cotton soils	212
Mined areas	213
<i>XII. Interaction in Crops</i>	215-230
Effects of trees on agricultural crops	215
Competition	215

Light competition	216
Underground competition	220
Change in microclimate	224
Nutrient cycling	225
Effects of agricultural crops on trees	227
Competition	227
Effect of cultivation practices	227
Effects of animal on vegetation	228
Effects of trees on animals	229
Other effects	230
<i>XIII. Choice of Species</i>	231-251
Site factors	231
Climate and Selection of species	232
Effect on annual crops	234
Root characteristics	236
Crown characteristics	237
Bole characteristics	238
Phenological characters	239
Nutrition and water requirement	240
Growth characteristics	242
Shelter to insect pests and diseases	243
Purpose of plantation	243
Social needs	243
Industrial needs	244
Environmental protection	244
Land use needs	245
Agroforestry system	245
Marketability of produce	246
Effect on site	247
Nitrogen-fixing trees	247
Ease of establishment	250
Resistance of insect pests and diseases	250
<i>XIV. Regeneration of Tree Crop</i>	252-277
Natural regeneration	252
Natural regeneration by seed	252
Natural regeneration by vegetative parts	253
Artificial regeneration	255
Seed collection	255
Species and provenance	255
Seed quantity	256
Germination per cent	256

Period of seed collection	257
Selection of trees	258
Methods of collection	258
Seed processing	259
Seed storage	259
Factors affecting longevity of seeds	260
Pretreatment of seeds	260
Nursery operations	261
Seed bed	261
Soil working	262
Inoculation with mycorrhiza	263
Method of sowing	263
Quantity of seed	263
Irrigation	264
Protection of seeds and seedlings	264
Weeding and soil working	265
Transplanting	265
Use of containers	265
Stump preparation	266
Root pruning	266
Vegetative propagation	267
Small stem and branch cuttings	267
Root suckers	267
Root and rhizome cuttings	268
Layering	268
Grafting and budding	268
Plantation	268
Site preparation	268
Sowing and planting	269
Direct sowing	269
Planting out	270
Methods of planting	272
Watering	273
Use of fertilisers	274
Spacing	274
Maintenance	276
<i>XV. Growth of Trees and Crops</i>	278–292
Silviculture	278
Forest Crop	278
Forms of crown	279
Branching	281
Foliage	281

Stem	282
Taper	282
Forking	283
Clean bole	283
Buttressing	283
Fluting	283
Root	284
Growth regions	285
Phenology and growth	285
Growth rings	286
Heartwood	287
Growth of trees and crops	288
Height growth	289
Growth in diameter	289
Site and diameter growth	290
Crop density and diameter growth	290
Age of forest crop	291
Advantages of even-aged crop	291
Composition of crop	291
<i>XVI. Management of Trees in Agroforestry Systems</i>	293-307
Management	293
Management of Agroforestry	294
Shifting cultivation	294
Taungya	295
Agrisilviculture systems	297
Silvipasture and pastoral silviculture	298
Silvicultural and Management operations	298
Ground operations	298
Tending operations	299
Silviculture systems	303
Harvesting and utilisation	307
<i>XVII. Economics of Agroforestry Systems</i>	308-320
Affective factors	308
Land-man ratio	308
Shortage of wood and steep price rise	309
Environmental awareness	310
Wood consumption pattern	310
Policies	311
Marketing	312
Time span	313
Risks	313

Valuation of outputs	314
Economics of individual systems	314
Shifting cultivation	314
Taungya system	315
Agrisilviculture system	315
Trees on farm land	315
Trees with plantation crops	318
Home gardens	318
Alley cropping	319
Live fence	319
Silvipasture and pastoral silviculture	319
<i>References</i>	321–335
<i>Appendix</i>	337–355
<i>Abbreviations Used</i>	357
<i>Index</i>	359
