<i>Preface</i>	...	...	v
----------------	-----	-----	---

Chapter 1

BASIC DEFINITIONS AND PROBABILITY CONCEPTS	...	...	1 - 14
---	-----	-----	--------

Introduction	1
Terminology	1
Calculation of standard deviation and variance	4
Concept of probability	6
Probability distributions	7
Binomial distribution	7
The normal distribution	9
Frequency distribution curve	10
Standard normal curve	11
Conversion of normal curves to standard normal curve	11
Central limit theorem	12
The Poisson distribution	13
The <i>t</i> distribution ('Student')	13

Chapter 2

ESTIMATION AND HYPOTHESIS TESTING	...	...	15 - 37
--	-----	-----	---------

Introduction	15
Concept of estimation	15
Confidence interval	16
Hypothesis testing	18
Null hypothesis	18
One-tailed test and two-tailed test	19
Paired and unpaired tests	21
Z value and <i>t</i> value	22
Paired <i>t</i> test	27
Chi-square test	29
Analysis of variance (ANOVA)	31
One-way ANOVA	31
Two way ANOVA	35

Chapter 3

LINEAR REGRESSION AND CORRELATION	...	...	38 - 56
--	-----	-----	---------

Concept of regression analysis	38
Application of linear regression in pharmacy	38
Rationale of linear regression analysis	39
Calculation of best-fit line	40
Test of slope and intercept	44
Calculation of stability using linear regression approach	46

Correlation	49
Correlation Vs regression	51
Test of zero correlation	52
Multiple linear regression analysis	52
Utility of multiple regression analysis in pharmacy	53
Concept of developing predictive equation	54

Chapter 4

FACTORIAL DESIGN	...	...	57 - 64
What is factorial design?	57		
Advantages of factorial experiment	58		
Symbols used for the experiments	58		
Some common terms used in factorial experiments	59		
Guidelines for designing	60		
A worked example of 2 ³ factorial experiment	61		

Chapter 5

OPTIMIZATION TECHNIQUES	...	...	65 - 86
Introduction	65		
Some important definitions	66		
Optimization using factorial design	67		
Simplex lattice	77		
Sequential optimization	81		

Chapter 6

QUANTITATIVE STRUCTURE–ACTIVITY RELATIONSHIP	...	...	87 - 102
Introduction	87		
Basic concepts	88		
Evolution of QSAR	91		
Hammett equation	91		
Hansch analysis	91		
Free Wilson or de novo method	93		
Some multivariate methods	94		
Cluster analysis and pattern recognition techniques	94		
Principal component analysis	95		
Partial least square analysis	96		
Canonical correlation analysis	97		
Three-dimensional QSAR	97		
Non-linear approach	100		
k-NN	100		
GFA	101		
Validation	101		

Chapter 7

PHARMACOPHORE-BASED DRUG DESIGNING	...	...	103 - 107
Introduction	103		
Methods to identify pharmacophore	104		
Direct method	104		

Indirect method	104
Applications of pharmacophore	105
Pharmacophore searching	105
De Novo designing of ligand	105
Lead optimization	106
In 3-D QSAR	106

Chapter 8

MOLECULAR DOCKING	...	...	108 - 112
Introduction	108		
Approaches to molecular docking	109		
Geometric matching	109		
Simulation process	110		
Mechanics of docking	110		
Search algorithm	110		
Scoring function	111		
Applications	111		

Chapter 9

UV SPECTROPHOTOMETRY	...	...	113 - 135
Introduction	113		
Beer–Lambert’s law	114		
Some important terms and concepts	116		
Spectrophotometers	118		
Factors affecting spectrophotometric measurements	121		
Important applications of UV spectrophotometry	122		
Structure analysis	122		
Principles involved in the calculation of $\lambda_{\max}$	123		
Woodward–Fieser rules	123		
Quantitative determination by UV spectroscopy	127		
Determination of concentration from a given absorptivity value	128		
Simultaneous estimation of two or more analytes	129		
Estimation of compound with contamination (derivative spectra)	132		

Chapter 10

HIGH PERFORMANCE LIQUID CHROMATOGRAPHY	...	...	136 - 159
Introduction	136		
Basic concepts	137		
Mechanism of separation within the column	137		
Different modes of HPLC	140		
Normal phase chromatography	140		
Reversed phase chromatography (RPC)	141		
Ion exchange chromatography	142		
Size exclusion chromatography	142		
Common terms used in HPLC	143		
Calculation of plate number and column efficiency	146		
HPLC system	147		
Different parts of HPLC system	148		

Pumps	148
Injectors	149
Column	150
Detectors	152
Factors affecting separation	155
Mobile phase	155
Solvent strength and selectivity	156
Buffer	157
Band broadening	158
Safety factors of HPLC	159

Chapter 11

NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY	...	...	160 - 175
Theory of NMR	160		
Chemical shift, shielding and deshielding	162		
Instrumentation	164		
Continuous-Wave	164		
Pulse Fourier Transform	165		
Interpretation of ¹ H NMR spectra	167		
Magnetic anisotropy	169		
Spin-spin splitting/(<i>n</i> + 1) rule	170		
Coupling constant	172		
¹ H NMR of some compounds	173		

Chapter 12

COMBINATORIAL CHEMISTRY AND HIGH THROUGHPUT SCREENING	...	...	176 - 182
Introduction	176		
History	176		
Principle and Methodology	177		
Approaches to combinatorial Chemistry	178		
Managing combinatorial chemistry libraries	180		
High throughput screening	180		

Chapter 13

STATISTICAL ANALYSIS OF BIOEQUIVALENCE STUDY AND CLINICAL TRIALS	...	...	183 - 197
Some important terms	183		
Designs used in clinical trial	184		
Parallel design	184		
Crossover designs and bioavailability/bioequivalence studies	185		
Factors affecting outcome of a bioavailability/bioequivalence study	187		
Nonparametric statistics	193		
Sign Test	193		
Wilcoxon's Signed Rank Test	195		
Appendices	...	...	199 - 206
Index	...	...	207 - 214
