Preface to the Second Edition

vii

Preface to the First Edition

viii

Section 1: Equipment in Anaesthesia

1. Medical Gases and Equipment in Anaesthesia

3

- | | | | |
|-------------------------|----|------------------------------------|----|
| Gas supply | 3 | Vaporizers | 12 |
| Gas cylinders | 3 | Factors affecting vaporizer output | 12 |
| Filling ratio | 4 | Back bar | 15 |
| Cylinder testing | 4 | Mapleson classification | 20 |
| Cylinder valve | 5 | Closed systems | 22 |
| Central pipeline | 7 | | |
| Oxygen concentrator | 8 | | |
| Flowmeters (rotameters) | 11 | | |

2. Accessories of Central Pipelines

25

- | | | | |
|------------------------------|----|-------------------------------|----|
| Diameter index safety system | 25 | Ceiling mounted hoser | 26 |
| Quick connector | 25 | Gas-specific connection point | |
| Structure | 26 | (socket assembly) | 26 |
| Wall outlet | 26 | | |

3. Equipment for Airway Care

27

- | | | | |
|--|----|--|----|
| Endotracheal tubes (ETT) | 27 | Endobronchial tubes | 35 |
| Various markings on rusch cuffed ETT | 28 | Facemask | 36 |
| Portex transparent oronasal | | Airway used for artificial ventilation | 38 |
| disposable cuffed ETT | 28 | Magill's forceps | 39 |
| Murphy's endotracheal tube | 28 | Manual resuscitating bags | 39 |
| Flexo metallic armored latex ETT | 28 | Yaunker's mask | 40 |
| Cole's paediatric ETT | 29 | Bellamy-Gardner's bottle | 41 |
| Croup extra-long paediatric ETT | 29 | Other types of open drop mask | 41 |
| RAE—Dr Ring, Adair, Elwyn, USA | 29 | Boyle's trilene vaporizer | 42 |
| Shiley's oro-nasal cuffed ETT (USA) | 30 | Boyle ether vaporizer | 42 |
| Endotracheal tubes for jet ventilation | 30 | Other types of ether vaporizers | 43 |
| Carden's injectoflex | 30 | Goldman halothane vaporizer | 43 |
| Other endotracheal tubes | 30 | EMO vaporizer | 44 |
| Laryngeal mask airway | 31 | Reservoir bag | 45 |
| Fastrach—intubating laryngeal mask | 32 | Corrugated breathing tubes | 46 |
| LMA supreme | 33 | Bain circuit | 47 |
| I-GEL | 33 | Jackson-Rees paediatric circuit | 48 |
| Baska mask | 33 | Ayre's T piece | 48 |
| 3gLM | 35 | Modifications of Ayer's T piece | 49 |
| Fibreoptic laryngoscope | 35 | Gorth needle | 49 |
| Combitube | 35 | Mitchell needle | 50 |

Tracheostomy tubes	50	Tongue forceps	54
Infusion set	51	Laryngeal spray	54
Respirometer	51	Endotracheal connections	54
Humidifiers	52	Magill connection	54
Condenser vaporizer	53	Rowbotham connection	54
Oxygen therapy equipment	53	Cobb and Magill suction union	55
Anaesthesia ventilator	53	Noseworthy connection	55
Doyen's gag	54	Catheter mount	55
Mouth prop	54	Stylet	55
Airway prop	54	Endotracheal tube adaptor	55

4. Additional Airway Equipment and Laryngoscopes

57

Cuffed oropharyngeal airway (COPA)	57	Indications of cricothyrotomy	70
Types of laryngoscope blades	58	Contraindications of cricothyrotomy	70
Videolaryngoscopes	64	Types of cricothyrotomy	70
Classification	65	Kit based cricothyrotomy	70
Limitations and difficulties	68	Steps for cricothyrotomy	71
Flexible fibre-optic bronchoscopy	68	Tracheostomy (PCDT)	72
Components of FOB	69	Indications of PCDT	72
Models available	69	Contraindications of PCDT	72
Techniques of FOB	69	Techniques for PCDT	72
Care of FOB	69	Steps of PCDT with ultraperc™ set	72
Steps of usage	69	Confirmation of tracheostomy tube placement	72
New flexible FOB	69	Post cricothyrotomy and PCDT care	72
Cricothyrotomy and percutaneous dilatational tracheostomy	70	Suctioning	74
		Tube change	74

5. Physics in Anaesthesia

75

Units of measurement	75	Heat	76
Properties of matter	75	Light and the electromagnets	77
Newton's law of motion	76	Electricity	82

6. Oxygen Therapy

89

Oxygen concentrators	89	Operation	90
Introduction	89	Sieve bed: one concentrating cycle	90
Method of operation	89	Sieve bed: two concentrating cycle	90
Concentrator design, inlet filters and silencer	90	Hyperbaric system	91

7. Neuromuscular Junction Monitoring

97

Peripheral nerve stimulator	97	Clinical consideration	98
Principle	97	Standards for basic anaesthesia monitoring	100
Indication	97	Electromyography	100
Contraindication	98		
Technique and complications	98		

8. Mass Spectrometry

102

Introduction	102	Shared system versus stand alone	104
Two basic types	102	Med graphics prevent pneumotach plethysmo graph	104
Components	102		

9. Airway Pressure Monitoring 106

- Introduction 106
- Sustained elevated pressure* 107
- High pressure* 107
- Subambient pressure* 108
- Other pressures* 108

10. Temperature Monitoring 109

- Indications 109
- Technology 109
 - Thermistor* 109
 - Thermocouple* 109
 - Platinum wire* 110
 - Liquid crystal* 110
 - Infrared* 110
- Tympanic membrane temperature probe
 - by thermistor or thermocouple 111
- Hazards of thermometry 112
- Fluid warmer 112

11. Alarm Devices 114

- Hypoxic guard system 115
- Ohmeda link 25* 115

12. Operation Theatre: Electrical Safety 117

- Electrical safety in OT* 117
- Electrical ground (earthing)* 117
- Capacitative coupling* 118
- Electric shock* 118
- Macro-shock* 118
- Micro-shock* 118
- Electrosurgery* 118
- Environmental safety in OT 119
 - Waste gases* 119
 - Laser* 120
 - Infection* 120
 - Allergy to rubber products* 121
 - Stress* 121
 - Sign of stress* 121
 - Avoidable stress* 121
 - Operation theatre fire* 121
 - Fire safety education drill* 122

13. Patient Monitors 123

- Cardiac monitors 123
 - Arterial blood pressure* 123
 - Noninvasive arterial blood pressure monitoring* 123
 - Invasive arterial blood pressure monitoring* 126
- ECG 129
 - Principles of the ECG* 130
 - Graphical recording* 130
 - Lead positions* 131
- Cardiac arrhythmias 132
 - Classification of arrhythmias* 133
- Narrow complex arrhythmias 133
- Broad complex arrhythmias 137
- Disturbances of conduction 139
 - First degree block* 139
 - Second degree block—Mobitz Type I (Wenkebach)* 139
 - Second degree block—Mobitz Type II* 139
 - Second degree block—2:1 type* 139
 - Complete heart block* 140
 - Bundle branch block* 140
- Preoperative prophylactic
 - pacemaker insertion 141
- Detection of myocardial ischaemia* 141
- ECG appearance of abnormal potassium concentrations* 142
- Central venous catheterization* 142
- Pulmonary artery catheterization (PAC)* 144
- Cardiac output* 147
- Techniques and complications* 147
- Respiratory system monitors 149
 - Precordial and oesophageal stethoscope* 149
 - Pulse oxymeter* 149
 - End tidal CO₂ analysis* 150
 - Transcutaneous oxygen and carbon dioxide monitors* 152

Neurological system monitors 153
Electroencephalography 153
Bispectral analysis 153

Evoked potential 153
 Other monitoring 154
Urinary output 154

14. Cardiorespiratory Equipment

155

Pacemaker 155
Applications 155
Transcutaneous pacing 155
Transvenous pacing 156
Permanent pacing 156
 Basic pacemaker function 156
Biventricular pacing (BVP) 157
Advancements in pacemaker function 157
 Pacemaker patient considerations 158
Pacemaker insertion 158
Pacemaker patient identification card 158
Living with a pacemaker 158

Lifestyle considerations 158
Defibrillator 159
Cardiac defibrillator – BPL 159
Holter monitoring (ambulatory ECG) 160
Oxycap 4700 (Ohmeda) 160
Dry spirometer (Vicat test 300) 161
 Heart-lung machine 162
A prototype heart-lung machines 162
Potential risks of heart-lung machines 164
Echocardiogram 165
Before preparation Echo 166

15. Neurological Monitoring

167

Intracranial pressure monitoring 167
Physiology 167
Methods 167
 Clinical application of ICP monitoring 168

Cerebral blood flow 169
 Transcranial Doppler sonography 169
 Laser Doppler flowmetry 170
 Xenon 133 clearance technique 170

16. Instrument in Spinal Anaesthesia

172

Epidural needles and cannula 172
Catheters 173
 Protocol for epidural block 173
Preparation 173
Spinal lumbar puncture needles 174
Technique of lumbar puncture (LP) 176

Midline approach 176
Taylor's technique 176
 Stout's principle for spread of solutions 177
 Spinal opioid drugs and infusion 177
 Spinal endoscopy 177
Introduction 177
Mechanism of action 178

17. Equipment used in Anaesthesia During Various Procedures

179

Measurement of CVP 179
 Saline manometer 179
 Transducer 179
Interpretation of CVP 179
False high CPV 179
False low CPV 179
 Urethral catheterization 179
Types 179
Infiltration of local anaesthesia 179
 Cricoid pressure 179
 Inflation of reservoir bag 179
 Emergency tension pneumothorax 180
 Oxygen therapy 180
Specification 181
 Anaesthesia apparatus check out
 recommendation 181
Guidelines 181

Scavenging systems 181
Scavenging interface 183
Open interface 183
Closed interface 183
 Tubing for gas disposal 183
Gas disposal assembly 184
 Negative pressure leak test 184
Advantage 184
 Relative analgesia machine for
 inhalational sedation 184
 High frequency ventilation 184
 Equipment used in operation
 theatre 185
Electrosurgery 185
Unipolar electrosurgery 186
Bipolar 186

- X-rays* 186
- Mobile intensive care trolley* 187
- Lasers* 188
 - Hazards of laser* 188
 - Suction machine* 189
 - Portable suction units* 190
- Suction catheters* 191
 - Shaft* 191
 - Patient end* 192
 - Machine end* 192
- Hazards associated with suctioning* 192

18. Automatic Ventilators and Critical Care Ventilators 193

- Prototype ventilators* 193
 - Input power* 193
 - Drive mechanism* 193
 - Control circuit* 193
 - Alarms* 194
- Functioning of a prototype ventilator* 194
 - Servo ventilator 900 E – Seimens* 194
 - Modes of ventilation* 195
- Critical care ventilators* 196
 - Bird Mark 7 ventilator* 196
 - Bird Mark 8 ventilator* 196
 - Bird Mark 7A/8A* 196
- Bird infant J circuit system* 197
 - Bird Mark 14* 197
 - Bird Mark 6* 197
- Bird Mark 4* 197
- Bird Mark 10* 197
- Bear cub 750VS infant ventilator* 197
 - Mini-bird ventilator* 197
 - Manley ventilator* 197
 - Blease pulmoflator* 198
 - Barnet ventilator* 198
 - East-Radcliffe ventilator* 199
 - Harlow ventilator* 199
 - Cape minor ventilator* 199
 - Oxford ventilators* 199
 - Emerson volume ventilator* 199
 - Ohmeda 7000 electronic anaesthesia ventilator* 199

19. Noninvasive Ventilation 200

- CPAP* 201
- BIPAP* 202
- Interfaces* 202
- Nasal mask* 202
- Facial mask* 202
- Nasal pillows* 202

20. Equipment used in Pain Relief 204

- Transcutaneous electrical nerve stimulation therapy* 204
 - Physiological background* 204
 - Stimulator requirements* 205
 - Choice of stimulation mode and parameters* 205
 - Placement of electrodes* 205
- Patient controlled analgesia* 205
 - Introduction* 205
 - IV-PCA versus IM opioids* 206
- Peripheral nerve locators* 207
 - Technical considerations* 208
- Newer methods of opioid drug delivery* 208
 - Continuous transdermal delivery* 209
 - Continuous spinal opioid infusion (CSOI)* 210

21. Disinfection and Sterilization 213

- Pasteurization* 213
- Steam sterilization (autoclaving)* 213
 - Variables in steam sterilization* 214
- Problems with steam sterilizer* 214
- Equipment malfunction* 214
- Personnel errors* 215

22. Robotic Systems 216

Section 2: Drugs in Anaesthesia

1. Autonomic Nervous System (ANS)	221
2. Intravenous and Inhalation Induction Agents	226
3. Total Intravenous Anaesthesia (TIVA)	230
4. Neuromuscular Blocking Drugs	231
5. Local Anaesthetics	233
6. Opioid and Dorsal Horn Receptors	235
7. Opioids	237
8. Non-steroidal Anti-inflammatory Drugs	239
9. Drugs used in Systemic Conditions	241
10. Cardiac Glycosides	248
11. Hypotensive Agents	250
12. Drugs used for Thyroid Patients	252
13. Corticosteroids	277
14. Diuretics	279
15. Opioid Antagonists	280
16. Paediatric Analgesic Pharmacology	282
17. Drug Interactions	283
18. Pain Relief and Sedation in ICU	285
19. Hypoglycaemic Agents	286
20. Transfusion Medicine	290
21. Antibiotics	302

Section 3: Waveforms, ECGs and X-rays in Anaesthesia

1. Various ECGs	307
2. Ultrasound in Regional Block	319
3. Chest X-rays	333
4. Echocardiography	348
5. End Tidal Carbon Dioxide Waveform	350
6. Ventilator Waveforms	354
